PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

Easterling, 5, St. Mark's Road, Fulham Road, S.W.

CLUB REPORTS.

MORRISTON C.B.S.

Table Show of British Birds and Mules held May 25th. GREENFINCH: 1, Evans; 2, Taylor; 3, Morgan. CHAFFINCH, ETC.; 1, Taylor; 2, Poulet; 3, Evans. A.V. BRIT.: 1, Morgan; 2, Evans; 3, East. MULE: 1, Ware; 2, Jones. Mr. Harding Williams judged. D. JEREMY, Sec.

[Club reports and club notices should be sent on different sheets of paper.—ED.]

DERBY CAGE BIRD CLUB.

Half-yearly meeting held May 25th, Mr. W. H. Eley presiding. The chief business of the meeting was to receive nomination for young birds for the Jubilee Show in November next. This what may be called "speculating night," for owing to the ill-luck of some of the members up to date, they had to nominate birds before they are hatched. Nevertheless, the entry was satisfactory. Messrs. F. Andrews and A. Cratchley were elected members.

W. H. BAMSEY, Hon. Sec.

WIMBLEDON C.B.S.

Meeting June 3rd. Judging competition of British birds, Mr. F. J. Day acting as final judge. On comparing the competitors' slips, the result was found to be as follows:—Mrs. Griffiths, Messrs. Warley, Found, Tutty, Griffiths, Smith, and Lupton, 6 points each; Messrs. Nodder and Piper, 3 points each; Mr. Brooke, 2 points; Messrs. Archer, Brooks, Jordan, Carson, Rorke, Standage, Whittome, Porter, and Dyke, 1 point each; and Mr. Colman, nil. During the evening six new members were elected. The question of the Young Stock Show, to be held on Monday, July 1st, was discussed, and members were urged to send as many entries as possible.

W. H. COLMAN, Hon. Sec.

B.E.N.A. (DULWICH CENTRE).

The subject for the May At Home was "British Birds." Mr. C. Hawkins, of Norwood, read the paper, which was from an observant's point of view, as he does not keep cage birds himself. He commenced with the House Sparrow, and after giving his remarks on some 39 different birds, finished up with a description of a Kingfisher's nest. The room was hung with coloured plates, including those of CAGE BIRDS, which were much admired. Two volumes of 'Familiar Wild Birds" were used to illustrate the birds spoken of. After the paper, the members inspected the birds in the garden, which include Canaries, Crossbill, Bramblefinch, Linnet, Thrush, Blackbird, and Magpie, which are being kept on the open-air systems, with only a hood for cover. The Canaries, which have been out all winter, have only just commenced to build, being about four weeks later than last year. Returning to the house, tea was served, and a hearty vote of thanks was passed to Mr. Hawkins for his paper, which brought the At Home to a close.

J. ACUTT, Sec.

NATIONAL BRITISH BIRD AND MULE CLUB.

Committee meeting held at headquarters, May 30th. Present, Mr. Robson (chairman), Mr. Fnll-james (vice-chairman), Messrs. Maxwell, Silver, Goodchild, Dobson, Hathaway, Cooper, Dewhurst, Trower, Francis, Weston, Plumbridge, and Carr. Proposed by Mr. Dewhurst, seconded by Mr. Cooper: "That the allotting of medals for the forthcoming shows take place at the July meeting, and that all applications be in by that date." Letters were read from Miss Ashford and Messrs. Dale, Lott, and Rouse. Proposed by Mr. Lott, seconded by Mr. Cooper, that Mrs. Hamblyn, 117, Millbrook-road, Southampton, become a member of the club. A letter was read from the sub-committee re the birds they recommended to be added to the club's British bird list. This brought forth much discussion, and some very strong arguments. The chairman put to the meeting each bird to be voted upon individually, which resulted in the following birds being added to the list:—Crested Tit, Woodchat Shrike, Turtle Dove, Ring Dove, Stock Dove, Rock Dove, Common Quail, Golden Plover, Kentish Plover, Ringed Plover, Lapwing, Dotterel, Turnstone, Dunlin, Knot, Ruff, Reeve, Sanderling, Common Sandpiper, Redshank, Greenshank, Swallow, House Martin, Sand Martin, Nutcracker, Golden Oriole, and Hoopoe.

PLUMBRIDGE & CARR, Hon. Secs.

NORTHAMPTON HAND IN HAND C.B.S.

Meeting May 28th, at Foresters' Arms. It was decided to hold the Annual Show, December 27th, 28th. Twenty-six classes arranged. The Cage Bird Union question was discussed. Eventually it was decided that the Society withdraw from same. Show of Young Birds will be held June 15th; all entries must be classed and paid for June 11th.

JNO. NASON, Sec.

BLAYDON C.B.S.

Meeting held June 1st. Schedule, as drawn up by committee for next Annual Show, was adopted. It was also decided to give £1 for most, and 10s. for second most points in open classes, as well as good specials for each class. We have every reason to believe it will draw an even larger entry than usual from our many patrons. Mr. J. W. Taylor, of Newcastle, was elected a vice-president.

D. A. OGILVIE, Hon. Sec.

ORMSKIRK AND DIS. C.B.S.

Meeting held 3rd inst. Mr. Thos. Johnson gave a most efficient exhibition of the art of washing cage birds. There was a good muster of members, who took a keen interest in the proceedings, especially the lathering process, which the old veteran fully explained as he went along. The colour of the second bird to undergo the bathing process resembled that of a crow rather than a Canary, and Mr. Johnson remarked it had never been washed since it was hatched, but when it emerged from the drying box there was ample proof of the masterly manner in which the brush and soap had been used. A hearty vote of thanks was accorded Mr. Johnson. The date of the Young Bird Show was altered to July 13th.

T. H. TIPPEN, Hon. Sec.

THE LANCASHIRE AND LIZARD F.A.

The L.L.F.A. meeting at Cluskey's Rooms, Glossop, on June 2nd, before a large attendance of members and friends. The agenda included the show cage question. One of our members, Mr. J. Hampshire, of Cowper-street, Oldham, was appointed the maker. The Lizard show cage is to be left plain inside, so that the purchasers can enamel their own. All enamel is to be got through the Secretary, to enable all cages to be perfectly the same tint. Several other items were dealt with, after which Councillor S. R. Compston, of Macclesfield, gave a lecture on "The Lancashire Canary." High credit is due to the lecturer for the able manner in which he described the different points in the Lancashire Canary. Discussion followed, which Mr. Compston handled in a masterly manner. The usual vote of thanks to the lecturer brought a most interesting gathering to a close.

H. OLIVER, Sec.

GLASGOW AND W.C. NORWICH, M., B. & F.B.C.

Monthly meeting held May 25th.. The President presided. The following gentlemen were admitted to membership, viz., D. Smith, J. Nimmor, D. Hamilton, R. Condie, J. Whitelaw. The classification for Annual Show was drafted, and will be confirmed at next meeting. Judges were also nominated, and will go through the same process on June 29th, all business relating to show will be decided on that date. Monthly Show, Messrs. A. McFarlane, H. Riley, T. Dick, and J. Young judged. YELLOWHAMMER: 1, Brownlie, well-known winner, needs no comment; 2, Henderson, rare stamp, presses hard, with a well-defined head; 3, spl, Lawson, grand head, very steady; 4, Lawson; vhc, Malcolmson; hc, Roulstone; c, spl, Gadesden. A.O.V. BUNTING: 1, Lawson, good Snow Bunting, nicely staged; 2, Martin, splendid Reed Bunting, shown in A1 condition; 3, Lawson, Cirl Bunting, shown in faultless trim, greatly admired; 4, spl, Roulstone, Black-headed Bunting, good 'un; vhc, Gillies; hc, Johnstone; c, Adam. SMALL BRIT.: 1, Malcolmson, grand Yellow Wagtail, steady as a rock, an easy win; 2, Pettigrew, good Shore Lark, staged to perfection; 3, Adam, Swallow, good specimen; 4, Martin, Wheatear, splendid exhibit, grand colour; vhc, Stewart; vhc, Stewart; hc, Gillies; c, Hayes. LESSER REDPOLL: 1, Martin, Scottish National winner, looking as well as ever; 2, Shearer, nice exhibit, best of hihs; 3, Gordon, lively little "Poll," deserves his position; 4, Connelly, splendid hib, grand condition; vhc, spl, Brownlie; hc, spl, Henderson; c, Rodie. This was a champion class, and many good birds stood cardless. Next meeting June 29th. 1. Light Mule or Hybrid. 2. Dark Mules. 3. Large British. 4. Foreign Birds.

GARSTON B.B.A.

Meeting held May 15th, Mr. A. E. Crawley in the chair, who called upon Mr. Alf Thompson to open a discussion on "The Rearing and Feeding of Young Birds." Mr. Thompson, in his opening remarks, emphasised the fact that what he was about to say on the subject was from experience gained in his own bird room, and not taken from any books. Commencing, he wished the members present to understand that to be successful in breeding special attention must he taken regarding the treating of the hens from the completion of the nest to about the second week in March. He advocated a plain seed diet, with a little sweet apple two or three times a week, and not forgetting the bath on bright days. Just about a fortnight before pairing up he began to give them a little generous food, in the shape of egg meat; he uses Spratt's Patent Cod Liver Oil Food. During incubation he never allows the birds the bath, his opinion being that there was a tendency for the eggs to be chilled, but could with every confidence recommend a system he had practised for a great number of years, viz., on the thirteenth day to take the eggs out of the nest and holding for a few seconds in his mouth, and returning same, and he was very pleased to say that he was very rarely troubled with young dead in shell. On the evening of the thirteenth day he gave a little richly-made egg food, continuing with same until he saw that the hen was feeding satisfactorily, afterwards adding more biscuit to the egg. On the fourth day after hatching, in addition to the egg food, he gave crushed hemp and rape, with a little dandelion (three times a day), also added to the water 3 or 4 drops of Parrish's Chemical Food, which he had proved to be very beneficial. When the young birds were separated from their parents he supplied them with crushed hemp, and always put the seed box on containing good wholesome Spanish canary seed, and a supply of water with Tincture of Gentian, and when they were able to fend for themselves he transferred them to a single box cage to be put through their drill if required for Nest Feather Shows. With these remarks the lecturer closed, and thereupon the chairman threw the meeting open for questions, and needless to say many useful hints were gathered, both by the champions and novices, by the interesting discussion which followed. A hearty vote of thanks was duly accorded to Mr. Thompson for the masterly manner in which he had handled his subject, and Mr. Thompson suitably responded.

A. WILKINSON, Hon. Sec.

CROOK ORIGINAL C.B. & R.S.

Meeting held June 1st. Mr. H. Dixon presided. It was decided to hold our meetings on first Wednesday of month, instead of Saturday, at 7 p.m. Mr. J. H. Talt was elected vice-chairman. Four specials, given by members, for Table Show; also eight stewards appointed. Judges, Messrs. G. Sweet and F. Feltham. Eighteen new members enrolled and six nominated. The proceeds of Table Show to go towards purchasing two cups for Open Show.

A. BOWES, Sec.

CAMBRIDGE AND CAMBS. C.B.S.

The above Society brought their winter programme to a most successful close on May 29th with a discussion on "The Management of Cage Birds," opened by Mr. C. Green (Chesterton). Mr. Green, in a very lucid manner, explained the cages he used, how he prepared birds for breeding, the food he gave them, and all the details required to command success in the bird room. Messrs. Brooks, Bateman, Rogers, Moore, Linsey, Young, Gifford, Bye, etc., also carried on the discussion. A resolution, thanking Mr. Green for his paper, was proposed by Mr. Moore, seconded by Mr. Bateman. Two new members (proposed by Messrs. Young and Brooks), Messrs. Williams and Austin, were elected.

T. S. MOORE, Hon. Sec.

SCOTTISH NORWICH PLAINHEAD CLUB.

Mr. J. Sandiford (Colour Food King) has, for the second year, presented the Scottish Plainhead Club with a £5 5s. challenge cup for competition amongst the members of the club. Those who had the pleasure of seeing last year's cup, know it is worth trying for. I shall endeavour to have the cup on exhibition at each show where patronage of the Scottish Plainhead Club is given. All Norwich fanciers who wish to compete for this cup must join the Scottish Plainhead Club, annual fee, 2/6 each person. The club are also giving two gold medals for the best young cock and best young hen bred 1907, in addition to the many other advantages of the club. Mr. Jas. F. Dewar has been selected cage maker to the club. Members wishing show cages are requested to get them from him. All cages will be stamped, so that any dispute about colour and make of cage can be traced. Will members kindly send on their subscriptions, which are now due? Those competing for Sandiford's cup are requested to use his colour food. D. SMITH, Sec.

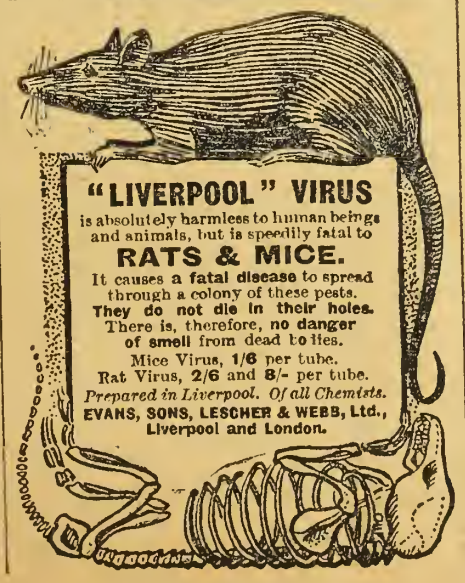
142, High Street, Edinburgh.

THE CINNAMON CANARY CLUB.

A Circular to Members.

Your votes upon the proposed deletion of Rule 17 of the Cage Bird Union are requested, also the definition of a Novice, one that will govern all Open Shows. I most sincerely hope you will give your most cordial support in favour of Rule 17 standing by placing Yes against it. I have weighed up all that has been written against Rule 17, and I can come to no other conclusion than that petty jealousy and spite are at the bottom of it all. It is the opinion of many old fanciers in London, and of myself, that the Union should be upheld by every society and club in the Fancy, and strengthened in every way. If this rule is struck out, many societies will drop out. Some here have openly said so. What will happen then? These shows will be open to receive entries from any disqualified persons and other undesirables for the benefit of their own coffers. Again, the opposition in London is in a great measure due to the success of the Union, and the failure of the Cage Bird Club, which the L.C.B.A. founded a few years ago. The whole power of the C.B.C. was centred in its founders, who tried to dictate to the whole Fancy from London. They were told at the time it would fail. Further, they gave away medals to he won by L.C.B.A. members. Another cry is "coercion." Why any rules of a society or union are coercive; take our own rules for example, Rule 10 on club cages is coercive. They have also circulated that the Union is run by Lythgoe, Ramsden, and CAGE BIRDS. Did you ever hear such arguments? Now, I want your instructions as to whom I shall elect upon the Executive Council. Mr. Ramsden has declined to stand this year owing to the pressure of business. The district in which we are located is No. 11. London and Home Counties North of the Thames is represented as follows:—City and Suburban, A. W. Curtis. London C.B.A., J. Tyson. L.P.O.S., J. W. Ramsden. London and Counties, E. Pretty (who will not stand). North London, W. O. Morris. West London, J. Dewhurst. British Roller C.C., J. W. Norris. Cinnamon C.C., R. J. Pretty. Watford C.B.S., R. J. Watts. We must have a stronger Council. The late Executive's decision on the Green disqualification has not strengthened the Union. It has had the reverse effect. Let us have men who can be courageous enough to say whether a judge or exhibitor is right or wrong. We want no half-way decisions upon such cases that are referred to them for settlement. Of the delegates named the following are against the Union in any shape or form: Messrs. Tyson, Dewhurst, Curtis. Please return your voting card on or before Thursday next, as the result must reach the Secretary by the 8th inst. I should be glad to receive any subscriptions for the current year.—R. J. PRETTY, Hon. Sec.

[Mr. Pretty's reference to CAGE BIRDS and the Cage Bird Union is replied to under his letter upon Rule 17, replying to Mr. Tyson.—ED. "C.B."]



"LIVERPOOL" VIRUS
is absolutely harmless to human beings and animals, but is speedily fatal to
RATS & MICE.
It causes a fatal disease to spread through a colony of these pests.
They do not die in their holes.
There is, therefore, no danger of smell from dead bodies.

ILLUSTRATED IDEAS

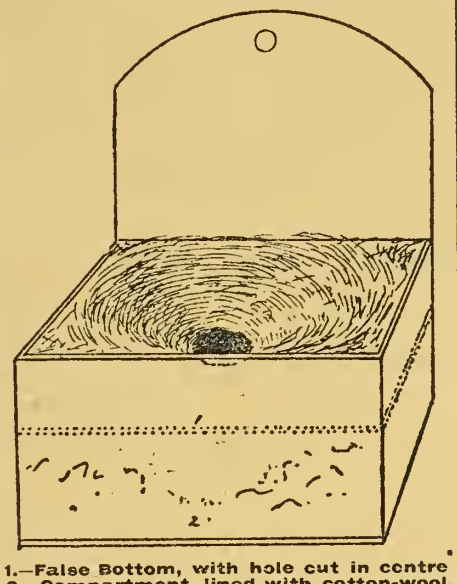
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 107.

NEST-BOX FOR EGG-EATING HENS.

Sent by W. H. Baker, 6, Cambridge Street, Mansfield, Notts.

I had a hen this year eat the whole of her first nest of eggs. I did not mean her to eat the second, so made a nestbox like the enclosed sketch, and the dodge came off, with the



1.—False Bottom, with hole cut in centre 2.—Compartment, lined with cotton-wool, into which egg falls.

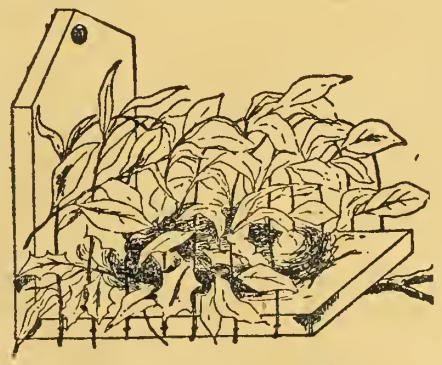
result that I hatched out all her eggs under another hen on May 18th. Get a deep wood nest-box, and fix in a removable false bottom with a hole large enough to let an egg fall through on to a bed of cotton wool placed underneath. Let the hen build her nest in the ordinary way, and make a hole in the bottom of it just before the eggs are due.—W. H. BAKER.

No. 108.

NEST FOR HYBRID COUPLES.

Sent by W. R. Smellie, M.A., Mayfield, Messend, N.B.

I enclose a drawing of a nest box which I have used with good results. I at first hung up three in my aviary. A pair of Greenfinches appropriated one, and built therein, while two Goldfinch Mules, paired respectively to a Canary and a Twite, have built beautiful little nests in the other two, and all three are on the point of laying. I will use the Mules as foster parents. Two days ago I hung up a fourth nest, and already a pair of Bullfinches are casting longing and businesslike eyes upon it. Hung in a dark place, close to the roof, and masked with twigs, a pair of good-conditioned birds cannot withstand its allurements. I find that small foreigners (Avadavats, etc.) like to roost and secrete themselves among the dense twigs at the top of these nests.



Nest for Hybrid Couples.

I make a hole for hanging nest on nail. The twigs are willow, bent round and fastened to board at each side by staples, or bent nails. A small piece of a branch at the entrance makes an excellent perch. The framework is made out of pieces of ½ in. board, about 6 in. square. The upright twigs should be interwoven with other twigs, preferably green twigs, i.e., ivy, holly, etc. The curved twigs do not lie so very symetrically, but as regards this, I think the rougher and more natural-looking it is the better. For the sake of clearness I have shown in the sketch fewer twigs than there are in the real article.—W. R. SMELLIE.

BEGINNERS: You MUST read the ANNUAL.

SEND FOR
Cage Birds
= Annual =

And you will be delighted beyond expression at the value received.

Never was the bird keeper better catered for in respect of birdy literature than he is to-day, and nowhere can you find a handier, more practical, or complete guide to the hobby of cage bird keeping than I offer in CAGE BIRDS ANNUAL.

Listen to this conversation between a beginner and our publisher:—

Publisher.—Take one of our ANNUALS, Sir?

Beginner.—Not I. What do I want with an annual? I've got the weekly.

Publisher.—Without disparaging the weekly, Sir, the ANNUAL is a totally different publication. The ANNUAL is a handy work of reference. You find its value right throughout the year. You never know when it may come in handy—save a bird's life or give you exactly the item you want to know.

Beginner.—Will it tell me if there's a club in my district?

Publisher.—Yes. Here is a complete list of clubs, the names and addresses of the secretaries, fees, etc.

Beginner.—Yes; that's all right, but if there's something I can't understand—some technical term, for instance, will it explain that?

Publisher.—That's just where its value comes in. See the Glossary of Fanciers' Terms.

Beginner.—By George, that's handy! Will it also tell me how to breed Canaries?

Publisher.—Certainly! And also how to breed Mules and Hybrids. There is also a chapter on keeping a pet bird, and a most useful article by Mr. Sam Drake on "Rearing Young Canaries."

Beginner.—I think I'll take a copy. Stay, though, I'm not only going in for Canaries; I may take up foreign birds.

Publisher.—Then you ought to read Wesley T. Page's chapter on "Some Pleasing and Beautiful Foreigners."

Beginner.—But suppose any of my birds become ill. Where shall I find this ANNUAL come in then?

Publisher.—Just where you want it, Sir. The chapter on diseases is arranged in alphabetical order, and is most comprehensive in character.

Beginner.—It certainly seems a valuable idea.

Publisher.—Valuable! It's worth its weight in gold. Why look here, Sir, in addition there's a chapter on "How to Identify the Call Notes and Song of British Birds," a review of the exhibition year, a breeding register, a show record, a cash account, a list of cage bird judges' names and addresses, a list of the bird trade, a list of breeders and exhibitors——

Beginner.—Stop! stop! man; give me a dozen copies. I'll take them away and distribute them to friends as a public duty. However it's done for the price I can't see. Look here, pack up every blessed book you publish, and let me know how much you want from me.

Publisher.—Thank you, Sir; always ready to oblige. You see, we publish our ANNUAL as an advertisement.

THE SEASON'S COLOUR FOODS.

Reports on Samples.

Pre-eminent amongst the firms of those who cater for the needs of bird lovers and keepers stands the well-known house of Spratt's Patent, Ltd. For many years have they been quite in the front rank as fanciers' specialists, and whether it be in foods, utensils, aviaries, or anything else desired by a bird keeper, Spratts can and will supply the need of the moment. Just now many minds are turned towards the subject of colour foods, and here the firm of Spratts are well to the front, and not only do they cater for the exhibitor who needs great depth and richness of colour in his bird's plumage, but also for the ordinary bird lovers, who, whilst not desiring the gaudy hues beloved of the exhibitor, yet like to improve in some degree the natural depth of tone in the plumage of their pets. Spratts' Red Colour Food is prepared from the very best sample of natural pods that can be procured, is singularly free from any admixture of foreign matter, is most carefully and perfectly prepared, and is most suitable for use by those who require to exhibit their Canaries. The firm's Orange Plumage Colour Food is prepared especially for the use of those who wish to make "Dickie" look a little bit brighter in colour. Above and beyond this, however, it is just the article for the use of exhibitors who make a practice of colour feeding such birds as Siskins, Greenfinches, Yellow Buntings, Yellow Wagtails, etc., to whom the tasteless and hot peppers are not of much service, owing to the fact that they make the colour too deep. To such as these Spratts' Orange Plumage Colour Food comes as a real friend in need. It does just enough, and not too much. It is a beautiful rich orange colour, and is composed of the purest, most harmless, yet most powerful ingredients that are known to improve the colour of birds. Spratts' Colour Foods are prepared so as to be used in conjunction with their Canary Food, and so used have the great charm of simplicity in preparation with effectiveness in results. Both the Red Colour Food and the Orange Plumage Colour Food are put up in 6d., 1s. and 2s. 6d. tins, and may be obtained from the agents of Spratts' Patent, Ltd., in almost every town and village in the kingdom. No douht the firm would be pleased to forward samples to anyone sending a post-card to 24 and 25, Fenchurch Street, London, E.C., asking for the same.

LONDON SECRETARIES NOTE.

Re the uniform definition of a novice and amateur for members' shows within the Metropolitan Police area, will secretaries of all cage bird societies within the above area kindly forward a copy of their rules containing their respective definitions, as it is desirable that none should be overlooked? This, of course, does not apply to the large numher that have already sent.—J. W. RENNIE, the Royal Hotel, Mile End Road, E.

POTTERIES AND DIS. C.B.A.

At a meeting of our society, held June 1st, to discuss Cage Bird Union matters, it was unanimously decided by our members to give their vote in favour of Rule 17 remaining as at present, as they consider that the Union would be of no use whatever without it. They were also in favour of definition No. 4 of a novice.—J. SIMCOCK, Scc.

LONDON AND COUNTIES A.C.B.

The London and Counties A.C.B. decided in favour of Rule 17 at a special general meeting held on Thursday last, May 30th, by 16 votes to one, the dissentient being against because the rule does not prohibit non-affiliated members from showing at Union shows. The meeting also decided unanimously in favour of Novice definition 4.

WATFORD AND DIS. C.B.S.

The Watford and District C.B.S. committee, on June 3rd, unanimously decided in favour of Rule 17 standing. One newly-elected member, at the adjourned general meeting last week, sent his resignation to this committee because the whole of the members at the said general meeting spoke in favour of the rule standing. The resignation was unanimously accepted.

CHESTER AND DIS. C.B.S.

A meeting was held on May 28th to consider Rule 17. There was not a very large attendance. Mr. H. Stovin was elected to the chair. A very animated discussion took place, and it was eventually carried by 11 votes to one that the whole of the rule stand. Mr. Lythgoe having asked for suggestions to be laid hefore next meeting of the Council of the Union, it was decided by a large majority to forward the following suggestion as an addition to Rule 17:—"That entries for open shows be not accepted from anyone not a member of an affiliated society or an associate memher of the Union." No. 5 novice definition was chosen.—ALFRED J. RED, Hon. Sec.

THE CAGE BIRD SECTION AT "MIXED" SHOWS.

SIR,—I shall be glad if you will allow me to refer to Mr. Lythgoe's letter in support of retention of Rule 17 of the C.B.U. rules, and quoted in your issue of 18th ult. The clauses of that letter attacking mixed shows seem to me to be very sweeping, and while there may, in some cases, be some justification for the remarks, such wholesale condemnation may arouse prejudice and do injury where least deserved. I think the following facts will prove that it should not be applied to the Bristol Fanciers' Association. In our own case each section has its own superintendent and committee, and the general committee consists of these sectional committecs combined. Each section drafts its own classification and recommends its own judges. It follows, therefore, that if the cage bird section were considered a secondary branch of the show, it would be, probahly, the fault of the cage bird men themselves. But the case with us is quite the reverse. The recommendations of the cage hird committee have always been adopted without amendment in any particular. The cage bird classification has been a gradually increasing one, and I have reason to helieve that there will be a further increase in classes provided this ycar. Our hall last year cost us just upon £40 for a two-days' show, and the best part of the hall is always allotted to the cage bird sectiou, and special staging is always erected for same. The Association possesses silver in the shape of challenge bows and cups to the value of ahout £80. Of these, five bowls and a cup—total value £60—are competed for in the cage bird section, as against a value of about £20 in all the other sections combined. All the five howls are for open competition, and only the cup confincd to members. In addition to these, three bowls—each value £10 10s.—have been won outright in open competition in the cage hird section. Notwithstanding our heavy rent and losses almost year by year (last year we lost £36), we have always paid full prize-money, which has meant personal subscription hy ourselves, and have always set our faces strongly against amalgamation of classes. As a new officer I may, with all modesty, say that the management of our show in past years has heen highly praised.—G. T. H. MAGGS, Hon. Sec. Bristol F.A.

DERBY CAGE BIRD CLUB.

The much-vexed question, Rule 17 of the Cage Bird Union, came before the half-yearly meeting on May 25th. After much discussion it was proposed by Rev. S. Lawton Platt, seconded by Mr. W. Astle, "That we are not in favour of the latter part of Rule 17, and at the same time wish to make our protest against the manner in which the vote is heing taken, considering that the spirit of the resolution passed at the Crystal Palace was that the aggregate vote of all affiliated members should be taken." This was carried unanimously. The members thought it mattered little if the gentlemen clubs add to such a rule, hut it should not govern working men's cage birds societies; also that it aims at putting down genuine working men's shows in villages or small hamlets if they do not swallow Rule 17 of C.B.U.—W. H. BAMSEY, Hon. Sec.

GATESHEAD AND DIS. C.B.S.

Meeting held May 29th. Our delegate's report of the C.B.U. District meeting was read (as Mr. Brown was unable to be present), and a resolution was carried that the secretary bo instructed to write for further particulars regarding Messrs. Taylor and Sanderson's case. Rule 17 of the C.B.U. then came on for discussion. The secretary having read the letter attached to voting paper, a good deal of discussion took place. Eventually a proposition was put to the meeting: "That the part of Rule 17 referred to be deleted." This was seconded. An amendment was then proposed that Rule 17 stand as at present. This was seconded by one of the members, as he said, to test the meeting, although he would vote against it. The proposition was carried, 17 voting for it. On the amendment no one voted, four or five members remaining neutral. The novice question was then dealt with, and came in for a good deal of discussion. Definition 2, where it referred to the hirds being bred by the exhibitor, came in for a good dcal of favour, but objection was taken that otherwise a novice had not much encouragement in this definition, as a prize in open meant a 1st, 2nd, 3rd or 4th. A vote was taken, and the majority were in favour of No. 3 definition.—T. TAYLOR, Sec.

Mr. R. J. PRETTY REPLIES.

SIR,—I must protest against Mr. Tyson's action in deliberately misquoting my statement, made at the L.C.B.A. meeting to bolster up his petty, spiteful argument against Rule 17. He says that Mr. Lythgoe gave me and others permission to show at Watford Show. This alone is disproved by your report of the meeting (which is perfectly correct). In order to further disprove his statement, I quote Mr. Lythgoe's letter to me in reply to mine upon the issue of a licence for the West Herts Fanciers' Association Show in December last:—

The Cage Bird Union,
25, Stamford-street,
Old Trafford, Manchester.
November 28th, 1906.

Dear Mr. Pretty,—In reply to your letter of yesterday, license can he granted to the West Herts Association to hold their Show on Decemher 12th, under the Union's rules if you wish it—the date does not clash with any other in your district. To get over the difficulty of the rules not heing sent out with schedules, a copy should he sent to all exhibitors of cage hirds with their labels. You, yourself, and any other members of the Association would have heen quite in order in showing, but the members of Watford C.B.S., not members of the West Herts Society, would not have heen in order in showing, so that it is hetter to have a license.

Now, sir, where does Mr. Lythgoe's permission come in?

I spoke from memory, and I think this letter proves what I said was perfectly correct. This is not the first time that Mr. Tyson has deliberately served me this dirty trick; in fact, he seems to serve others the same to suit his own purposes. Again, in a former letter, he said that a society of 20 members only pays 3s. 4d. as an affiliation fee. What a pity he did not read and digest Rule 4 as well as he he has done 17, and he would see that the minimum fee is 5s. He also complains about the voting for officers. Perhaps he would like it arranged the same way as was the Crest Club election of officers last year. Mr. Tyson also complains about the equality of his vote. What has he to grumble about when he has himself and two of his members on the same District Committee? I say he has the preponderance there, and if he had the same on the Executive I suppose he would be satisfied. This would-be "Tammany Boss and Gang" tried to dictate to the Fancy a few years ago, when they formed the Cage Bird Club. They then threatened to wipe out all those who did not join it. We are still here, but the Cage Bird Club is not. Its failure was because the whole power was invested in this "Tammany" crew, who tried to govern the whole Fancy from London. Anyone can see that all Mr. Tyson's arguments are founded upon petty jealousy, spite, and malice, because the Cage Bird Union has attained such success. Let us hope it will continue to he successful, in spite of "Tammany's" cry that it is run by Messrs. Lythgoe and Ramsden, and I only heard in Watford last week that CAGE BIRDS has a hand in it. Mr. Tyson says he will continue to play. Well, it won't hurt us if he does. But let him play the game, and not the fool.—R. J. PRETTY.

[We hardly think such a statement as that referred to by Mr. Pretty, viz., that "CAGE BIRDS has a hand in the C.B.U.," deserves contradiction. We take this opportnnity of emphasising the fact that our policy from the start has heen absolute independence and freedom of interest.—EDITOR "C.B."]

Use our Picture Postcards.

Mr. STEPHENSON REPLIES.

SIR,—Notwithstanding Mr. Tyson's figures, I still hold his previous letter was misleading. He writes: "May I respectfully point out the injustice of voting on this question by the elected delegates only?" Now, the elected delegates, in their official capacity as delegates, were never asked to vote on the question at all. The secretary of each society has, I think, received a voting paper, with a request to call a meeting of his particular society, and to take a vote of the members on the question; the delegate will only record his vote, one way or the other, with the rest of his fellow members. Again, Mr. Tyson writes: "Why are the delegates not apprised of anything pertaining to their particular society? They are the representatives, and not the societies." They are the representatives of the societies, not of the Union, and where the delegate does not happen to he the secretary of the society he represents, he has nothing whatever to do with calling society meetings. If he did call a meeting, I should think the secretary would very soon explain to him his position.

Mr. Tyson asks, "Is it not true a delegate can and has been deputed to police his own show?" The district committees appoint the show visitors in their own district, and if this is not done in a proper manner, it can hardly be laid to the blame of the Union. Why not send in full particulars to the C.B.U. secretary, and have it looked into, not save it up for a side slap at the Union in his correspondence? Is Mr. Tyson, as a delegate, doing his duty? I think not. To go back to his letter of May 18th. He states he represents a society of over 120 members, and complains his vote is only equal to another of his fellow delegates representing 20 members. Yet when his society of 120 members, at a (as reported) well-attended special meeting, take a vote on such an important question, they cau only total up 22 votes. I hold his fellow delegate represents a more enthusiastic band of fanciers than does Mr. Tyson, and that he will find a much better percentage of votes in the smaller society. Of what use are all your paper members, Mr. Tyson? I agree that it would be better for each society to send in the results of the voting, and a decision arrived at from the grand total. Even then, I think, there should be a majority of two-thirds in favour before any alteration is made. I might say our society sent in the result in this manner.

Mr. Tyson's objection to the formation of the provisional committee is frivolous. This committee was, I think, formed to the best advantage. I am under the impression I know the two he speaks of as having been elected without a word from their societies. If I am right, one is still on the Council, or was until recently. They were selected in order to make the committee as representative as possihle, and I think clearly shows there was no clique, hut a genuine endeavour to make the Union popular. Mr. Tyson warns all societies to be careful in voting—the explanations are so vague. One he knows said yes when he should have written no. What a lot of ignorant men we fanciers are! How thankful we should be that Mr. Tyson condescends to light our path, and give us the benefit of his intellect! There is no knowing into what errors we should fall if he withdrew into his shell and allowed us to go on our own sweet, irresponsible way. How clear Mr. Tyson is in the following: "I have a list of delegates from which I am requested to elect a representative on the Executive Council"! One word in that senteuce is absolutely misleading—"elect." Now, Mr. Tyson cannot "elect" a representative, and never could. Mr. Tyson may nominate, Mr. Tyson may vote; but the rest of the delegates in Mr. Tyson's district will see to it he does not elect. They also will have a vote, and he will have to "come down" to the level of his fellow delegates.

I would like to give Mr. Tyson the startling information that during the past few years quite a number of people have taken up their residence in Yorkshire who are not "Tykes." Curious, is it not? Probably I am not as old as Mr. Tyson, but I hope when I arrive at Mr. Tyson's mature age of wisdom I shall not have lost the instincts of a gentleman, or indulge in such cheap sarcasm, wit, humour, or whatever he calls it. C. R. STEPHENSON.

WIMBLEDON C.B.S.

Meeting held June 3rd., Mr. W. H. Stoakley in the chair. There was a very good attendance indeed.

After some little discussion, it was decided nem. con. to continue the affiliation of the society to the Cage Bird Union, 18 voting for, and the remainder of those present heing neutral. Then followed a discussion with reference to the latter portion of Rule 17 of the Union, on which they had asked the various societies affiliated to them to give an opinion. The portion of the rule referred to prevents registered members of the Union from showing at shows not licensed by the Union on pain of suspension. This, it was contended, pressed somewhat heavily on those cage bird fanciers who supported the Union, inasmuch as, although they could not show at unlicensed shows, those who gave no support to the Union could exhibit at any show, whether licensed or not. In the end a vote was taken, and it was decided by 16 to 6, the others not voting, that the society was not in favour of retaining the portion of the rule as it at present stands. They, however, decided by 21 to one, the others not voting, to instruct the secretary to write to the Uuion to say they were in favour of the retention of the rule, if an addition was made preventing non-registered fanciers from showing at licensed shows. Five definitions of a Novice were submitted by the Union for the Wimbledon and other societies affiliated to select one which they thought best, and, after some little discussion, it was decided to accept definition 5, which defined a Novice as one who has never won three first prizes in open novice, amateur or champion classes.

IN THE COURTS.

LAYING POISONED GRAIN.

R. Bullen was charged before the Fakenham Court recently with laying poisoned grain, and J. P. Case was charged with causing such grain to he laid upon the land. Mr. Jewson said Bullen was in the habit of going about the country laying poisoned grain for the purpose of killing birds. He was a professional poisoner of birds. He first fed them and then afterwards gave them the poisoned grain, and in this instance he was informed that a barrow full of dead birds was picked up the next morning. The matter was a serious one, and must he put a stop to, there being no justification for such wholesale poisoning. It was not a dishonourable charge with which Mr. Case was charged, and although the R.S.P.C.A. were determined to put this illegal practice down they had no wish to be vindictive. Mr. F. Sutton said upon analysing the grain he found sufficient strychnine to kill hirds. The effects of a dog eating poisoned birds would be to cause death, and to human life it would be very dangerous. Defendant stated that he had eaten thousands of poisoned hirds but had not suffered therefrom. His family had also eaten them. Mr. Butcher said Case had known the defendant for several years, and had employed him to destroy hirds upon his farm, and had no idea whatever he was breaking the law. Bullen was fined £1 for three offences, and costs 12s. 6d., towards the costs. The defendant having refused to pay was sent to prison for fourteen days. In the other cases J. P. Case was fined 5s. and £1 3s. 8d. costs, A. Joice 5s. and £1 3s. 8d. costs, and R. Long 5s. and 18s. 8d. costs.

As many wooden labels attached to the small plants in the City Park kept constantly disappearing, the Truro Corporation issued numerous and solemn warnings to young children who were in the habit of frequenting the park. Still the wooden labels kept disappearing with the utmost regularity, and it was only due to the fact that the roof of a neighbouring place of worship was in need of repairs that the mystery was solved. The wily Jackdaws had utilised the wooden labels to make their nest.

The finest value in a Canary Book ever offered to the public.

CLAUDE St. JOHN'S

CANARY BREEDING

FOR BEGINNERS.

PRICE - SIXPENCE.

Originally published in 'Cage Birds' under the title of

"First Steps in Canary Breeding."

ILLUSTRATED 116 PAGES ILLUSTRATED

A thoroughly practical up-to-date Guide to the cult of Canary Breeding. Specially designed for the use of the Beginner in the Hobby. All about Cages (single and double breeders), Perches and other fitments, Seed-Boxes, Water Vessels, etc.; the Birdroom, the Bath, First Principles in Mating, Pairing-up, Signs of Breeding Condition, Building the Home, the First Egg, Removing Early Eggs, Incubation, Egg Food, etc., etc.

QUITE A BULKY LITTLE VOLUME. Postage 1½d.

Copies, post free, 7d.

"CAGE BIRDS,"
154, FLEET STREET, LONDON.

THE FIRST FEATHERS OF 1907.

BOLTON WOODS C.B.S.

This show was held at the Victoria Hotel, Bolton Woods, on June 1st. Forty-two birds were staged. Mr R. Halliday gave the awards with every satisfaction. YORKS., YELL.: 1, 2, spl, Dykes; 3, c, Firth; 4, Martin; vhc, hc, Brook. BUFF: 1, Shepherd; 2, Boocock; 3, 4, vhc, spl, Firth; hc, Hutton; c, Dykes. TKD., ETC., YELL.: 1, 3, spl, spl best bird in show, Shepherd; 2, vhc, Dykes; 4, Boocock. BUFF: 1, 4, spl, Dykes; 2, Hutton; 3, vhc, Shepherd. CINNAMON MKD. YELL.: 1, vhc, spl, Martin; 2, Hutton; 3, Boocock; hc, c, Brook. BUFF: 1, Shepherd; 2, 4, spl, Hutton; 3, Brook. HEAVILY VARIEGATED: 1, spl, Hutton; 2, Dykes. SELLING, 12s. 6d.: 1, spl, Dykes.

LAISTERDYKE B.F.A.

The members of the Laisterdyke Bird Fanciers' Association held their first Show for the medal competition on June 1st, and considering the weather conditions, there was a fair entry. Some good quality birds were staged. Mr. W. Mann judged. YORKS. YELL.: 1, Morement; 2, Parker; 3, Pownall. BUFF: 1, Parker; 2, Morement; 3, Pownall; 4, Duckworth; vhc, Casey; hc, Hudson. TKD. YELL.: 1, 2, Hudson; 3, Pownall; 4, Langford; vhc, Duckworth. BUFF: 1, Morement; 2, 3, Casey; 4, Langford; vhc, Morement; hc, Hudson. CINN. MKD. YELL.: 1, 2, Parker. NOVICE YELL.: 1, 2, Shoesmith; 3, Broadbent; 4, Coates. BUFF: 1, 2, Swaine; 3, Shoesmith; 4, Broadbent; vhc, Coates. NOVICE TKD. YELL.: 1, Coates; 2, Broadhent. FOUL MKD.: 1, 2, 3, Swaine. BEST YELL. IN SHOW: Hudson. BEST BUFF: Shoesmith.

WINDHILL, SHIPLEY & DIS. O.S.

Held at the Blue Bell Hotel, on Saturday, June 1st. Mr. J. Broadley judged. YORKS. YELL.: 1, vhc, Armstead; 2, Denton; 3, Chippendale; hc, Towers; c, Smith. BUFF: 1, Denton; 2, Chippendale; 3, Drake; vhc, Armstead; hc, Towers; c, Leeming. TKD. YELL.: 1, Garnett; 2, 3, Leeming; vhc, Drake; hc, Smith; c, Drake. BUFF: 1, 3, Smith; 2, Garnett; vhc, hc, F. Drake. FOUL MKD.: 1, Garnett. SELL., 12s. 6d.: 1, Denton; 2, Garnett; 3, Smith.

CITY OF HULL.

Nest Feather Show (Members), June 3rd. NOR. YELL. (7): 1, vhc, Harland; 2, Pepper; 3, hc, c, Barwick. Competition keen. BUFF (4): 1, 2, Harland; 3, vhc, Pepper. NOVICE, YELL. (11): 1, McKay; 2, Mason; 3, Oliver; vhc, c, Spruit; c, Riley. Some promising youngsters. BUFF (8): 1, 3, Mason; 2, Walker; vhc, hc, Spruit; c, Riley. CINN. YELL. (3): 1, 2, 3, Pepper. CREST, NOVICE (3): 1, 2, Banks; 3, Spruit. CRESTBRED (4): 1, 3, vhc, Spruit; 2, Banks. YORKS. YELL., NOVICE (4): 1, Banks; 2, vhc, Oliver; 3, Kling. BUFF (9): 1, Prentice; 2, Banks; 3, vhc, hc, Lightfoot; c, Parks. GOLDFINCH, ETC. (11): 1, vhc, Stamford; 2, hc, Pepper; 3, Barwick; c, Parks. A.O.V. BRIT. (8): 1, hc, Pepper; 2, Walker; 3, vhc, Potter; c, Shindler. Some of these should be heard of later on. A remarkable show of 53 Canaries and 19 Britishers—72 in all.

BRADFORD (EAST) O.S.

Members' First Feather Show, June 1st. The entry was very good; some promising young birds were shown. Mr. W. A. Cowgill judged, and his awards gave satisfaction. The points gained at this show count towards the gold medals and other prizes that have been put up for competition at the Society's Shows this year. The entry of 62 averaged just over 10 per class. There was a good attendance of visitors to the show. The winners of most points were Mr. W. Crnise, 1; Mr. J. Farrar, 2; Mr. W. Stables and Mr. W. Laycock tie for third most points. YELL. YORKS.: 1, 2, c, Cruise; 3, Farrar; vhc, Chapman and Bateman; hc, Stables. BUFF: 1, e, Cruise; 2, Gelder; 3, vhc, Farrar; hc, Layeock. TKD., ETC., YELL. YORKS.: 1, 2, Cruise; 3, Greenwood; vhc, Hill; hc, Laycock; c, Wilkinson Bros. TKD., ETC., BUFF: 1, Stables; 2, Farrar; 3, Laycock; vhc, Wilson; hc, Northrop; c, Riley. CIN. TKD. YELL.: 1, Northrop. BUFF: 1, Hill.

W.C.O.S.

The First Nest Feather Show was held at Boro' Arms, Plymouth, on May 27th. The Society is offering for competition six silver goblets, one each section Yorkshire, Norwich, Crest and Crestbred, A.O.V. Mule, and British and Foreign, the winner of most points in the three Nest Feather Shows to be held May 27th, June 19th, July 17th, to hold cups for year, cup to be won twice to become property of winner, two birds only in each class to count. There was a record entry of 84 birds, the Norwich being the strongest with 32 in two classes. Mr. T. Dectle judged Norwich, Mr. Tope Yorkshires, Mr. Hamilton British and Foreign, Mr. Chenery Cinnamons. Members also turned up in record numbers, the room being full to overflowing. Mr. W. Spillman kindly gave a prize for amateur judging of Norwich from diagrams provided by himself. the winner being Mr. G. Harvey. Mr. Spillman then gave a very interesting explanation of the models, which was greatly appreciated. YORKS., YELL. (10): 1, 2, 3, 4, vhc, Bassett; hc, Tremlett; c, Reed. BUFF (3): 1, 2, Hamilton; 3, Bassett. NOR., YELL. (15): 1, Spillman; 2, Harvey; 3, Smith; 4, vhc, Ruse; hc, e, Tucker. BUFF (17): 1, Spillman; 2, Garland; 3, Blatchford; 4, Ruse; vhc, Harvey; hc, Brenton; c, Pope. CREST (10): 1, hc, Bavage; 2, French; 3, Ryden; 4, Haskell; vhc, Full; c, Hobbs. CRESTBRED (9): 1, vhc, Ryder; 2, Hobbs; 3, Bavage; 4, French; hc, Haskell; c, Full. CINS. (2): 1, 2, Pope. MULE: 1, Rapson. GOLD. OR BULLFINCH (7): 1, vhc, Snell; 2, 3, Tremlett; 4, Blatchford; hc, Harvey. LINNET, ETC. (5): 1, Beer; 2, Endham; 3, Blatchford; 4, Cope; vhe, Tremlett. A.O.V. (3): 1, 2, Snell; 3, Tremlett.

When the Swallows Return.

When the Swallows return to us, instead of seeing them skimming here and there with a swiftness greater than that of the cloud-shadows, we have to look twice to be sure that they are Swallows, so plodding is their flight. They rest and sit at ease in the home garden they have won by days of flight. The sun strikes them as they sit there, beaks settled into chests, bodies sunk close to the bough, a quiet gurgle of throat-music speaking of a content that conquers tiredness. The birds are absolutely tame, and we can admire them now, as we cannot when the summer activity is on them, the delicious scheme of their colouring—the bronze-gold of their throats, the whiteness of their breasts, the purple blackness of the long cloak that covers the back. The uniform seems to glow as freshly as when it left Africa.

SINGING CONTESTS.

Mr. Samuel Mayall, of No. 6, Carolline-st., Oldham, would like the names and addresses of the secretaries of the leading Linnet and Roller Societies having contests. No doubt the gentlemen concerned will communicate with him.

ACCRINGTON.

A Lark singing contest took place at Brown Cow on June 1st. There were 12 entries, ten minutes hanging. Sanderson, 9-56; Greenhalgh, 6-30; Greenwood, 3-30; Bury, 3-20; Robinson, 1-24; Bury, -50.
A. KNOWLES, Sec.

WIGAN.

On Saturday, June 8th, 1907, an All England Linnet quality singing contest will be held at the Bell Vue Hotel, Woodhouse-lane, Wigan, when the proprietor will give 15s. first prize, and five other valuable prizes for 1s. entrance fee. Twopence charged to hear the birds sing, to be returned in refreshments. Singing to commence at 2 p.m. A special prize will be given for the best time.—JAMES HARMER.—ADVT.

BLACKBURN.

The Blackburn L.S.A. held their cup contest June 1st at the Old Red Lion. Twenty-four birds competed, and the singing was of the highest quality. 1st, cup, gold medal, Dobsou; 2nd, Bentley; 3rd, W. H. Topping; 4th, Leeming; 5th, R. Topping; 6th, Rostron. The next contest will be the consolation on June 15th.—RD. HAYHURST, Sec.

RYHOPE.

Queen's Head L.A. held usual contest June 1st, when 20 birds sang for four prizes, given by the Association and Mr. F. Ashmore. There was a good attendance of visitors. Judge, Mr. D. Spencer; timekeeper, Mr. J. Cope; 1st, Cowey; 2nd, Cope; 3rd, Telford; 4th, Mason.—J. MASON, Sec.

SHEFFIELD.

At the Old Britannia, Attercliffe, on June 2nd, 18 birds competed for three prizes. There was a good company present, and some splendid singing was heard. Result: Robinson, 98; Fowlstone, 51; Watson, 50. Judges, Messrs. Bollington and Robinson.

SIR,—I see Mr. H. Allen, of Leeds, is advertising his bird as the holder of the time record. If he is alluding to the contest in March, when he came here and beat me, I must tell him that the score he did on that occasion has been "knocked into a cocked hat" since. I think it is a great pity we do not get our contests reported, as we are in the thick of the Linnet singing in this district.
FREDK. WATSON, Sheffield.

LEEDS.

Sir,—Allow me to let readers know how it was my bird was beaten. I have been offering a medal since last December to anyone who could bring a bird to beat mine. I have had a great many visitors during the holidays to hear him, therefore I had him singing all the time. He also won the contests on May 19th, and ran away with the annual contest on May 20th. My bird being very tired after a week's hard work, did not sing much, therefore he saw defeat for the first time. Mr. Clarke being the lucky winner, I have handed him the medal, which he thanked me for very much. To show my bird is as good as ever, I gave him a week's rest and took him to the contest on June 2nd, when he again did his usual performance in running away with 1st prize. HARRY ALLEN.

On June 1st 17 of the best birds in Leeds sang for three prizes, given by Mr. J. Booth, at the King's Head, when some good singing was heard. 1, Hodgson; 2, Summers; 3, shared by Clarke and Fisher. Judges, J. Melia, T. Crane. Timekeeper, G. Towers. Also June 2nd, when 20 picked birds sung for four prizes. 1, Hodgson; 2, Fisher; 3, Stead; 4, Naylor. T. SUMMERS, Hon. Sec.

The Prince Albert Linnet Singing Association met June 2nd, to compete for three prizes given by Mr. J. R. Saynor. There was a good attendance of visitors. Judges, S. Green and C. Whittaker. Timekeeper, H. Greenwood. 1, Allen; 2, Clarke; 3, Wood. To the delight of a crowd of visitors, Mr. Allen's champion, in his usual form, simply ran away with the contest, and still proved to be the champion he is, which everyone acknowledged. After the contest Mr. Allen presented Mr. Clarke with the medal for the way Mr. Clarke beat his champion on May 26th, and Mr. Clarke thanked Mr. Allen. E. WOOD, Hon. Sec.

The usual contest took place at Skinner's Arms, Buslingthorpe. Fifteen birds competed for three prizes, given by Mr. A. Fisher. The singing was only moderate. Ridgewell, 1st; Laycock, 2nd; Brooks, 3rd. Judges, Messrs. F. Raper and A. Blackburn. F. RAPER, Sec.

Quality Linnet singing at King's Head. Prizes given by Mr. J. Booth. Our great All England contests took place on Whit-Monday, with a crowded house, consisting of members and visitors from upwards of a score different towns in Lancashire and Yorkshire. Twenty-five of the best picked birds from the above towns competed for ten valuable prizes. First birds were hung at 11 prompt. The singing, as all the visitors agreed, was worth coming a good many miles further than they had come, and some had come one hundred miles. 1st, Booth; 2nd, Galley; 3rd, Stead; 4th, Biss; 5th, Galley; 6th, Hardscastle; 7th, Clegg; 8th, Biss; 9th, Crowther; 10th, Topping. The ninth and tenth prizes were contributed by Mr. Woodhead, Bird Seed Merchant, and Mr. Procter, Wire Worker. Judges in this contest gave every satisfaction. Judges: Messrs. J. Melia, T. Crane, J. Clark. At the giving out of prizes a tremendous roar of applause greeted the winner, Mr. J. Booth, and each winner in turn was loudly applauded. The rest of the evening was spent in harmony, owners of the winners trying to beat their own birds, to the delight of all present. P. Hoban sung his old favourite song, "Napoleon Crossing the Alps." Winners of week-end contests are:—May 25th: 19 birds, 1st, Booth; 2nd, Galley; 3rd, Fisher. May 26th: 20 birds, 1st Biss; 2nd, Fisher; 3rd, Lacy; 4th, Stead.—J. MELIA, Sec.

On the Nightjar.

On still summer evenings, about sundown, one may hear a peculiar "jarring" or "churring" noise proceeding from the edge of a plantation or wood. To one hearing it for the first time it certainly has a rather uncanny sound. One can hardly associate this with the love song of a bird, and yet it must be so, for the Nightjar expends as much effort in producing the note as does the Cuckoo on his familiar song. This bird does not indulge in the luxury of a nest, but deposits its two marble-like eggs upon the bare earth.

SOLD SINGLY OR IN SETS.

One Penny each or Sixpence the Set of Six. State Number required and exact quantity.

Mr. F. Gelder (Bradford), an agent for our postcards, writes:—"Though an out and out Yorkshire fancier, I cannot help but admire the splendid specimens that Mr. Norman has so truthfully and faultlessly represented. Also you will greatly assist and oblige if you can let me have postcards as enclosed order to-night, as I have only a few left of the last lot."

BREEDING RESULTS.

According to reports of the different fanciers connected with Derby Society, the breeding season is very little better than last. The bright weather at Easter set the birds going at a merry pace, and some fanciers did fairly well, whilst others have done bad; but the cold weather since seems to have upset the hens altogether; in fact, they have done little since. But over this round again they seem to have gone about their parental duties in a more business-like fashion. Mr. J. H. Roe has about a score on the perch, and the Rev. S. Lawton Platt, with his crested pairs, has about 17, the greater part being Crest; these being the best results I have heard of up to date. The Yorkshire fanciers of Melbourne, Derby, seem to have made a good start, the hens laying and sitting well, with a very good percentage of eggs birded. One young fancier, Mr. A. Cratchley, I noticed, about three weeks since had 12 niee youngsters off four pairs of birds. Messrs. E. Spencer, G. York, H. Wall, F. Andrews and F. Illsley's stock seems to bid fair for a good breeding season. I quite believe you can get a Buff of two Yellows, but on visiting a well-known Derby Norwich fancier a few days since he showed me a nest of three off a pair of Buffs, and one of these is, without a doubt, a clear Yellow.—W. H. BAMSEY, Hon. Sec. Derby C.B.C.

Breeding operations are progressing somewhat slowly, owing, no doubt, to the long-continued cold weather; but there are a few exceptions. Mr. A. Brown, Mr. J. Brown, Mr. F. F. Hawkins, Mr. H. George, Mr. R. Lowery, Mr. H. Johnston and Mr. J. Harvey have all done well, and have a good percentage on the wing. There have been plenty of young birds, but the hens have been affected, no doubt by the cold weather, and a large number dropped off. —T. TAYLOR, Gateshead.

Breeding results in North London are not over grand at present. It might interest some of your readers to know that I have had a very large egg laid this year by one of my hens. It measures 1 by 3-16ths of an inch long and ¾ of an inch across. The hen is none the worse for it.—W. MORRIS, Stoke Newington.

The first round of the Canary breeders in the Wolverhampton district is only fair. Many of the fanciers whom I have seen have only a few on the stieks. Nests without eggs, and those with have been light. No doubt the changeable weather we have experienced has been the cause of this. I seem to be the only one who has had any luck. I have had them hatch well, and not a clear egg. I have 22 young doing for themselves, 12 more in nest, and 11 good eggs to hatch from eight hens. Mr. Tonks tells me that he has been successful with the Goldie-Bully and Greenie-Bully cross, having young from both, and several Siskin-Canary Mules. May he have the good fortune to rear them! Mr. Gadd has been going strong for the Chaffinch-Canary cross. Although the Finch seemed to perform his duties satisfactorily, the first clutch of eggs are light. Mr. Gadd is a trier. May he have the good fortune to yet bring it off is all the harm I wish him.—F. HOWES, Hon. Sec. Wolverhampton C.B.S.

SHOW ADVERTISEMENTS

(TARIFF ON APPLICATION).

FOLKESTONE, July 3rd and 4th. 18 Classes Cage Birds.
Entries close June 18th.
J. W. GAMBRILL, Hon. Sec

DONCASTER Annual Show of Cage Birds,
Thursday, July 4th, 1907.
Prizes, 8/-, 4/-, 2/-. Entrance Fee 1/-. Canaries, 3 classes; British Birds, 3 classes; Variety and Selling classes. Entries finally close June 19th. Send for Schedule (state for "Cage Birds") to
F. H. CHAFER, Secretary,
9, Market Place, Doncaster.

BATTERSEA and Dis. C.B.A. 2nd Annual Open and Members' Young Bird Show, Wed., July 3rd. (Entries close June 24th). "Duchess of Devonshire," Lavender Road, Clapham Junction. J. Robson, Judge. Schedules and any information, F. Easterling, 5, St. Mark's Road, Fulham Road, S.W.

The Newark and District Fanciers' Association have appointed as secretary Mr. S. C. Wilkins, 72, Milner Street, Newark.

The date of Ormskirk and District C.B.S. (Lancs) First Feather Show has been altered to July 13th, writes Mr. T. H. Tiffen, the Hon. Sec.

I wish to thank those readers who have been able to give me such valuable advice as to the building of an outdoor aviary.—W. S. Brewster.

For the benefit of the widow and family of the late W. Orme, a one-time member of the City and Suburban A.C.B., that body of fanciers has collected and forwarded on a sum totalling over £5.

We hear that the judges appointed for the Leeds Roller Club Show, which is to be held in conjunction with the Leeds Cage Bird Society on November 15th and 16th, are Mr. A. Rettich and Mr. J. Netherwood.

I beg to inform you that we have started an ornithological society in this district, the Milnshridge and District O.S., which will meet at the "Armitage Arms," Milnsbridge, Huddersfield, on the 3rd Tuesday in the month.—J. Cuttell, Sec.

From Wakefield comes the schedule of the City of Wakefield O.S. Show, which is to be held on Novemher 12th and 13th. We hope our friends in the West Riding capital will realise to the full the truth of the proverb about the early worm.

Mr. Quantrell, of Market Street, Watford, has consented to take up the secretaryship of the Watford and District C.B.S., as Mr. R. J. Watts, who was elected, regretted that he could not stand, as his medical adviser has ordered him away for the henefit of his health.

Mr. Parker Robinson, one of the judges originally chosen to judge at Leeds Open Show, having, write Messrs. C. R. Stephenson and W. Hornby, the Hon. Secs., expressed a wish to be released, owing to another engagement, the Leeds Society have relieved him of his duties.

At a meeting of the cage bird section of the Reigate F.A., held at Redhill on May 13th, Mr. Cosier read a paper on "The Norwich Canary, its Breeding, Feeding and Exhihiting." It was much enjoyed hy all present, and at the end of the meeting a hearty vote of thanks was given to Mr. Cosier.—A. W. Bacon, Hon. Sec.

We regret to hear that Mr. W. H. Bamsey, the highly-respected Secretary of the Derhy C.B.C., is suffering from a serious internal complaint, and has been ordered by his doctor to avoid all unnecessary work and anxiety. Mr. Bamsey's many friends will, we know, join with us in wishing him a speedy return to good health.

Numbers of young Canaries drop off at about six weeks old with a sort of distemper. They sit huddled up for a day or two and then die. Those who lose them should give Mr. Palmer's Tussiline a trial. It has saved hundreds, and rarely fails if fed according to his instructions. Tussiline is sold in bottles, 7d., 1s., 2s., hy Mr. Palmer, chemist, Gamlingay.—Advt.

Bournemouth C.B.A. First Feather Show will be held on July 10th. From the cluh hook we notice the Association has secured a splendid list of patrons and honorary members. Its membership now totals over 50, and the officers are well-known fanciers. Mr. W. O. Brooke, formerly Hon. Sec. of the L.P.O.S., is chairman, and the secretaries are Messrs. Leech and Jones, 156, Holdenhurst Road, Bournemouth.

Mr. F. Turnber, the well-known British bird enthusiast, asks us to notify his change of address to Princes Golf Club, Sandwich Bay, Kent. He writes:—It is very nice down here close to the sea. There are plenty of Wheatears about close to the house. I have only a few birds at presrnt, but hope to have a few more before the moult. I still have my Cage Birds to keep me in touch with the Fancy. It is like a new life living in the country after London.

A new society has been formed at Sowerby Bridge—the Sowerby Bridge and District Cage Bird Society. Fourteen gentlemen were enrolled as members at the first meeting, and Mr. C. A. Davies was appointed President, Mr. S. H. Jeffreys Hon. Treasurer, and Mr. A. E. Morton Secretary; the annual subscription to he 4s. per member. Will fanciers around this district please help us hy joining? All are cordially invited. The next meeting is to be held on June 10th, at 8 p.m., at the Wharfe Hotel.—A. E. Morton, Sec.

At a recent meeting of the London Cage Bird Association, Mr. Morris made some highly interesting remarks connected with tho hreeding of Canaries. He had found that he got some, in fact, most of his best birds from the smallest hens. The small hirds were the better feeders. Size in hens was more often than not associated with laziness. He advocated crushed hemp for the young birds up to the age of thirteen days, and was a great believer in giving young birds hread and milk. A hearty vote of thanks was accorded tho lecturer after a most interesting paper and discussion.

Mr. Apsley is to judge the Rochdale O.C. First Feather Show on July 8th.

The judges for Ilkeston Show, on December 7th and 9th, are Messrs. C. H. Houlton, R. Rhodes and J. H. Roe.

By an unfortunate printer's error the initials L.C.B.A., were last week appended to the announcement of the First Feather Show of the London and Counties A.C.B., which is to take place on July 13th.

Fanciers around Swansea and district do not appear to he having the best of luck this breeding season, so many young birds dying, writes Mr. W. A. Truscott. For myself, however, I am doing very well so far.

Mr. C. Baker, of Bedminster, desires to thank the many fanciers who have written to him expressing their sympathy with him in the death of his son. He especially thanks the fancier who sent the price of a wreath for the hoy's grave, but who omitted to send his name and address.

From the balance-sheet of the Civil Service F.A. we gather there is a halance in hand of £3 16s. 2½d. The rule hook contains a list of the members, and states the varieties they keep. The Association is open to all employed in the Civil Service. The secretary is Mr. A. Watson, 37, Russell Road, Holloway, London, N.

A very neat and natty little handhook has been issued by the London and Counties Association of Canary Breeders. It contains the rules, show rules, lists of meetings, shows, and other matters of interest to the members. The address of Mr. R. J. Pretty, the Secretary, is 6, Old Burlington Street, London, W.

OBITUARY.

Dr. JACOBSON, of Sleaford.

It is with profound regret that we announce the death of this great lover of birds. Dr. Jacohson had been in failing health for some time, but his death came quite unexpectedly on Sunday last. He was one of the keenest aviarists in the Sleaford district, his extensive aviaries heing stocked with both British and Foreign birds. One of the best-known men, as he was one of the most popular, in Sleaford, Dr. Jacobson will be sorely missed. A genial, warm-hearted fancier, a kind, sympathetic friend of the poor, his death causes a gap hard to fill.

A most interesting programme has been issued by the Greenwich and Deptford C.B.S. It includes lectures and papers on the Norwich and Yorkshire, colour feeding, hreeding results, ramhles, and shows. The headquarters are at "The Two Brewers," Church-street, Greenwich, and the secretary is Mr. G. Hill, 101, Barkworth-road, Bermondsey, S.E.

The hest is the cheapest in the end. Ramsden's peppers are the best, therefore the cheapest. Ramsden's peppers are of delightful colour and quality, and fully guaranteed to pass the requirements of the Food and Drugs Act. Pure—absolutely pure—and, quality considered, the cheapest on the market. Buy Ramsden's peppers, and know you have the best the world produces.—Advt.

ADDRESSES WANTED.

Will the following fanciers kindly send us their present addresses as soon as possible?

Allan, R., and Sons, Kelso.
Bisset, A., Frenchay.
Blenkinsopp, W., Wellington.
Cave, F. R., Bramley.
Croft, R., Bradford.
Dickinson, T. E., Newton.
Draper, T., Gresley.
Dukes, —, ——
Dicker, W. H., Plymouth.
Fisher, G., Cardendcn.
Flood, W., Bridgend.
Giles, D., Castletown.
Gregory, Mrs., Penrhiwceiber.
Howard, A., Mayfair.
Hopkinson, T., Heaton.
Harvey, G. J., Lipson.
Henderson, T., Holborn.
Jones, F. E., Swansea.
Jennings, A., Milnthorpe.
Kenyon, J., Sheffield.
Lewis and Gough, Abertillery.
Morgan, J. W., Mile End, E.
Moyes, J., Thornton.
Mooney, J., Monkwearmouth.
Merrington, Mrs., Merton Park, S.W.
Nicoll, J., Lochee.
Norris, J., Harpurhey.
Parsons, G., Bournemouth.
Reid and Phillips, Kelso.
Oliver, J. W., Middlesbrough.
Pegg, R. J., Derby.
Todd, R., and Son, Darlington.
Price, W., Birmingham.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).
W. O. BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate.
J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.
W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.
GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. Thirty years' experience. Terms moderate.
J. BERTIE, 7, Mitchell-st., Nottingham, Judge of Canaries and Cage Birds; all classes; 30 years' practical experience.
W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over twenty years' experience. Terms moderate.
A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.
J. DOBSON, 14, East Road, London, N. Judge of Canaries and Cage Birds.
J. W. DRIVER, (Adnitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.
GEO. GARDNER, 11, Haverstock Road, London, N.W. Judge of all kinds of Cage Birds.
C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow. Judge of Canaries, Mules, British and Foreign Birds.
E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds (all varieties). Life experience.
F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees, Mules, British and Foreign, a Speciality. 17 years exhibitor. Terms moderate.
W. R. MILES, The Aviaries, Chichester. Judge of Canaries and Cage Birds. Life experience.
W. MUNDELL, 6, Carlisle Place, Bradford. Judge of Canaries and Cage Birds.
J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds. Author of "The Common Sense of Canary Rearing."
J. PATTERSON, Chirnside. Judge of Cage Birds. All varieties. Wide practical experience. Specialist Border Fancy Judge.
J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.
PARKER ROBINSON, N.B.B. & M. Club, 1, Back Hartington Street South, Barrow-in-Furness. Cage Birds, all Varieties.
J. H. ROE, 167, Clarence Rd., Derby. Judge of Canaries and Cage Birds. Twenty years' practical experience.
WILLIAM J. ROSS, 19, Haulgh Road, Inverness, N.B. Judge of Pigeons, Canaries and Cage Birds. All varieties. Life experience.
C. E. SILK, The Aviaries, Emsworth, Hants. Judge of Canaries and all Cage Birds. Life experience.
HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.
R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.
J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of Canaries and Cage Birds. 25 years Breeder and Exhibitor leading shows.
J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. Thirty years' experience.

Leeds Fanciers, Note.

The Leeds Cage Bird Society intend having a trip to Monk Fryston on Saturday, June 15th, to see the aviaries. Will all members who wish to go communicate with the secretaries? The aviaries are well worth a visit, and it is hoped a good number will send in their names.—C. R. Stephenson and W. Hornby, Hon. Secs.

A Pet Seagull.

Many years ago, writes a correspondent in a contemporary, while watching a heavy sea, a young gull was carried against me by the force of the wind. I held it, and, making it a captive, took it home. In a few days it was quite tame, and would follow me about like a dog. It would fight any cat that came near, and lived for four or five years.

Standards for British Birds.

Is it desirable or necessary for British birds to be judged to a standard? The point that the types of British birds were less fixed and more elastic than the types of Canaries was raised at a recent meeting of hird keepers in London, and one gentleman, a member of the National British Bird and Mule Club, expressed the opinion that it was quite superfluous in his private view for the cluh to have fixed standards. Canaries were bred for, but British birds had to be caught. What do exhihitors think of the argument?

Seen and Slaughtered.

The usual crop of records of rare birds and other living things being seen and promptly shot or destroyed has disfigured the columns of the press this season, as of yore. It reminds one of "Truth's" caustic comments on such edifying records, which that journal thus happily parodied:—

Sir,—I saw a Goldfinch beginning to build on February 25th, and I got her nest and hlew all the eggs on March 2nd.—A. Munky (aged five), the Rectory, Spoilehois.

Sir,—I saw a hig hluebottle in the nursery on March 1st, and after breakfast I caught him and pulled his wings off.—Georgey Porgy (aged four), Quiverful Vicarage.

Sir,—I saw a tabby kitten in our garden on March 5th, and I caught it aud put it down tho well on March 6th.—Johnny Green (aged seven), the Manse, Kilkatkin.

W. A. LOTT,
Heraldic Artist & Illuminator.
Congratulations, Addresses, Votes of Condolence, etc. artistically executed in all colours, with borders framed complete, from 20/-, post free. Address:
97, CHEAPSIDE, LONDON, E.C.

THE LEADBEATER COCKATOO.

By F.Z.S.

When all has been said for them the Cockatoos, taking them altogether as a race, are not in the highest of good repute as cage pets. Their size, harsh voices, which they can use so distressfully from their human associate point of view, and sometimes treacherous temper, count against them when compared with many of the smaller and more tractable Parrots and Parrakeets. But, as we have often had pointed out, individuals vary greatly in all species, and it is by no means uncommon to discover some of the most delightful pets imaginable belonging to species that are in a general way anything but desirable companions. So much by the way.

The Cockatoos are, as a rule, not very popular as household pets, yet when taken in hand properly and carefully trained are capable of being made into extremely companionable and clever birds.

The Leadbeater, about which I began to write these notes, is quite one of the prettiest and most chastely coloured members of the tribe. He is handsome without being vulgar, having none of the gaudy display of contrasting hues which distinguish his Rose-breasted cousin, nor yet any of the sombreness of the Vasa. It may well be summarised as a delicate combination of tints suggestive of the summer delicacy of strawberries and cream. The general ground colour is white, delicately suffused with rosy pink on the head, neck, breast, and side, deepening to a crimson hue underneath the wings. The head has a long, prominent pointed crest, which it raises and displays very freely, and which is its chief adornment. It has a band of bright red at the base of the crest plumes, succeeded by a band of rich yellow, followed by another band of red, and ending with pure white tips. The beak is a pearl-grey colour, and the legs and feet dark grey.

The sexes are alike in general plumage; but it is pointed out by the late Dr. Greene that the sex of a given bird can always be distinguished by the colour of the irides, which are reddish-brown in the female, and black in the male.

It is a native of South Australia and New South Wales. In captivity it is hardy and vigorous, provided it is protected from draughts and damp, and is not so much addicted to screeching as are many of the Cockatoos, and in being tameable and of an amiable disposition it compares very favourably with the rest. Indeed, Gedney distinctly says that it is the most amiable of the Cockatoo tribe, and further adds that its habit of screeching is due chiefly to nervousness, and is suspended when the bird gets accustomed to its surroundings and learns to know its human associates.

It must be kindly treated, as any harshness or teasing on the part of its owners simply serves to perpetuate the vicious habit which has doubtless been the cause of most writers either giving it a bad character or almost ignoring it. Even such an authority as Dr. Russ, in his handbook, disposes of the Leadbeater in a very few lines.

Its food should consist of a mixture of maize, oats, hemp, dari, wheat, with pieces of plain, dry biscuit, raw carrot, and plenty of green food. All animal foods and milk sops should be avoided. A constant supply of coarse, gritty gravel, and fresh, pure water for drinking purposes must be provided.

Although Cockatoo breeding is scarcely likely to enter into the speculations of any save the most enthusiastic amateurs, it may be interesting to point out that Dr. Greene, in his standard work on Parrots, says that in such an event the adult birds should have insect food such as mealworms and daddy long-legs, but that such food should never be given to a single bird, or it will be a very powerful incentive to feather plucking, when the bird's great natural charm and beauty will quickly be transformed into a vision of misery and wretchedness.

A HANDY BOOK FOR LOVERS OF BIRD LIFE.

BIRDS OF THE COUNTRYSIDE

By FRANK FINN, B.A.

In Cloth gilt, 5/- net.

With about 130 full-page and other illustrations and 12 full-page Coloured Plates

"No better or more interesting companion for a stroll in the spring and summer days could be chosen by those who wish to be on speaking acquaintance with the birds they may come across."—WESTMINSTER GAZETTE.

LONDON: HUTCHINSON & CO., PATERNOSTER ROW.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Altrincham C.B.S.—June 11th, at Central Cafe, 8 p.m. Special meeting; important notice of motion re Open Show business.—T. Harrison, sec.

Wigan and Dis. C.B.S.—June 10th, at Adelphi Inn, 8 p.m. Schedules Young Show, etc.—W. Ridge, scc.

Wolverhampton and Dis. C.B.S.—June 11th, at Vine Hotel, 8 p.m. Discussion, "Management of the Bird Room."—F. Howes, sec.

"Impossible to equal for clearness, utility, completeness and money's worth."

That is the Universal Verdict on

THE STOCK BOOK.

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

To meet the need for a substantial book designed to hold a permanent record of the progress made by any Fancier in the hobby, we have had compiled by Mr. G. E. WESTON, our

BREEDING ROOM REGISTER

AND

BIRD KEEPER'S ACCOUNT BOOK.

(COPYRIGHT.)

Which offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints will also be found in its pages.

A Few More Tributes to the "Stock Book."

Your Bird-room Register is an ideal one.—J. BUTTERWORTH, Sec. Rochdale O.C.

Breeding Register I consider quite up-to-date.—GEORGE SANDERSON, Hon. Sec. Kent County C.B.A.

I must congratulate you on the up-to-date style of the Register.—W. H. COLMAN, Wimbledon C.B.S.

Your Breeding-room Register is the best that I have seen, and should be a boon to all fanciers.—W. WRIGHT, Sec. Keighley C.B.S.

I consider Breeding Register the most useful and concise I have seen, and a boon to all pedigree breeders.—E. JONES, Manchester and N.C.O.S.

Breeding Register is a splendid idea, thoroughly up to date, and the price within the reach of all classes. No bird room complete without it.—C. E. BROWN, Bristol C.B.S.

Your excellent Breeding-room Register has come safely to hand. No bird room can be really complete without this excellent compilation.—W. H. TRUSCOTT (Swansea).

Breeding-room Register is one of the best I have ever seen. It is quite up to date, and should be in every fancier's room.—T. VOSE, Sec. St. Helens O.S.

Your "Breeding Room Register," I think, is absolutely perfect. I shall certainly bring it to the notice of our members.—S. LODGE (Huddersfield O.S.).

Breeding-room Register is a credit to its compiler, and every fancier should have it in his breeding room. I do not see how you could improve it.—W. H. BAMSEY, Hon. Sec. Derby C.B.C.

"Breeding Room Register and Account Book" to hand, for which I tender my best thanks. I am sure it will prove very useful to me. It is quite up to date.—W. STAFFORD (Stockport).

I duly received copy of "Register," with which I am highly pleased. It is, in my opinion, the most useful book ever placed before the Fancy, and at a most reasonable price. The compiler deserves every credit for his work.—J. W. KING (North Shields).

Your Breeding-room Register is a grand idea. Great credit is due to the compiler for the complete and simple manner in which it is arranged. It contains everything required by the breeder for future reference.—A. E. GODDEN, Hastings United C.B.S.

Breeding Register is a most useful and complete book, providing, as it does, a pedigree register, breeding record, show record, and balance-sheet for year's expenses. Surely a fancier needs nothing further to be able to keep an accurate account of his birds' doings.—H. HODSON, Hon. Sec. Dulwich and Peckham C.B.S.

Your "Breeding Room Register" is so complete that, after looking over the several headings, I could not offer the slightest suggestion as to any alteration or improvement. It will afford me the greatest pleasure to recommend it, as I consider no bird room should be without one, especially when it can be obtained for so small a sum as 7d., post free. Wish CAGE BIRDS every success; it is very popular in Ould Ireland.—W. C. SHOLEDICE (Hon. Sec. Y.C.C. of I.).

I am in receipt of Breeding Register, which I consider will be very useful.—A. LIVESEY (Bingley and District O.S.).

Your Breeding Register is very complete, and will prove a boon to bird fanciers in general.—A. CHALMERS, Kirkintilloch.

Your Breeding Register I consider is an ideal one, and a great improvement on others.—A. WILKINSON, Crewe District O.S.

Breeding Register is a splendid idea, and very original and up to date.—R. P. HARPER, North London C.B.A.

I have recently seen a good breeding, etc., register, but yours is superior in every respect, and a marvel of cheapness. I wish it the sale it deserves.—GEO. FRANCIS (Lowestoft C.B.S.).

Your Breeding Register I shall be only too pleased to induce my friends to purchase, as I am sure it is the very thing which has been needed so much.—J. J. MULLETT (Dudley).

Your Breeding-room Register speaks for itself, and I have no doubt you will find a ready sale for it.—J. WINTER, Sec. Scottish National C.B.S.

Your "Breeding Register" is just what is wanted in every cage bird fancier's room. I do not consider there is any room for improvement in it in any way.—A. LUPTON (Bermondsey and Dis. F.A.).

Breeding and Stud Register is the most up to date yet published. I have shown it to several of our members, who declare the same. W. JACKSON, Sec. Goldthorpe, Thurnscoe, etc., C.B.S.

Your Breeding-room Register, I think, is absolutely perfect, and is the very thing that is wanted. I am sure I will do my very best with it and introduce it to the members.—T. DUFFIELD, Hon. Sec. West Bromwich C.B.S.

Your "Breeding Room Register" is a most useful book to any breeder, containing, as it does, all the information that is necessary in any room. The pedigree register is up to date, while young bird register is very useful. The book is splendidly got up and remarkably good value.—T. BISHOP (Sheffield).

Breeding-room Register is grand, and should prove very useful to breeders who desire to keep an account of how their birds are bred. I don't think it can be improved on. It reflects great credit on the compiler, and you should have a very good sale for it.—D. HARWOOD (Accrington).

Your Breeding Register is a work that every fancier would do well to secure. I am delighted with its arrangements. It is so simple and easy to understand that no one need err therein. The pedigree breeder will find all that he requires to keep an account of every bird, how it is bred, and what it is bred from.—ALBERT HOLDEN, Sec. Gt. Horton O.S.

I fail to see where there is any room for improvement in Breeding-room Register. It should prove a necessary addition to one's bird room. I shall push it all I possibly can, and will have a copy in a conspicuous spot at our Young Bird Show on July 16th, when fanciers will undoubtedly see the advantage of having a copy of CAGE BIRDS' "Stock Book."—A. WATSON, Hon. Sec. Civil Service F.A.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include or** *be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** 154, *Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons—**J. North.** Miscell.—**"Old Judge."** Border Fancies—**J. Patterson.** Scotch Fancies—**R. Wright.** Lizards—**Barker Clegg.** Lancashires—**S. R. Compston.** Greens—**S. Hadwin.** Belgians—**W. B. Cobb.** Rollers—**"Schoolmaster."** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c. Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S., M.B.O.U., &c. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

A Young Fancier.

K.D.F.—I am pleased to hear the eggs have hatched out, and trust you will have the luck to rear the young. But I should advise you to kill the one with the neck twisted, as it can never be of any use. (2) For the hen that is coustipated, give, in the drinking water, twice in one week, a piece of sulphate of soda about the size of a horse bean. Also let her have, two or three times a week, a couple of young dandelion leaves. The glycerine you gave would do her no harm; in fact, it would have a beneficial effect. I must congratulate you upon writing such a sensible letter, and for a lad of 12 years old it does you much credit. You are starting at about the age I did, and I sincerely hope you may be successful in your career in the Fancy.

Not on His Top Note.

No Name.—Give your Norwich cock 15 drops of syrup of tolu and six drops of whisky in his drinking water every other day for three weeks. You may give him the egg food as you are now doing, to which add six drops of Allen and Hanbury's Byno-phosphates. (2) Give your hen, twice in one week, a piece of sulphate of soda about the size of a horse bean, after which let her have, in the drinking water, fresh daily, for a fortnight, ten drops of tincture of quinine.

Moulting Out of Season.

Manty.—Your friend most probably hung the bird in the window, or else had it in a warm kitchen and hung up high above the gas. More birds are driven into cross moult through these two reasons than anything I know of. Keep him in a cosy place, well below the level of the gas, and out of the reach of any draught. Let him have the egg food, as you are doing now, and add to it six drops of Parrish's Chemical Food. Put in the drinking water, for the noise you say he makes, 15 drops of syrup of tolu and six drops of paregoric. Let him have this fresh daily for three weeks, and at night cover him over with a warm cloth. Give, three times a week, a couple of young dandelion leaves, and now and again a spray of watercress.

Mixing Soft Foods.

Novice.—(1) Use both the white and the yolk of the egg when mixing the food for feeding the young with, and also for colour feeding. (2) Put two heaped-up teaspoonfuls of colour food to one egg and equal weight of bread or biscuit, to which add a little sugar, and well mix together.

Concerning Canary Seed.

Sambo.—I should advise you to take the canary seed right away from the bird or birds that crack the seed and drop the kernels, and feed them on a mixture of hemp, German rape, and niga seeds, for eight or ten days. Then return the canary. This cracking of the seed is a habit some birds get into, and a very annoying one it is, too, especially if you have a lot flying together; and sometimes it is a very difficult one to break them of. Taking the seed away, as I have advised, will often have the desired effect. (2) The sample of seed is a very good one, being clean, plump, and well harvested.

Colour Feeding Young Birds.

A. Halliday.—You have done very well in your first attempt at Canary breeding to get five in one nest, and I hope you will have a continuance of fortune's favours. Put your young on colour food when they are six weeks old. You should use two heaped-up teaspoonfuls of the colour food to one egg, and equal weight of bread or biscuit, to which add a little sugar and well mix together. When commencing to colour feed, do not give quite so much colour feed, but work up gradually to the quantity advised. You may feed your next nest just in the same way. Yes, you may give your young, for a time, weak cold tea instead of water; or first boil the water.

Was it the Change of Seed?

Luckless.—Changing the seed would not be the cause of your bird's going into a soft moult. I should rather fancy you have had them in a draughty place, or perhaps kept them in an overheated room. If you can change them to another room, do so, and this may have the effect of checking it. Still continue the medicinal treatment, and cover them over at night with a warm cloth.

Troubled with Nesting Diarrhœa.

New Reader.—I am unable to account for your hens having nesting diarrhœa when the young were a fortnight old. But I am inclined to think the wretched weather has been the cause of so many going wrong this way. You say you use soaked rape seed. If you merely soak it in cold water, this it not the correct way to prepare it. You should pour boiling water over it and let it stand until cold. Then put it in a strainer, and let the tap water run over it for a little while. This will take away the rankness and acidity. You may give the hens a little egg food whilst they are incubating their next nests, also a pinch of maw seed every other day. Do you use plenty of hemp seed when your birds have young? If not, do so; let them have as much as they will eat.

YORKSHIRES.

Answered by H. W. BATTYE.

Treatment Successful.

H.A.P.—Glad to know your bird has so greatly improved under treatment; continue same according to your own judgment until milder weather comes, when probably your bird will be all right. Once or twice a week you might put a few drops of tincture of gentian in its drinking water. Gas is harmful, and is often the cause of birds throwing feathers, or being in what is known as the loose moult, all the year round.

Damaged Wing.

E.W.S.—Probably your youngster, which seems to have broken one wing, has had a severe knock. I should advise keeping it as quiet as possible for a week or so, when you may very likely see a great improvement. I have known birds recover and show very little signs of the accident, while others never after are able to pick the wing up properly. You can only do as above, and wait to see how it turns out later. (2) Why, in the name of common sense, will people buy birds that are in the state you say this bird is in! I don't think it will ever be worth anything to either you or any one else. You say it is three years old, has just got over a long moult, has hard swellings round vent, is not singing—in fact, is just about everything it ought not to be. If it was mine I would either kill it or give it away.

Colour Feeding, etc.

Rags.—(1) A good mixture with which to feed for colour is made up as follows:—One part hot Natal pepper to five of pimento, or tasteless pepper; add 1 oz. of oil to each pound of the pepper; various kinds of oil are used. Many use olive oil, which is perhaps the best; get what is known in the trade as sublime olive oil. Squeeze all lumps out of the tasteless, and then mix the peppers together; add the oil gradually, mixing as evenly as possible. (2) Your Yorkshire hen sits her eggs for four days, then stays off the nest on the fifth night, looks as though she had been disturbed, and I don't think the eggs will hatch out if, as you give me to understand, the hen was off the whole of the night.

Young Birds Dying.

Battye.—You say you have lost several young ones at about seven weeks old, yet you don't say a word as to how you have been feeding them; that being so, makes it very difficult for anyone to advise you; but at that age they should have got on hard seed, when they are not as liable to inflammation of the bowels as when on soft food. The medicine you mention is a capital remedy, but a little too slow in its action, as this complaint is not very long in either ending or mending. When a bird is from six to seven weeks old, it should not be eating any soft food. I consider this just the breathing space, as we may call it, between breaking off from egg food and being put on colour food. Milk sop is all right in its place, but not as a regular food for young birds, and is not necessary at from six to eight weks old, unless the bird it ailing. The quickest way to relieve in a case of inflammation of the bowels is to lightly touch the belly of the bird with turpentine, as often recommended in CAGE BIRDS.

Lump on Neck.

E. A. Wilder.—You say your friend's bird has formed a lump at the back of its neck, but you do not mention whether the lump is a solid one or not. If hard and solid, I would recommend painting it every day with tincture of iodine until it wears away; but if it is soft and seems full of water, I should lance it, squeeze out whatever it contains, wipe dry, and then anoint with lanoline or Zam Buk. As to its shoulders being raw, I fancy the bird is infested with red-mite, which will cause it to be continually pecking itself. Give it a good dredging with insect powder. Let it have a clean new cage, or scald the old one in boiling water, and then paint all the crevices with paraffin. If you don't think the bird is troubled with insects, try putting a thin white cloth over the cage at night, and some time after, before retiring, take a light and examine the cloth, when I think you may be convinced. The feeding seems all right.

Cause of Death.

Newport.—Your Yorkshire cock no doubt had broken a blood vessel, probably from some over excitement, and the hard work of feeding four big young ones will not have done him much good, as, when a cock is a real good feeder, he is quite different from a hen. The latter seems to know what is sufficient and when to give up, and will refuse to give more, while a cock that takes to feeding seems proud of his work, and will keep on feeding as long as there is a young one to open its mouth. Whilst I am fully alive to the usefulness of a good feeding cock at times, I very seldom allow my stock cocks to feed young ones. (2) Yes, I have very little doubt about your hen rearing the second nest by herself; my hens do, and last season I lost a cock suddenly on the day the hen laid her third egg; she laid a fourth, and hatched and reared four young ones.

Trouble with the Young.

Mrs. McVey.—In answer to the question of separating the healthy bird from the two that seem huddled up, by all means do so at once, and put the two into a clean cage and sprinkle the bottom of the cage with sand. For a week clear away all droppings three or four times a day, and sprinkle fresh sand over the place each time. Give fresh each morning, to the ailing birds, a little milk sop made from boiling milk and either a little stale bread or good biscuit; let it soak, then press out as much milk as you can. Well mix with the sop six drops of syrup of buckthorn and a little finely-powdered sugar, then sprinkle a pinch of maw seed over the lot. Let this, in addition to white canary seed, be its only food for three days, and then, for one week, substitute six drops of Parrish's Chemical Food for the syrup of buckthorn in the milk sop. Give what you find sufficient to last the day, clear away any remaining uneaten at night, and give fresh each morning. The blister you say the bird develops that has been badly plucked about the face and breast, will most likely have been brought on by getting some foreign or poisonous matter into the skin at the time it was plucked, and should advise you to again lance the blister and clean it well by washing in luke-warm water, in which you have dissolved a little permanganate of potash. Wipe thoroughly dry, and then anoint with pure lard, for three days, and afterwards just a daub of zinc ointment daily till well. Yes, water should be given to young birds when they are taken away from their parents; as a rule they do not drink much whilst on soft food, but to deprive them of the opportunity is, in my opinion, both unnecessary and cruel.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Crested Hen Breathing Heavily.

F. Pearse.—From the description you give of your Crested hen, I cannot think there is much the matter with it. The absence of noise when breathing is a sufficient guide that there is no lung trouble. When you say that it rolls at times, I conclude that you mean this happens when the bird is asleep. If so, I may tell you that this is no symptom of sickness, and is what many birds do when asleep. If it appears all right during the day, and is not wheezy, nor sits thick or mopy, you may be satisfied there is nothing seriously the matter. Your feeding is quite correct, but discontinue the dandelion juice. You might mix with the egg food a few drops of Parrish's Chemical Food, and to the water add 6 drops of whiskey for a few days. Should it develop any signs of sickness, write again and give every particular.

CINNAMONS.

Answered by J. NORTH

Which is the Better Match?

Brasso.—If your clear yellow cock, which you contemplate pairing with a Cinnamon hen, is not a Cinnamon nor Cinnamon-bred, you would not get any Cinnamon offspring from him, even when paired to a Cinnamon hen, but if you run such a hen with the heavily variegated cock that is bred from a Cinnamon ben and yellow cock, you may get some Cinnamon-coloured youngsters, most likely all of which would be hens and the young cocks green. Everything, however, depends on pedigree, and your special requirements about which I know next to nothing. If you want to breed Cinnamons this is not the way to do it; you must have more of this colour showing itself on the male side to be successful.

One Nest One Egg Hen.

Novice.—It is difficult to find a reason why your hen should be so reluctant to nest and lay. You do not say that she is a young hen, and so it seems possible she has shown her barrenness in past seasons, but if you knew her to be a young bird, there is time yet for her to mend her ways. Give her a teaspoonful of egg food every day, on which you have let fall three or four drops of Parrish's Chemical Food, a leaf or two of dandelion, watercress, or lettuce should also be given. She should be kept in a breeding cage provided with a sliding compartment of wire, so that the cock may see her without being able to molest her, or they may for a time be kept in separate cages, but placed close together—that is, until the hen shows signs of wanting to build.

ROLLERS.

Answered by "SCHOOLMASTER."

Fixing Marking Rings.

Sam Clark.—It is not difficult to fix on marking rings, provided one has not clumsy fingers. Only clumsy folk break toes and the like. They should be put on when the youngsters are about seven or eight days old. Hold the young birds so that their legs come among one's fingers. Smear just a little vaseline (butter, or even soap, will do at a pinch), over the leg which is to hold the ring, also the toes. Then hold the three front toes together, and pass the ring up over them. Let the back toe go back towards the shank of the leg, and take the ring up the leg over it. Then release the hind toe, and the ring will be found to keep in its place. It is but seldom they slip off again. Thus you will see closed rings are not difficult to put on, providing the birds are not left until too old. Wipe off the vaseline, etc., afterwards, of course. A nestful can be rung in a very few minutes. Rings which open are the more easily fixed, naturally.

Loss of Voice.

No Name.—Your bird must be thoroughly run down to have lost its voice for so long. You must keep it in a box cage, in a nice warm corner, free from draughts, and throw a cover over the cage at night if it seems necessary. Put a bit of mutton suet between the wires for the bird to peck at, changing it frequently. Give the bird, every day, a teaspoonful of prepared egg-bread (or any good ready-made Canary bread advertised in our columns), made just moist with milk, and well sprinkled with maw seed. Mind it never goes sour; make it freshly often. Let it have a good half-teaspoonful of linseed to eat daily. To put in the drinking water, it is hard to beat glycerine and honey, two tablespoonfuls of the former well mixed with three of the latter. Of this, a small teaspoonful should be well stirred in two tablespoonfuls of drinking water. If this proves ineffective, you might give a trial to the solution of tar mentioned in the correspondence columns last week.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Hens Dying.

A. Williams.—It is really quite impossible for me to help you, much as I should like to. When birds die suddenly in the manner which yours seem to have done, it is impossible to state the cause of death except by post mortem. Had you sent one or both of the dead bodies to Mr. North, with the needful fee, he would have been able to give you the help which I am prevented giving.

Are They a Pair?

H.T.—There is not the slightest doubt that you have paired two hens. The fact of there being eight eggs and both birds sitting is full proof. The only thing you can do is to secure at once a couple of cocks, and mate them to your hens. That is, if you are anxious to breed this season. It is very annoying and vexatious to think your season should have been spoilt in this manner. I am sorry for you.

Testing Eggs.

A. R. Parry.—Yes, you may test your eggs at the end of a week. It is best to do it at night. Take each egg and hold it lengthways between the forefinger and thumb in front of a candle, and you will at once see if the egg is fertile or not. If clear you will see the light streaming through, but if they are good they will be dark or opaque in appearance. Handle the eggs very carefully, or you may easily injure the delicate membranes in them, and thus prevent their being hatched.

Ventilating Bird Room.

Birdroom.—The fresh air should be admitted by ventilators fixed near the floor of the building, say about 6 in. up the walls, and the foul air could be carried away by an exhaust ventilator in the top of the roof. If impossible to fix a ventilator in the roof, you might fix some in the side walls as near the roof as possible; cover the openings with perforated zinc, and affix a sliding board to them, so that you may vary the inlet and outlet as necessity demands. If you are afraid of draught you can prevent it by fixing a sloping board so that the air on entering the room is thrown upwards, and not allowed to come straight on to the cages.

Quaker Oats.

Would Quaker Oats, boiled 30 minutes and mixed with condensed milk and brown sugar, be beneficial or harmful to Norwich Canaries breeding in outdoor aviary? Having put a plateful in the garden I was surprised to see how quick the Starlings and Sparrows devoured it. I then put some on the floor in the aviary, and the Canaries seemed to like it very much, and even the young in the nursery cages seemed to enjoy it; but, as it contains a quantity of starchy matter, I would not continue it until I had your opinion, which is always satisfactory to those in doubt.—THOMAS MINTER.

Thomas Minter.—Given in moderation, the feeding on Quaker Oats and milk in the manner you describe could be nothing but beneficial to the birds so fed. Quaker, or any of the other rolled oats, are not so heating in their effects on the blood of birds and animals fed upon them as the old-fashioned ground oatmeal. In conjunction with milk, rolled oats are almost an ideal farinaceous food. I should, however, prefer to use ordinary cow's milk, and cook both milk and oats together in an earthenware jar or stock pot. To get the full benefit of the oats and milk they should be cooked in a slow oven for about two hours, and not over a quick fire. I have used rolled oats in this manner many times for various animals and birds, especially in the winter time. I have, however, used Provost Oats; they are both grown and rolled in Scotland, and thus are all British, beside which no land in the world can grow oats like the south of Scotland. Scottish oats are far richer in feeding properties than those grown on any other soil.

Young Canaries Dying.

My young Canaries live for about nine days; they come on all right with flesh but without even one feather; the parents seem to feed them grand, but they all die. I give them egg and Osborne biscuits.—G.D.O.

G.D.O.—It is difficult to say why your birds have not feathered or lived. They should have been strong and vigorous, seeing that they were the result of a distinct cross between two different varieties. You say you have given them egg and biscuit, but you say nothing about other food. I presume, however, you have given them canary seed and green food. You also say nothing about the conditions under which they are kept. If in a room by themselves, or in a living room. Does the cock feed well? Does the hen sit close and sweat the young? I am inclined to think this is the most probable cause, and should advise you to remove the cock bird the next time the hen goes to nest. This will make her come off more frequently, and give the youngsters time to cool down. You might write me again giving fuller particulars as to food and where the birds are kept, when I shall be pleased to give you further advice.

Hen Swollen Behind.

I have a hen ill, all swollen and inflamed underneath. I resorted to remedies for egg-binding, but with no results. She was in the kitchen with a gas-stove. I have moved her out into a lobby where there is no artificial heat. I have been feeding her on milk sop. Yesterday I found her all stopped up with a yellow crustation, so steamed and oiled her with warm oil, but no egg came. She is still swollen towards the vent and a little inflamed, but the swelling does not seem like an egg.—G. WALLACE.

G. Wallace.—I am afraid that in moving your sick bird from a warm kitchen to a cold lobby you made matters far worse, especially during such variable weather as we have of late experienced. You should keep her in a nice warm room and out of sight and sound of the cock. Continue the milk sop and cover it with six drops of syrup of buckthorn for a week. Mix in the drinking water a little Parrish's Chemical Food, just enough to make the water a rich pink colour. The fact that the first nest of young did not hatch, and that the hen went wrong directly you put her with the cock for the second nest, indicates that she is not of a strong constitution. In place of the ordinary seed let her have some soaked or scalded German summer rape seed. Avoid all green food for a time. Give her some cuttlefish bone to peck at, and let her have access to good gritty sand at all times.

Troublesome Hens.

(1) Hen bred in April and hatched three; laid again, two eggs, and got egg-bound; with third seemed very bad. She has now laid two eggs, though alone. Shall I put her back to the cock? (2) I got a hen six weeks ago, in poor condition. She has picked up a bit, but eats and drinks very little. How will I best get her into breeding condition? She won't wash, either.—IRISH TYRO.

Irish Tyro.—(1) You ought to have taken the hen away out of sound, as well as sight, of the cock. The eggs certainly will not be fertile. If she is not strong it is a mistake to mate her, she cannot possibly rear healthy youngsters. If there is nothing wrong with her except the weakness caused by the egg-binding, and from which she should now have recovered, you may remate her. (2) It is very late to think about getting a hen into breeding condition, and from what you say with regard to this hen, I should most certainly advise you not to attempt breeding with her this season. If you do make the attempt you will only be courting disappointment.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

Handrearing Bullfinches.

Miss A. F.—I have given this information many times lately, and am really unable to keep on repeating. In our issue of May 18th last very full details are to be found; and the subject is touched on in practically every issue since. Briefly, the process is to use two crushed Osborne biscuits well mixed into the yolk and half the white of a hard-boiled new-laid egg, beaten up finely, moistening the necessary portion to a creamy consistency when about to feed, with a little new milk. The latter may be boiled milk allowed to get cold, if you like; or just plain water can be used, though I strongly favour the milk. You can give a drop of water occasionally after feeding, but I have never found it necessary, though it is true I adopt this practice when hand-rearing large birds. Never give too much at a time, and feed, roughly speaking, about every two hours. Keep the nestlings cosy and scrupulously clean, and in a warm spot. Mix a pinch of fine, but gritty sand with their food now and again, or crushed cuttlefish bone will answer the same purpose. As the nestlings grow add a proportion of soaked and sprouting rape seed to the food; a few ants' eggs (freed from all rubbish) are also good. A few mealworms cut into pieces should also be dipped into milk and popped into the nestlings' mouths frequently; likewise any small house flies, smooth caterpillars and the like which you can capture.

Weaning Young Chaffinches.

Chaffinch.—It is safe to say that it is never a difficult matter to wean young Finches of any species on to a seed diet once they commence to pick for themselves. One needs to be careful, however, not to take them entirely away from their parents until they cease to "cry" to be fed. When hand-feeding, of course, you look upon yourself as a "foster-parent." You will at this period supply soaked German rape seed, which is just bursting (commencing to germinate), maw, lightly cracked canary and hemp seeds, hulled and broken up sunflower seed kernels, and seeding chickweed, shepherd's purse, and groundsel tops. Most of them will pick up ants' eggs with relish, especially if given liberally as an ingredient in a good insectivorous food. It is much better to offer them the latter moistened with milk (or water) rather than to keep on with the egg food. I believe in dropping the latter as early as is convenient, but not in dropping soft food altogether. To do so is a huge mistake. It is a most excellent plan to keep them with a liking for a feed of soft food; an occasional change on to it is an invaluable help to keeping all British Finches, especially useful during that trying period, the moult. It is surprising, too, how many Finches (I refer to adult-caught birds, now) can be induced to eat it—and ants' eggs alone, too—when milk is used as a moistening agent. British bird keepers should give the "tip" a trial for themselves. Of course, the trouble is that it must never be allowed to get tainted and sour; but that is far from impossible to compass. By the way, another sound tip is to let a motherly old hen Canary (or any other docile old bird) be in the flight cage into which the young Finches are turned; she will show them the way about. It is a mistake to turn them into an aviary, they then are apt to get exceeding wild.

Concerning Greypates.

Green 'Un.—(1) The kind of cage most suited for caging newly-caught Greypates in is a long, low one, wired in front only, and with the top made of strong canvas, if possible—very like, in fact, a catcher's store cage. Both seed and water should be placed inside the cage, and on a level with the perches—right under their noses, so to speak. If you have a hen Canary you can pop in amongst them, so much the better; she will show them the ins and out of things. A steady hen Goldfinch will often answer the same purpose well, but many of them I found inclined to "chivy" the young Goldies about. Put the seeds in hoppers running from front to back of cage (inside), at each end. You can hang a water tin outside after a time, when the birds have settled down, and they will readily follow the lead of the old bird and drink out of it. (2) If Greypates will eat a little egg food (made weak) or a high-grade insectivorous mixture, or even ants' eggs alone, I am strongly in favour of giving it them during the moult—old Goldfinches, too. Read reply to "Chaffinch" this week. (3) As I have frequently said, distinguishing the sex of Greypates is a tough job for a beginner to undertake. The colour of the wing-butt (shoulder) of an undoubted cock is often not a dense black. Quite one of the best guides, in my own opinion, is the look of the head when viewed in profile. The cock looks distinctly longer and flatter from bill tip to back of crown, the hen being shorter and more marble-shaped on the crown. This needs, of course, experience to determine. If you can get a long ("snaky," as they are termed) headed bird, with dense black shoulders, and a tinge of yellow showing on the breast feathers, you can bet on it as a sure cock. In London a very sure sign is the price; the 1/6 cocks outside the bird shops are hens, the 2/6 cocks are what they purport to be. A cock Grey is worth a certain figure, and no dealer sells them for less. The moral should be obvious. (4) You must excuse me answering this question—I am too modest.

Rearing Some Unknowns.

A. Legg.—The nests you found in the holes of a hedge-bank are those of the Redstart. Your description of the plumage of the old birds fits this species exactly (the males, that is)—viz., breast red, tail reddish at root, top of head black, with white streak right above beak and eyes, something like a Robin in build. Adult specimens make excellent show birds, providing, of course, they are extra good ones. The youngsters are not very difficult to hand-rear, providing you have the time and knowledge essential to the proper carrying out of the task. Take them when about ten days old, and feed on the lines advised "Miss A. F." this week, with egg and biscuit moistened with milk. Add, however, a good teaspoonful of best quality ants' eggs (freed from all rubbish) to the food, gradually increasing the quantity to a dessertspoonful. Don't give seed, of course, this species being insectivorous; but don't omit the occasional pinch of crushed cuttlefish, and also the mealworms, flies, caterpillars, etc. I question whether the old birds would rear them if you put them in a cage near the nesting site. In such a situation you would be likely to lose them through prowling vermin—and other prowlers, too, probably. Besides, the young would not be delightfully tame, as they would be if you hand-fed them in the usual way. Redstarts are shown in the class for insectivorous birds; among the small species if there is more than one class, among the migratory species if the classes are further sub-divided.

Bullfinches in an Aviary.

Osborne.—If you will read the rules you will find it clearly stated that queries for different specialists must be written on separate sheets of paper. Part of your letter relating to foreign birds has gone to our Mr. Page, and so I am unable to tell how large your aviary is, which handicaps me in answering. A pair of Bullfinches will certainly nest in an aviary, and then may generally be depended on to rear the young—though not always. You are feeding them but poorly; Bullies should have a feed of sunflower seed daily, and a proportion of summer rape should be present in the stock seed mixture. The green food should consist of dandelion, shepherd's purse, chickweed, and groundsel, both young leaves and seeding heads, also seeding grass; it is needed liberally when young are about. Unless the aviary is a real big one, you will be well advised to leave the couple in undisputed possession of it. When birds have had a place to themselves, they are apt to resent the introduction of others, especially when engaged in domestic duties. Try the nest-box shown in this week's "Illustrated Ideas" column. It is very like one I recommend and have found most useful—though more especially in cages. If you decide to put other birds in along with them, you could try a pair of Linnets and Redpolls with safety; probably a pair of Goldfinches. But, of course, I don't know the size of the place.

Piping Bullfinches; and a Mule.

Anxious to Know.—I thought you would find the Mule to be a Linnet-Canary. I should say the faulty song is due to his upbringing—i.e., he has never had a chance to learn a good, connected melody. You want to get a really good singing Linnet, or another Mule, or even a Canary, and let your own bird have a few months' tuition under the same, after which you will find its song very much improved. A good ordinary cock Bullfinch can be bought from 2s. upwards (fresh-caught) during the season. A piping Bullfinch (that is, trained to pipe, or whistle some tunes) will cost you anything from 30s. to £5—in fact, you cannot hope to get a good piper under 50s. to 60s. Of course, all Bullfinches have a "pipe" (natural song—if it is worthy the name "song"). Old Bullfinches cannot be taught to pipe tunes. Young Bullfinches have to be taken from the nest when six or seven days old, and hand-reared. From the time they commence to pick about for themselves, the melody it is desired they should learn has to be played over to them on a bird-organ or flute. The lessons should be given while the bird is in darkness or semi-darkness (cage covered with a wrapper.) They need to be constantly repeated the whole of the day, and a bird's education takes many weeks to complete. If you have plenty of time on your hands, and an inexhaustible fund of patience, you might produce a good piper. But you must remember that every nestling Bullie does not become proficient; the percentage of perfect pipers, in fact, is very small indeed, so that you would need to start with a dozen or two pupils. The production of piping Bullfinches is a standing industry in Germany, keeping those engaged in it constantly employed while the season is on.

A Mixed Quartette.

Harry.—If the Goldfinch roosts on the cage front, he might be cured by your getting one of those short patent perches which lock between the wires, pushing it in the cage at the spot where he clings to the wires and gently compelling him to go down on to it. Many Goldies like to roost at the highest point they can get up to in a cage. If, however, he has the wretched habit of running about over the wires during the day, fraying his tail, etc., the case is not so easy—unless the bird is a newly-caged one, when steadiness in the future may put an end to the trouble. You could try keeping him in a cage extra deep from front to back and not very high—two perches on a level, on the lines of the Finch Stock Cage illustrated and described in the 1906 Annual. Sometimes one is successful in breaking a bird of the habit by fitting a piece of glass over the upper part of the wire front, inside. Smooth off any sharp edges with very fine glass or emery paper. (2) There is no reason at all for you to think that your dandelion seed is no good simply because you did not collect it in the manner mentioned by me last week. The sample sent is good enough. I prefer myself, though, to let it ripen under natural conditions, as far as is possible, before I gather it. (3) You have nothing to grumble at, so far as I can see; it is an honour for a Redpoll to get second in a mixed class among other good birds. The judges naturally favour species such as the Siskin (all things being equal). The latter, having greater variety of marking, is more difficult to get in perfection than a Redpoll. Still, a judge who knows his business would never put a good Redpoll behind a moderate Siskin. (4) Some Redpolls are colour-fed, but pepper-feeding does not improve a Redpoll which is naturally rich in colour—is unnecessary, in fact. The leading Lesser Redpoll at the last Crystal Palace Show was not colour-fed, in my opinion. Redpolls will usually eat egg food, especially if run with a ben Canary (or other bird) which likes it; then the colour-feeding becomes easy. See also other replies last week.

Linnet with Damaged Leg.

Most Anxious.—If the fracture was in the lower part of the leg, it ought to have been easy to put on splints (made of a split quill, or toothpick). However, you can do nothing now, except wait and hope for the best. The leg may quite likely come all right. I have known many birds (even so large and restless as a Hawfinch) recover the perfect use of a broken leg which went unattended. The fracture will be thoroughly set when you read this reply (if you see him using the limb on a perch, as you say he has shown signs of doing), and you could gently catch him and massage the foot with Zam Buk ointment. The panting, I think, is merely incidental to his accident, and will cease when the bird is once again able to use its leg. Make it as easy as possible for the Linnet to get at food and water, etc., for a time. Your box cage, 12 by 12 by 9 inches, reads like an excellent cage to keep a Linnet in. As a permanent house it would be better were the length 16 inches. You ought to be able to purchase a steady, house moulted Linnet, in full song (and a good bird), for 7s. 6d. or 10s.

Concentrated Wisdom.

Shepherd's Purse (F.L.H., T.M., B.W.).—Have posted you a sample of shepherd's purse in the stamped addressed envelope enclosed.

Goldfinch Not Singing (Sambo).—You have not really had the Goldfinch very long yet (since March), and he may not be quite steady enough yet to indulge in singing. You bought it at the wrong end of the year, so this may well be the case. In the majority of cases it is not wise to buy birds which are caught on the verge of the breeding season. They are usually very wild, as you say yours was. If it has a good big blaze, extending backwards to the far edge of the eye, you can reckon it a safe cock.

Goldfinch and Linnet Mules (H.A.).—You will find hints in getting young Finches (and Finch Mules, of course, can be included) on to seed in the reply given "Chaffinch" this week, to which I must refer you. Maw seed should be freely offered; it is one of the first seeds young Mules and Hybrids pick up, and is very good for them. Ripe seeding shepherd's purse is also excellent. Sunflower seed is always good for Mules; it affords them exercise and occupation in the cracking, and so tends to obviate the feather "biting" they are prone to treat one another to.

Linnet Ailing (H.R.B.).—Your Linnet is bound to take time before he thoroughly recovers and gets on song. Give him plenty of maw seed to eat. Colour some warm water with Cuddy's Fluid to about the depth of light port wine, and bathe his eyes twice daily with this. Don't wet him unnecessarily. A piece of lint soaked in the fluid and laid gently on the eyes will be all-sufficient.

Indoor Aviary (Beginner).—You say your indoor aviary is 3 ft. long and 3 ft. high. But I cannot tell you how many birds it will hold from that; what I want to know is the width. The height matters but little; it is the floor space which determines the holding capacity. If it is 2 ft. wide it will hold six or seven small Finches comfortably; if 3 ft. wide two or three more. Feed as I advise all aviarists; see reply to "H. C. Anxious" in our issue of May 25th last. If you succeed in breeding either Bullfinches and Tree Sparrows, or Snow, Cirl, and Reed Buntings in cages, you will be very fortunate. None of the others you mention is easy, either.

Hand-rearing Missel Thrushes (K.D.F.).—You will not find Missel Thrushes hard to rear. Yes, adopt the method I advocate for Blackbirds, etc. Whether it is "worth while," you must decide for yourself. A really good specimen makes a good show bird; it makes a good pet, too; at least, I like them personally, they are so knowing, bold, and fearless. As songsters they cannot compare with either Song Thrush or Blackbird. They need a very large house cage, plenty of water for bathing, and to be cleaned out frequently.

Hand-rearing Jays (J.A.Y.).—I must confess I have not tried putting a nest of young Jays in a cage, and leaving them to be fed by their parents. Nor do I know anyone else who has tried it, and I don't remember reading of it being attempted. The method has been successfully adopted with some species, but there are always many things likely to render it abortive. Jays are very easy indeed to hand-rear, and if you follow the advice given an enquirer on Jackdaws this week you should certainly be successful.

Weeds and Herbs (Cissy).—You will find the Rev. C. A. John's book entitled, "Flowers of the Field," a very good one. A new and beautifully illustrated edition has been recently published by Routledge, price 7/6 net. Cassells also publish a useful little illustrated work on the subject, price 1/6 net. Both can be sent you from this office on receipt of price and postage.

Thistle Seed (M.G.M.).—I have looked up the scientific name of the thistle on the seeds of which Goldfinches, etc., mostly feed. It is known as *Onopordum acanthium*. Its English name is the Scotch Thistle (which sounds rather Irish, does it not?) But several other thistles bear seeds which are excellent for birds, such as the very common Marsh Plume Thistle, which grows very tall, on waste land and on the borders of fields, and carries bunches of small-sized seeding heads.

FOREIGN BIRDS.

Answered by Wesley T. Page, F.Z.S., M.B.N.H.S.

Foreign Birds for Cages, etc.

(1) How many seed eaters can I keep in an outdoor aviary 3 ft. long and high and 2 ft. wide? What is their diet and treatment? (2) I have a pair of Budgerigars in a box cage, 4 by 1½ by 2 ft. What other Foreign birds could I put with them? The birds are not required for breeding purposes. —T.C.

T.C.—(1) For whatever purpose you keep birds it is always the wisest course not to overcrowd. In your case you can keep six birds the size of a Canary or twelve small Waxbills or Finches of a similar size. Canary, millet, and spray millet, green food, cuttlefish, and water for bathing and drinking. Choose from the following:—Gouldian and Alario Finches, Grey-necked Serin, Ruficauda and Pectoral Finches, Grey, Orange-cheek, and Golden-breasted Waxbills, Common and Green Avadavats. (2) It is unsafe even in an aviary to keep Budgerigars with Finches, and I cannot advise such procedure; also I presume ultimately the Budgerigars will breed whether you wish it or not. Hang up four husks, and you could keep in the cage two pairs of either Budgerigars or something similar, either of the following combinations would answer your purpose: (1) Green and Yellow Budgerigars. (2) Budgerigars and Madagascar Lovebird. (3) Budgerigars and Blue-winged Lovebirds. The following diet would answer for either combination: Canary, millet, and spray millet, green food (grass in flower, lettuce, etc.), cuttlefish, grit, and water ad lib. Supply crushed egg shells if there are any signs of nesting. For all the birds named both answers no artificial heat is necessary, but the birds must have a light and airy position, yet must not be in a draught or they will soon "shuffle off."

Voices of Stanley Parrakeets.

Are they nice cage pets kept singly, and are they readily tamed, and possessed of pleasant voices? Are they smaller than Rosellas? What should be the thickness of perches for Parrakeets of the Rosella type?—F.C.D.

F.C.D.—I have never kept this species till just recently; they have been too scarce. Those I have seen at the Zoo and elsewhere, while beautiful birds, gave me the impression of being dull and uninteresting, but this was possibly owing to their being lost in a crowd as it were, combined with small cages in which they were confined. They are not noisy for Parrakeets, neither are their voices unmusical. They are a little smaller than Rosellas. For perches for all my birds I usually use branches. Where it is not convenient to put in a branch I use a piece of one to fit across the cage, and in this instance I should chose one tapering from about ¾ to 1 in. For Rosellas, if compelled to use ordinary perches, should choose one about 1 in. in diameter or a little thinner.

Cutthroats.

How long do Cutthroats incubate their eggs? From details given do you think I shall succeed in rearing any?—D.B.V.

D.B.V.—Thirteen to fourteen days is the usual period, so by the time you see this reply you should have a brood of young birds, that is, if the eggs are going to hatch. Cutthroats are as likely as any birds to breed in a cage, and have done so in a cage of the size you name; but kept under such conditions, unless they receive the closest attention, are very liable to become infested with insects, and their nest box must be watched for these pests. Though a Blossom-head is a most unsafe companion even for other Parrakeets, I do not think it will interfere with the Cutthroats, as the three birds, I take it, have a room to themselves. Hang up some of the Hartz travelling cages; they should be scalded first, the fittings removed, and two of the sticks cut away that the birds can have ingress and egress, also a closed box or two, with a round, or, better, oval hole (1 by 1½ in.) for entrance. Supply them with a little hay and long grass, and all should go well. I have had numbers of these birds hatched and successfully reared in my aviary, and they almost invariably fed almost exclusively on ants' eggs alone, though their parents satisfied their own hunger with the usual seed diet. An abundance of green food should be supplied at this season, lettuce, grass in flower, and any non-poisonous weeds you can procure. Note: Cutthroats after playing at nesting all the summer will often bring off a couple of broods during October, November, and December, successfully rearing them too, even out of doors.

Gouldian Finch and Canary.

L. A. Foot.—I should have said in my previous reply to you that while not impossible, success is not very probable, for one thing the Gouldian is a late breeder; at the same time I consider there is a chance of success, as the few Canaries I keep I find quite as eager after grass in the ear as the Gouldians, and they take very much the same diet in other respects.

Will Cockatoo Talk?

I have a young Cockatoo, about a year old. It is very tame and affectionate. Is it likely to talk?—COCKATOO.

Cockatoo.—Most species of Cockatoos speak a few words at any rate, and very distinctly. Yours should do so, if you keep it where it will hear plenty of conversation, also try the constant repetition of such words and phrases as you wish it to learn (see reply to another querist in this issue on teaching Parrot to talk). I should commence to train it at once, and with patience it should in a few weeks commence to utter a word or two.

What Birds?

A friend has bought a pair of little birds of the Finch tribe. Can you name them for me from the following description? Upper parts, fawn; beaks, eyes, and ear patches of male, port wine colour; breast a lovely blue; the hen has not the port wine ear patches of the male. What is their food and treatment?—CONSTANT ENQUIRER.

Constant Enquirer.—Your friend has a pair of Cordon Bleus, very beautiful and freely imported birds, but also very delicate on arrival, and consequently there are many losses among these exquisite little birds before they become acclimatised. Canary, millet, and spray millet, green food, cuttlefish, grit, and water ad lib, both for bathing and drinking. If your friend caught some live ants' eggs, or rather cocoons, and green fly from rose or fruit trees, or small spiders, it will greatly help in getting them over the hardships of importation. They must be kept out of draught, yet in some well ventilated position. They are not free breeders under any conditions, but there are one or two instances on record of their having reared young in a cage. For there to be any probability of success it should be roomy, and of the box type.

Ceram Lories.

Please describe these birds and give treatment. Are they worth while keeping?—J.E.M.

J.E.M.—I did not recognise the species by this name, as I have never noticed it before, but getting a description from a friend of their colouring it was easy to recognise them as the Chattering Lory (*Lorius garrulus*). The general colour of the plumage of this fine bird is a refulgent crimson, wings and thighs green; shoulders, yellow; beak, orange colour. This species should have for its principal diet milk sop, prepared so: Crush a plain biscuit, Osborne for preference, add a good teaspoonful of sugar, and half a teacupful of milk, boil the whole up together, and give to the bird when cold; so prepared it will keep fresh for 24 hours in the hottest weather. Do not use bread in making this sop, it is not so wholesome for the bird as the method given above. In addition, let it have as much ripe fruit as it will eat, also a little canary seed. Offer it water two or three times a day at first, afterwards it can be continuously left in its cage. It is a beautiful and gorgeously apparelled bird, but its principal attractions lie therein; but with this as with other species, what is attractive to one individual is not so to another, so that as to its being worth keeping is a matter of individual opinion. It certainly is so to all lovers of this gorgeous tribe, but their cages require constant attention to keep them clean and wholesome.

Cardinals not Rearing Young.

The young were duly hatched out, but they only lived two days. The old birds are building again, but the cock bird does a lot of mischief in the aviary. Can I adopt any other method with the next clutch of eggs? Is my food mixture correct for hand-rearing?—M. ARMSTEIN.

M. Armstein.—Your bad luck with these birds is nothing unusual; it is almost impossible to rear them in a crowd, save as a very rare occurence. My Green Cardinals hatched out five times last season and one this, and not one reared, owing to the impossibility of keeping up a constant supply of insects. At the same time, I must give them their due, so far they have neither killed nor maimed any of their fellow captives (about 50). In such a case as yours I should not hesitate, if you have not a smaller aviary you could let them occupy alone you must cage them up for a time, until the breeding fever has left them. It is possible for a Canary to rear such birds. You will find the following unequalled as a soft food mixture for any purpose:—Game meal (fine ground), ants' eggs (very best), dried flies, dried pupæ (fine ground), crushed Osborne biscuit and crumbled sponge cake in equal parts—supply crumbly moist, and for such as will not carry green food to their fledglings, a little finely-minced chickweed or lettuce should be added to the soft food mixture. You can do nothing with the Cardinals, save keeping the place alive with insects; if you are pestered with cockroaches indoors, a couple of "Demon" traps should provide them with a fair amount; leave the insects in the trap, the birds will soon find a way to get at them. With two or three of these traps you might be able to succeed, especially if you can enlist any neighbour's sympathy; merely a changing of the traps should keep up the supply.

What Parrot?

I think myself it is the ordinary Grey Parrot; it has grey back and head, red breast and neck, and when aroused it raises a little crest on its head. What kind is it? How must I feed? What would be a suitable place to keep it in?—W. COATES.

W. Coates.—It is the Australian Rose-breasted Cockatoo (*Cacatua roseicapilla*). Its staple food should consist of a mixture of oats, wheat, dari, Indian corn, canary, hemp, and sunflower seeds, in equal parts; well mix and always keep a supply in its cage. In addition you must supply ripe fruit, boiled potato, raw carrot, plain biscuit, green food, grit, cuttlefish, nuts, and water ad lib. Do not give table scraps, tea, coffee, or milk sops, or slops of

any kind. Get a large-sized Parrot cage, and it can be kept in any living room, for Parrots and Cockatoos, unless they make themselves too obnoxious by screaming, should be kept in the ordinary living room; they are sociable birds and appreciate company; they soon become very entertaining with their drolleries and mimicry. This is a hardy and enduring species, and does not need any coddling; at the same time, it must not be subjected to draught.

Birds for Cages.

I have two large cages, one containing Budgerigars the other Canaries. What kind of bright-coloured foreign birds could be kept with them, silent one preferably, and those which would thrive on similar food?—"HUNS."

"Huns."—In the cage with the green Budgerigars I advise you to get a pair of yellow Budgerigars to keep them company, and if you hang up four cocoanut husks, as far apart as possible, they should soon settle down to breeding. Two pairs will be all the cage will accommodate, and you will need to dispose of the young as they are able to feed themselves. Or if you prefer quite a change, either Madagascar or Red-faced Lovebirds would meet your case. With the Canaries you could keep Gouldian (17/6), Ruficauda (12/6), Diamond (12/6), and Long-tailed Grassfinches (10/-); Zebra and Ribbon Finches (3/6 to 4/6), Java Sparrows (Grey 3/6, White 10/-), Orange-cheek, St. Helena, Grey, and Golden-crested Waxbills (3/6 to 4/6); also common and green Avadavats (3/6 to 4/6), all per pair. To the Canaries' diet you would have to add millet and spray millet, cuttlefish, and a piece of rock salt. I cannot advise as to number, size of cage not being given.

What Lory?

Can you tell me the name of this bird from description herewith? The dealers sell them as Scarlet Lories.—FOREIGN BIRDS.

Foreign Birds.—Your birds are evidently immature and not yet in possession of their full colouring, and while I incline to the opinion they will turn out to be the Red Lory, they may be either the Blue-breasted or Chattering Lories, or possibly the more uncommon Purple-breasted Lory. However, to repeat myself, when it has moulted out I think you will find it is the Red Lory (*Eos rubra*), the Scarlet Lorry of the dealers.

Rearing Firefinches.

(1) My birds are setting on four eggs in a cage; how long do they incubate? (2) If young ones are hatched, how must I feed? (3) At what age do they feed themselves? (4) What are the external differences in plumage of Long-tailed Grass Finches? (5) Is it usual for Fire Finches to eat bread when kept in cages?—TOMMA LITEN.

Tomma Liten.—(1) Usually 14 days. (2) A mixture of crumbled sponge cake, ants' eggs, and dried flies in equal parts; make crumbly moist for use. Also supply at the period green food, twice daily, particularly such as is infested with green and black fly or other plant bugs. (3) This is very variable, they, like many other species, are fed by their parents for some time after they are able to pick up for themselves, and I should advise their being kept with the old birds till they cease feeding them. (4) The sexes are alike, but the hen is practically a silent bird; the male is soon picked out by his plaintive call. (5) It is not a common occurrence for Fire Finches to breed under any conditions; however, on the Continent they have been successfully bred in cages, and there is a reasonable prospect of your birds being successfully reared.

Orange-cheeked Waxbills.

I have a pair of thee birds, and am keeping them in a small Canary show cage. Will they breed? What food and treatment do they require?—CANNICK.

Cannick.—Waxbills are shy breeders in captivity, even in large garden aviaries, though several have successfully reared Orange-cheeked Waxbills, and yours is by no means a hopeless experiment. The cage you are keeping them in is ridiculously small, even for these tiny birds. A show cage was never meant as a permanent home for a bird. Get a double breeding cage, put a bundle of twigs in one corner, and fix a bottle-shaped rush nest behind these, and hang at the other end a Hartz travelling cage, after removing the fittings and cutting away one of the bars to allow the birds space for ingress and egress; supply hay and long grass for nesting material, and possibly you may succeed in rearing a brood of these handsome little birds. Don't be too curious as to their actions if you notice signs of building going on.

Breeding Budgerigars.

I have a pair of Budgerigars which I purchased in January. They have not laid yet, though they are very busy about the husks. The colour of the hen's cere has been changeable, but it is now turning brown again. From the details given please tell me how to proceed.—ANXIOUS.

Anxious.—You have no cause to be anxious; a single pair of these birds often take quite a little time to settle down to nesting, but once they begin, brood after brood are reared in rapid succession. When the hen goes out of breeding condition her cere becomes bluish; when it is deep buff-brown, then she is in condition and likely to begin nesting promptly. There is no need to interfere with the husks; let them remain as they are; after they have played about with several they will make their choice, and settle down in earnest to reproduce their kind. If you think they are a little "off colour," for the next fortnight just colour their drinking water with Parrish's Chemical Food; let them have as much grass in flower as they will eat, the same as to cuttlefish and crushed egg shells.

Birds for Outdoor Aviary.

I enclose sketch of aviary; it is 20 ft. long by 8 ft. wide. (1) What ventilation is required beyond the window shown? (2) How many birds will it accommodate? (3) Is my diet correct for list of birds enclosed? (4) Does the house require painting inside, mine is a damp district, if so, what shall I use?—NORTHERN DURHAM.

Northern Durham.—(1) Your aviary is well arranged, and you will need no further ventilation than to leave the flight holes open night and day. (2) You have accommodation for about 80 birds in your aviary, but I should not put in more than half that number at first, the less you crowd the brighter are your prospects of successful breeding results. You would find pairs of Gouldian (17/6), Ruficauda (12/6), Pectoral (10/-), Yellow-rumped (10/-), and Long-tailed Grassfinches (10/-) add greatly to the beauty of your collection, as would also the distinctive Diamond Dove (10/-), all per pair. (3) Your diet is ample for all the birds named. One thing is lacking, however, you should give a few mealworms or other insects occasionally, also scatter some ants' eggs on the ground for them. Do not trouble about boiled maize, the Lovebirds have an all-sufficient dietary. I am afraid sooner or later you will find them dangerous company for your Finches. Spruce branches and pea or bean sticks make excellent furnishing for the aviary. (4) Paint the house inside with Hall's Washable Distemper, and give your wire netting a coat of Brunswick Black.

Parrot with Overgrown Beak.

The upper mandible grows to an inordinate length, then chips away and falls off. I used to feed on table sops and Parrot mixture, but for the past two months have not been giving any sops. How must I treat?—MUDDLE.

Muddle.—Your best course is to give this bird plenty of cuttlefish; always keep a piece hanging in its cage, also a branch of some non-splintering wood and cotton reels to chew up and exercise its mandibles upon. If the abnormal growth of the beak interferes with the bird taking its food, then you had better let a vet. trim it off for you. But if it keeps hearty, and does not get thin, leave it alone. You have done right in stopping the sop; mix your own mixture—equal parts of oats, wheat, dari, canary. Indian corn, hemp, and sunflower seeds. Also supply, for variety, ripe fruit, nuts, plain biscuit, green food, cuttlefish, grit, and water ad lib. Do not give table scraps or slops of any kind. Before I can name it for you, you will have to let me have a few more details as to its plumage. What is the colour of its head? Has it a ring or collar round neck? Is its tail long or short?

Sexing Pekin Robins.

I have two young birds, at present they have no song, only a sort of rattle. As they mature, how can I sex them? Is my diet correct? Will St. Helena, Orange-cheeked, and Crimson-winged Waxbills escape through half-inch mesh fronts? What is their value as imported.—NOVICE.

Novice.—As these birds mature you will soon recognise them by their song; they will certainly utter it if they are males. The beaks of the males are a deeper red than those of the females; the males also have the eye region, top of head, and the yellow, etc., of the underparts deeper and richer in colour than those of their mates. Your soft food will answer well enough, but you must supply as well such ripe fruit as they will eat, also live insects, mealworms, or such earwigs, beetles, smooth caterpillars, spiders, etc., as your garden or hedgerows supply. Half-inch mesh wire netting will confine Waxbills, even the tiny Zebra Waxbill. Sometimes ½ in. is sold as ¾ in., and through this the smaller species might squeeze. The Crimson-winged Waxbill is worth 12/- to 15/-, the others 3/6 to 4/6 a pair.

Are Bronze Mannikins Amiable?

In an outdoor aviary I have Lavender Finches, Green Avadavats, Waxbills, and Bronze Mannikins; the latter chase the others about and peck at them. Will it be necessary to separate the birds? Are the Mannikins likely to breed, they seem anxious to nest? Do Lavender Finches breed in this country? Is there another name for Golden-breasted Waxbill?—E.F.

E.F.—The Bronze Mannikin is at all times well able to look after itself, and apt to be decidedly aggressive if it is kept in at all confined quarters, or if these are overcrowded. I should advise you to cage them (the Mannikins) up separately in a double breeding cage, supply them with hay, long grass, etc., and there is a probability of their breeding. They have done so under similar conditions. Lavender Finches have been successfully bred in several aviaries in this country, but such occurrences are by no means common. The Golden-breasted Waxbill is also known as the Zebra Waxbill.

Java Sparrows, Doves, etc.

(1) I have a pair of Grey Javas, and notice some difference in their beaks. Is this sexual? Where do they come from? What time of the year do they breed? (2) I have just a pair of Cutthroats; will they breed, and what time will they probably commence? (3) What size are Green Singing Finches? Are they easy to breed in a cage? Have they good song? What are the sexual distinctions? Are they hard to acclimatise? (4) Are Zebra and Diamond Doves delicate, and will they agree with Finches? Would they breed flying loose in room?—IRISH TYRO.

Irish Tyro.—Speaking generally, and not of any dealer, the cheaper birds are those only just come to hand, or the roughest in plumage out of a given consignment. For preference, I should myself get them as soon as they come over, and before they have spent much time in crowded shops, and only accept birds in good plumage, if I had to pay a little extra for them; even with this precaution there is always a percentage of losses with such purchases. (1) The Grey Java Sparrow is a native of Java, Sumatra, and Malacca; it is also found in many other countries where it has been introduced. The wild caught birds sometimes occupy large outdoor aviaries for years without nesting, but if you cross they with the white variety, a free breeding strain is produced, and the progeny are mostly pure Greys, with a very small percentage of pied specimens. At first they usually nest late in the year, September, October, or even November. (2) The Cutthroat is a free and yet somewhat erratic breeder, and will not, I suppose, attempt to breed till August, September, or even later. (3) About the size of the English Siskin; they are as likely to breed in a cage as in the aviary, but they are shy breeders, and comparatively few aviculturists succeed in breeding them. The sexual differences are infinitesimal; the hen is a slightly duller coloured bird, and even this slight difference would only hold good when those compared are somewhere about the same age. The hen Saffron Finch is a much duller bird than her mate; you can always pick out the male by his rich saffron cap. They have a song, but it is somewhat similar to saw scraping; they have bred both in cages and aviaries; they are late breeders. (4) Both these Doves are hardy. There are a pair of young just on the wing at present in my outdoor aviary; considering the weather we have been favoured with of late, this shows that they can stand almost anything. The Diamond is a lovely study in greys. Your birds would certainly be better flying loose in the room, but you must not mix the Budgerigars with them.

Budgerigars and Java Sparrows.

I have an aviary, 3 by 2½ by 3 ft. high. What other birds that are fairly free breeders could I put in with them? In another cage I have Java Sparrows. How can I tell the sexes? One of them seems in rather a sorry condition, how can I treat it?—LANE HEATON.

Lane Heaton.—You will find the first part of your query answered in our reply to "Huns" in this issue, to which I must refer you. Permit me to remind you that if you keep Budgerigars in a cage with Finches, sooner or later the Finches will suffer. The injured foot is partly the cause of the bird lying on the perch; it is certainly in a very bad condition, and if it were mine I should chloroform it out of the way. At any rate, it should be caged separately, so as not to infect the others. Make its drinking water quite saline with Epsom Salts for one day, and afterwards well colour the drinking water with Parrish's Chemical Food. Even if it recovers, I fear it will always be a poor creature, and somewhat of an "object."

Use our Picture Postcards.

Budgerigars Breeding.

(1) I have made my C.P. cage into a box cage by fastening thin boards round it. Will this answer well for breeding? (2) Should the sexes be kept separate till they are in breeding condition? (3) I have been troubled with parasites, have used Keatings, and put quassia in their bath. Is there any other remedy?—NEW START.

New Start.—(1) Yes, providing the joints of the wood are close, the cage will answer well enough, in fact, be as good as a box cage. (2) No, unless you want to stop breeding for any special purpose, leave the birds together. (3) Budgerigars do not bathe; they should either be dusted with Keating's or sprayed with quassia solution. Your cages should be scalded out and thoroughly cleansed, so as to eradicate these pests. The birds cannot do well while they are being eaten up by vermin.

Greenfood and Rock Salt.

(1) Are dandelion leaves good for Foreign Finches and Waxbills? (2) Is rock salt good for the same birds? I give cuttlefish, but I am told rock salt is good for Gouldians and other Finches.—B.C.

B.C.—(1) Yes, but there should be a change in the green food. Ring the changes on chickweed, grass in flower, dandelion, tender lettuce, and any wholesome garden weeds. (2) You have been correctly informed; rock salt is very good for Gouldians and any birds that will take it; its surface should be moistened several times daily.

Porch Aviaries and Birds.

(1) I am giving you full details of my aviaries, birds, and their diet. Can I improve either on the diet or construction of the aviaries? (2) What other birds could I add, and what would be their cost?—FOREIGN.

Foreign.—So long as the glass sides are draught proof the birds will do well enough, and I cannot suggest any improvement on their construction, but no birds can stand draught, and if this exists you must adopt some means to eliminate it. Your food is satisfactory, but in place of the soft food you are using I recommend the following:—Crushed Osborne biscuit, crumbled sponge cake, ants' eggs (best), and dried flies, in equal parts; make crumbly moist for use. There are several replies to other correspondents in this issue which should help as to food and treatment of given birds. Choose additional birds from those in our list in replies to "Huns" and "Northern Durham" in this issue. Six pairs in each aviary would be far better than crowding in more. The only doubtful point about your aviary is, can you make it secure against draught. If you sent me a rough sketch I could give you a better opinion on the matter.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Gouldian Finch (Mrs. Foot).—Softening of liver, then inflammation of that organ and of the lungs caused death of this pretty bird.

Hen Canary (Mrs. Elliott).—This hen, and possibly your other two, died of inflammation of the liver, spleen, and lungs, indicative of fever.

Goldfinch (R. G. Clark).—This bird died of chronic liver disease and acute inflammation of the lungs. I fancy it must have wintered in a warm room and lived well on rich food and under such conditions a transfer to an outdoor bird room would be likely to give it the inflammation of the lungs of which it died.

Cock Canary (M. Fisher).—This bird, although in high breeding condition, had well-established liver disease, then inflammation, involving the lungs and spleen, ending with rupture of large blood vessel. These are symptoms of "bird fever," so disinfection is suggested.

GENERAL.

Answered by the EDITOR.

Supplements (I. T. Cutting).—You have done well, sir, and deserve our best thanks.

Names and Addresses (S. Mayall).—We have dealt with your communication under another column.

Singing Matches (T. Summers).—Your members cannot read their paper carefully. We have published every report you have sent us.

Would Like to Know (W. J. Salmon).—Such questions cannot be answered through these columns.

Chaffinch's Nest (W. L. Murray).—Many thanks for sending so excellent a photograph and interesting accompanying notes, which we shall hope to publish at an early date. We shall be glad to have the other photo you mention, if you can secure it.

O.P.

These magic letters spell joy to the Publisher's heart !!!

They mean that the demand for a paper or magazine has been so great that the supply is exhausted. Such is the case with the latest issue of

THE BIRD WORLD MAGAZINE.

We have no more copies left in this Office. But don't despair—

TRY YOUR NEWSAGENT.

OUR CANARY BREEDING COMPETITION.

See Back Page this Week for Full Particulars.

SIR,—1. Concerning the classing of the competition, I am not very clear about the dates—viz., July 15th and August 17th. Does it mean that the last batch of birds must be hatched before or on July 15th, and be then allowed to run up to the last-mentioned date in order to give them a chance of reaching the perch and so look real birds, knowing, of course, from this how many actually lived out of last nest? (2) What check will there be to guarantee none were hatched after July 15th? (3) I have had three visits from our sec.—(1) before commencing breeding, (2) nest hatched out, (3) second sitting of eggs—and he will visit again soon. I trust every novice is having this searching out. I think you need to be very strict indeed. I forgot to ask sec. if I needed any form to fill in addition to sending in coupons. —MARKHAM.

[Our correspondent has evidently overlooked the fact that each competitor is required to fill in a declaration form, and to get two responsible witnesses to testify to the accuracy of the statements made in that said form. If he will turn to the particulars of the competition published this week, he will find therein given extracts from the declaration forms (competitors' and witnesses'), and which will explain away question 1. It is, of course, "real" birds (i.e., "successfully reared" ones) which alone can count. 2. "Markham" can rest assured that everything possible will be done to establish the bona-fides of winners in this competition. 3. It is wise of all novices to seek such corroboration of their breeding operations as "Markham" is doing, for such, of course, will be all in their favour should the results put them in the running for one or other of the prizes.—EDITOR.]

SIR,—Would you allow me to join your competition as a novice? I don't know of any bird fancier around here. You see I have to work seven days to the week, and what little spare time I have is all occupied by my birds. I am thinking of joining the Wigan and District Cage Birds Society for the Young Bird Show on June 29th. If eligible, please forward form and oblige. I have got three different persons to buy CAGE BIRDS this last three weeks, and they like it very much.—GEORGE RHEAD (Pemberton).

[Our correspondent is, of course, quite eligible, and declaration form has been duly sent him. He should get in touch with the secretary of the Wigan C.B.S. at once. No doubt one or other of the fanciers belonging thereto will help him in regard to conforming to the conditions of the competition.—EDITOR.]

SIR,—This is my first year at breeding, and I can qualify for the competition according to the conditions; but there is one thing of which I am in doubt. One rule reads that the results must be certified by an official of some C.B.S. Now, the stock I am breeding with are Rollers, and there is no Roller club in this district; but the gentleman that supplied me with my stock is a member of the English Roller C.C. (but not an official), and also a tradesman, and I could get another who is a member of a local C.B.S. (but not an official) to certify to the results. Would their signatures meet with the conditions you impose upon competitors? Have only been taking in your paper since the middle of January, but the advice given in it by your leading writers has brought me such good results up to now that I am anxious to test my success along with others that are only beginners like myself.—ROBERT PERRY (Hyson Green).

[We shall be pleased to enrol Mr. Perry as a competitor. The gentlemen he mentions would seem to fulfil the requirements of the rules.—EDITOR.]

I have six young ones out of 30 eggs. This is not very good, but I think I am lucky to get these; it has been such bad weather. Who is the nearest person to apply to as a member of a society near Stoke?—T. CALTON, 66, Clarence Street, Basford, Stoke-on-Trent.

[There are societies at Hanley and Stoke. The secretary of one of these will doubtless give Mr. Calton a call.—ED.]

In reference to your Canary Breeding Competition, the members were unanimous in thinking you have taken a step in the right direction. The only objection they have lies in rule 1. The opinion was expressed that if you had defined the "novice" as one who had been breeding, say, two or three years, it would have induced more to join the competition, and brought them in touch with local societies. In short, the members wish the competition every success, and thank you for your effort to try and swell the ranks of cage bird societies.—W. H. BAMSEY, Hon. Sec. Derby C.B.C.

Please forward competition form, as I intending trying, but there are no cage bird societies or any official I know here, being sixteen miles from town (Haverfordwest). What am I to do in that case? I hope to be able to join a bird club when I leave here next year, and go into the hobby properly. I have to entirely depend on your paper for news and advice of the hobby.—G. ROBERTS, St. David's.

NO RATS SEEN since using Danysz Virus six months ago; see testimonials; Single tubes, 2s. 6d.; three tubes, 5s.; Post free from DANYSZ VIRUS, Ltd., Box 74, 52, Leadenhall-street, London, E.C. Harmless to other animals. No inconvenience from dead rats.

AN EARLY FEEDER.

SIR,—I would like to inform Mr. Andrew Wilson that I had a nest of Norwich, three ticked and one clear, hatched on May 7th, and a nest of Crests, one clear Crestbred and one clear-bodied dark Crest, hatched on May 7th; and to my surprise both the clear ones in each nest are feeding the others. I have just set both pairs again to-night. I might just state that I am only a novice, this being my second year at breeding, and all the information I have had has been from your valuable paper, CAGE BIRDS, which I wish every success.

GEORGE COWLES.

THE GREAT GLASS HOUSE.

SIR,—In reading CAGE BIRDS I came across an announcement that the L. and P.O.S. are going to hold a Members' Show at the Crystal Palace. I thought the Crystal Palace Company had put a stop to the different societies holding their shows there, and would only have the one show a year, the great Grand National, so that if a fancier did have the honour of taking a prize there, it would be an honour to him, it being a All-England Show. The L.P.O.S. have a date—what society is going to be the next? There will be a glut of first and special Palace birds in the sale columns of CAGE BIRDS next year. Perhaps other fanciers will kindly give their views on this matter?

G. H. NEAL.

NORWICH PLAINHEAD CLUB FOR NEWCASTLE.

SIR,—In reply to Mr. Hay's letter, none of the societies named by me are confined to the City of Newcastle, but are open, so far as I know, to the Northern Counties as well. He also asks if the proposed Norwich Plainhead Club is to be confined to the City of Newcastle? This will lie entirely with the members of the society when it is formed. I don't consider myself justified in taking anything concerning the society into my own hands, but will endeavour, when it is formed, to do all in my power to encourage Norwich Plainhead fanciers to do what they can to promote the interests of the bird for which the society is formed. Referring to Mr. Hay's questions relating to co-operation, etc., I must answer them the same as above. Trusting Mr. Hay and his fellow-fanciers will assist me in forming what might prove to be one of the most successful societies in the Kingdom. So rally round, you Norwich fanciers, and let us have a real good muster for a start!

L. STONE.

296, Simonside Terrace, Heaton, Newcastle-on-Tyne.

B.B. & M. CLUB FOR BRADFORD AND COUNTY OF YORKSHIRE.

SIR,—As a British bird lover and exhibitor of long standing, I should like to ask the gentlemen responsible for the formation of the above club a few questions. In the first place, would it not have been better if they had advertised the fact that they intended forming a club for the whole of Yorkshire, and given all Yorkshire British bird and Mule fanciers an invitation to be present? Is it not a fact that the rest of Yorkshire contains more British bird fanciers than there are British birds kept for exhibition in the whole of Bradford and district? Can they say what proportion of the 21 gentlemen who have joined the club are now, or ever have been, to any extent exhibitors of British birds or Mules? Can they give outside fanciers a guarantee that the above club will be worked independent of the Yorkshire Union? Is it the intention of the committee to encourage their members to support shows held outside the Bradford district by societies not members of the Yorkshire Union? I think I am entitled, as a Yorkshireman, to ask the above questions, and if they cannot be answered satisfactorily I shall think that the Bradford fanciers, in calling a meeting and adopting the above title, have overstepped the mark.

F. KING.

PECULIAR ANTICS OF A YORKSHIRE HEN.

SIR,—I have had an experience with a Yorkshire hen which I understand from experienced fanciers is an exceptionally rare occurrence. I paired this Yorkshire hen the latter end of March, and the first nest she laid two eggs on one morning, one of which was only partially shelled; and laid one egg on the two following mornings. I allowed her to sit on the three full shelled eggs, and she hatched out one young bird, which died the following day. I kept her caged off by herself for eight days, then paired her up again, just to get the same result as the first nest, the eggs in this case being clear. I then wrote to CAGE BIRDS seeking advice, and was advised to feed her on not too stimulating a diet for next round. I caged her off and worked to the reply I had received for three weeks. I then paired her again, and this time I have had a worse result. This unfortunate hen laid two eggs on the one morning, one partly shelled, missed the following morning and the next morning again laid two eggs, one partly shelled. I would feel obliged if some of your readers would let me know if they have ever known of a similar case to this. I may state in conclusion that the bird is very lively and seems to be in perfect health.

BLAIRHILL.

PARASITES ON CANARIES.

SIR,—Mr. F. Proctor tries to give your readers the impression that I have known about grey lice infesting birds for a few weeks only. He is mistaken; I have known and used the remedies I mentioned for six years, first finding the value of them when I kept Larks. I had a great deal of trouble to keep them clean, and I used the remedies that are still recommended by CAGE BIRDS' experts—viz., quassia and powder, and which are the same as those recommended by Mr. Proctor in his paper. I thought my room was entirely free from lice this season until Mr. P. mentioned having seen one or two on a pair of birds that he had from my room. I then looked over my stock and washed all the birds I found them on—five in number—and I have not seen one since, and it is not for want of looking for them. As for what Mr. P. says about quassia killing these lice, and all of them, in such a short time, and only one application, I know for a fact that it will not. I have used it often enough. If you have a special brand, Mr. Proctor, send me a little up, and I will try it for myself as soon as I have a chance. As to its being a good tonic, I never said anything against that. Again, Mr. P., allow me to tell you that the lice were dead at the ends of the feathers. I put some under a magnifying glass to make sure, and they were not eggs. Another word, friend Proctor, why not try the way I have told you of, and then comment upon it from actual experience?

R. ALLEN.

THE TYPE OF THE NORWICH PLAINHEAD.

From the N.P.C. Secretary.

SIR,—I have read the report of the Southern Norwich Plainhead Club meeting, which I regret to notice was not a large one. But it appears to me that it is a difficult matter to get some fanciers to a meeting, be it ever so important, unless their birds are close to them. I notice one of the speakers is reported to have said: "Let the judges submit their own ideas, and let them decide which they will judge to," and further on he says: "Once get the judges into line, then the breeders must come into line, or they will not get into the cards." When I read this it reminded me of a turf scandal some years ago that was brought into court. After a lengthy trial of some days, the judge said something like the following:—It seems to me that the owners are the gentlemen who pay all the expenses in keeping up the establishment, the trainers are the men who train the horses to win the races; but the jockeys are the masters of the situation. They can say whether a horse shall win or not. And this is what is going on to-day in the cage bird Fancy; but in my opinion it is wrong. The exhibitors are in line; it is the judges that want getting into line. The breeders know a good Norwich when they see one, and try to breed to it; but they are upset by the judges, who judge on different lines, and the latter will be followed by the new judges who take their places in the near future. But if all the breeders fix on one universal standard, with a scale of points, it is the duty of the judge to judge to it, and not to his own ideas. I was pleased to see the Southern Club has adopted the standard of excellence decided on by the Scotchmen, which is practically the one the N.P.C. issued at its formation some 10 years ago, so that the three clubs are agreed on that point. I also notice they have accepted the same scale of points as our friends across the border. At the last meeting of the committee of the N.P.C. I had a copy of the Scottish P.C. scale, but did not say what the various points were until my committee had put theirs on paper. On comparing them we found a little difference, although done a different way. Here is our scale:—

Head and neck	25
Chest	15
Back	10
Quality	15
Wings and tail	15
Colour	10
Staging and condition	10
Total	100

I purposely avoided sending this to the Press or to the Southern meeting, so that the latter might form its own idea, and, if widely different, to arrange to have them brought nearer. But as things have turned out, possibly when my committee meet again to confirm those figures and fill in details, they may consider the very slight difference that exists. Then surely the judges will recognise it? In answer to several inquiries as to whether the committee would consider any model or drawings sent, I wish to say that anyone may send drawings with a scale of points on to me, which will be welcomed by the committee at their next meeting. Referring again to the triangular contest, I am still hoping that the N.P.C. will have the pleasure of meeting both the other specialist Norwich clubs to see which is to have the coveted honour of staging the best birds.

J. RAYNES.

Hon. Sec. Norwich Plainhead Club.

NEWLY-FORMED LONG EATON AND DIS. C.B.S.

SIR,—A meeting was held on June 1st, at the Bull Hotel, to see if it was possible to form a club for the interest of all Canary and British bird fanciers. A good number of smiling faces turned up, including some well-known fanciers round about the district. A few rules and regulations were read out, which were agreed to be left over till the next meeting, which it was decided to call on June 15th, to commence at 7 p.m. I hope all fanciers throughout the district will rally round us, and let us have in Long Eaton what is wanted—a thorough good honest society.

W. HALLAM.

NORWICH PLAINHEAD CLUB FOR WALES.

SIR,—I have often been spoken to on the above subject, and I do not see why it could not be made a very successful club. I know of several who would be glad to see such a club started, and I have been waiting to see a few lines from some Norwich fancier more able than myself to bring this matter on. Now that it has been brought forward I hope to get the support of all Norwich Plainhead breeders and exhibitors in Wales (of course, I mean the whole of Wales, Monmouthshire included). I shall be glad to hear what my brother Norwich fanciers have to say on the matter, so that this may be started without much loss of time.

J. W. DUMMETT.

17, Penarth Road, Cardiff.

NORWICH FANCIERS AND THE DISQUALIFIED GREEN CANARIES.

SIR,—The enclosed letter has been received by Mr. Deacon. It is a report of the meeting held by the Norwich Society on the Palace Disqualification Case on the report by Mr. Freestone, the C.B.U. representative on the Council. Mr. Stewart sent his bird for Mr. Freestone to show the members of his district. If you think it would be of interest to your readers you are at liberty to publish the letter.

S. HANWIN.

DEAR MR. DEACON,—I sent bird off by 9.50 train this morning. Hope he has arrived safe. We had a fairly good meeting of Norwich fanciers last night considering this is holiday week. After giving in my report of the Council meeting at Manchester I produced Mr. Stewart's bird for their inspection. Mr. Stark, Chairman of the Norwich Alliance All-England Association, and Mr. Payne, of Messrs. Payne and Bennett, of Norwich, thoroughly examined the bird with the others looking on. I did not allow any feathers to be taken out as suggested, as the square and jagged feathers were so plainly to be seen I did not think it was right. After a thorough examination, they one and all came to the conclusion that the feathers were a natural growth. Messrs. Stark, Payne, Nichols, Cullington, Fish, and others, all old and well-known fanciers, in the discussion that followed after, gave their opinion that it was not possible for any man to trim feathers like it. They thought it was very likely produced by inbreeding. Mr. Fish, one of our best Norwich Plainhead breeders, then produced some feathers that he had that day taken from the back of a heavily variegated Norwich buff hen, last year's bird, and some of the feathers were square and jagged, but not so bad as the Yorkshire Green sent. This morning another fancier, a Mr. Miles, St. Andrew's, Norwich, who was at the meeting, brought me some feathers to look at that he had just taken out of the back of a Norwich Green hen that he bred last year. I have enclosed same for you to look at. They are a little bit jagged. Several of the Crest breeders said that square and jagged feathers were often found on young Crest and Crestbred birds. A resolution was passed unanimously thanking Mr. Stewart for his kindness in sending the Yorkshire Green, also sympathising with him in his disqualification through no fault of his own. I also thank you on behalf of my Association for all the trouble you have taken in the matter.—Yours faithfully,

W. W. FREESTONE.

THE CRESTED CANARY CLUB AND THE C.B.U.

SIR,—I had no intention of referring to this question again. If a "Country Member" expected me to reply to his letter in your issue of April 27th, I may say that I have nothing to add to what I have already written, and see nothing in his letter to cause me to alter the firm conviction I feel on this matter. My object in writing the letter which appeared in your issue of April 20th (at which time I can assure a "Country Member" my head was as level as usual, my mind perfectly tranquil, and bearing animosity towards no man) was to draw the attention of my fellow-members to the importance of well considering such an important matter before voting, and I gave my opinion as to what the result would be if given in the affirmative. A "Country Member" thinks otherwise than myself; it is now for the members to decide. What has been said will probably be food for reflection. I am not hostile to the Cage Bird Union. For that reason I am somewhat handicapped in putting in a lucid and more intelligible manner my reason why, at the present time, the C.C.C. should not be affiliated. If a "Country Member" is the gentleman I take him to be, the work of the C.B.U. during its existence, and what is being done at the present time, should make my motive obvious to him. I have had too much experience in public matters not to see beyond the surface which a "Country Member" holds as good and sufficient to veto my wrong-headed views. It is pretty certain that if affiliation takes place, the numbers of the C.C.C. will be considerably reduced. The question arises, is the sacrifice worth the experiment? I say decidedly, No. The C.C.C. has been able to manage its own affairs up to the present, and will be able to do so in the future. If the C.B.U. wants the support of the C.C.C., let it first show its ability to deal with matters in a satisfactory manner and gain the confidence of the Fancy at large. Whether its financial condition will permit it to bear heavy costs in a law suit better than the C.C.C. remains to be proved. Whether its rules are better also wants confirmation. Lawyers differ in opinion, and, like doctors, when they do, who is to decide? On line 19 of a "Country Member's" letter he says: "The C.B.U. does not set out to be a governing body to the C.C.C."; and yet in line 98 he says: "But the C.B.U. as a governing body to the whole Fancy." If the whole Fancy, surely this includes the C.C.C.? In a "Country Member's" opinion it may not be so in theory, but for all practical purposes I maintain the C.B.U. becomes the governing body of the C.C.C. To say otherwise is ridiculously absurd—e.g., the C.C.C. permits the under feathers of the Crest overhanging the bird's eye to be cut. Assuming that a judge disqualify a bird found in this condition, the owner appeals to the C.C.C., the judge to the C.B.U. If the latter upholds the judge, whose decision is final, where then does rule 2 come in, and the importance I attach to it? The day the C.C.C. becomes affiliated with the C.B.U., and its delegates enter the sacred precincts of the inner circle, they become as a snow man before "Old Sol." It is a matter for comment that all the pros on the question have been anonymous, and the more significant to sign as Country Members; one would imagine that the C.C.C. was a London club. If persons desire anonymity, they must be prepared to have constructions placed on their nom-de-plume; rightly or wrongly, they must bear the onus. The letter in your last issue, signed by "Another Country Member," throws a new light for the need of the C.B.U. It may be a matter of opinion; at the same time signs are not wanting that the socialistic tendency towards legislation is having a marked effect on the finance of this country. By all means introduce socialism into the cage bird Fancy and watch the result; it will be interesting. Who will suffer most remains to be seen. It has often been the poor breeder who has sold the winner, and been glad of the money. Surely even a socialist has a right to a return for his money?

W. E. GREEVES.

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries:—

House's Canary Manual

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL."

The following Summary of Chapters, etc., will show you how completely the ground is covered —

Aviaries and Cages. Show Cages. Perches. Breeding Canaries. The Young Birds. Food for Nestlings. Hens Refusing to Feed. Sweating Hens. Young Birds Dead in Shell. Red Mite. Clear Eggs. Moulting. Exhibiting. Diseases treated very fully. Every variety of Canary is treated upon at length and illustrated.

MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

MAESTEG AND DIS. C.B.S.

SIR,—I am very pleased to say we had a very successful meeting at the Oddfellows Hotel on May 29th, and that the fanciers who attended decided to form a society, to be called "Maesteg and District Cage Bird Society," with an annual subscription of 2s. 6d. We have a good many members already enrolled, and hope to have more at our next meeting. The chairman is Mr. Richard Treharne. Mr. John Bowen was appointed Treasurer. All fanciers in the Maesteg district are invited to attend our meetings.

W. JENKINS (Sec. pro tem.).

48, John Street, Maesteg.

A STAFFORDSHIRE RAMBLE.

SIR,—A party of Walsall birdy men, including the writer, went for a drive on Whit Monday to that well-known village, Brewood. Though the weather was not as we should have desired, the outing proved a very enjoyable one. We went round the village, admiring the fine old timbered houses and the ancient church, which quite charmed us with its majestic appearance. After seeing all we could in the village, we strolled through the beautiful winding lanes on a bird-nesting competition. We had heard from a good source that the place was an ideal quarter for a large variety of bird life. This soon proved to be true indeed, for the total of nests found were just 61, ending in a draw between J. B. Hawkes and E. Dickinson with 20 each. We were deeply interested and delighted with the variety found, which included the following:—Thrushes, Blackbirds, Robins, Hedge Warbler, Whinchat, Yellowhammer, Greenfinch, Chaffinch, Brown Linnet, Bullfinch, and one Goldfinch. Most of them contained eggs or young. One nest in particular came in for special comment—that of the Whitethoat, with eggs. This being placed in a bank, under a small bush, was an ideal nesting place, and well worth the focus of the camera. After tea we started for home, which we reached in safety, each expressing himself satisfied with the outing and delighted with the time spent among the birds in their natural haunts. A suggestion was made that the writer send report to "C.B.," a paper we like so well, and of which we are all interested readers, so that our local fanciers may go and see Brewood, not only for itself and surroundings, but for the bird life of the place, which they would not fail to enjoy.

A. HAWKES.

A DAY AMONG THE WILD BIRDS.

SIR.—Myself and a friend took train on May 19th for Hildenboro' for a ramble. On arrival, we entered a small spinney by the roadside. Our first find was a Jenny Wren's nest, in a bush about 6 ft. from the ground. Just at entrance to the nest were two flight feathers brought from the farmyard near by. One had the quill end inside and the other was outward, making a good entrance to the nest. Two feet underneath was a Blackbird's nest containing four young, about two days old. We found a Chaffinch sitting on four eggs; she sat very close. The nest was built in a fork of furze; we had a good view of the hen on the eggs. Thrush, Blackbird and Greenfinch followed. We heard the Cuckoo, and away to the left we could hear a Goldfinch with its pleasing song. We were met by a farmer, who questioned us as to our movements. We told him we were out to gain a little information on bird life. He seemed interested, and put to us rather a knotty question, which we had to admit we could not answer. He asked us if we could tell him how it was one never heard two Nightingales singing at same place and time? He said he had never been able to find it out, although he had been brought up among them all his life. Perhaps some of your many readers could answer it for him. He put us on to a good spot for Linnets and Goldies and Bullies. He gave us an invitation to look round his farmyard and garden—a very nice spot, looking right over into Tonbridge and Bidborough in the distance. In the garden hedge we found Chaffinch, Blackbird and Thrush nests, and in a little shrub, which he said he passed several times a day, we found a Thrush's nest with four young, almost about to leave the nest. He took us into his porch to show us where a Blackbird had reared a nest of young last year. There was the nest, and on looking inside we found that a Robin had taken possession of it and laid five eggs. We took leave of our new-found friend, Mr. Holmes; but his two young friends took us over a field to a place where there was a lot of furze bushes, and showed us Chaffinches, Linnets, Blackbirds, Thrushes and Greenfinches galore. It was most deafeuing to stand and hear the song from them. I might say that Mr. Holmes told us that there was not half the number of Peewits about as usual, but we saw a good few. Here our young friends directed us into an orchard. We soon found our much-sought Goldies and Bullies. In a small apple tree was a fine Goldfinch singing to his mate, who was sitting on five eggs. About 30 yards away was another pair busy building. Near by a fine Bullfinch was sitting on two eggs. The rain began to fall rather heavy, making it very wet to get among the hedges and bushes, so we made our way back through to village of Hildenboro', calling for dinner. Afterwards, walking by the River Medway, we heard the Nightingale at its best. Walking down the riverside and over the fields, we came to the Tonbridge Old Castle grounds, where there is a very fine rookery, with plenty of young leaving the nest. Here we had tea, and left Tonbridge by seven minutes past eight train, arriving home about 10, having spent a very enjoyable and profitable time among the bird life.

E. MEADES and E. JORDAN.

INFORMATION WANTED ABOUT A CHAMPION GREENFINCH.

SIR,—On looking back at an old number of CAGE BIRDS, dated February 23rd, I came across an advertisement on page 152, in Hardbills, where Mr. D. J. Gardner states that "the champion Greenfinch now in the possession of Mr. Howe was caught and supplied by him." I should like to know which Mr. Howe he meant.—R. J. HOWE.

THE SCOTCH FANCY MODEL.

SIR,—Many thanks, Mr. Harrison, for your interesting and straightforward letter. All along your letters on this important subject of a Scotch Fancy model have had the tone of honesty of purpose and the betterment of the Fancy, the Scotch Fancy in particular. A little more of this spirit is what is wanted. It appears to be a scarce product. There are one or two items in your letter that require explanation, and I, like a few others, look to the Committee elected to answer these items. There is not the slightest doubt that a mistake has been made on this model question. An all-important question that must be settled between the two types, smooth and tight feather, or rough and full feather. Which is it to be? If there is no solution of the difficulty then I suggest have a class for the rough, heavy feathered type, and call it Dutch Fancy, or what you like, but do not call it Scotch Fancy, for, in my opinion, it has no claim to it. Let us have judges who have the courage of their opinions. Give them a model to base their judgment on; then, and then only, shall we be able to clear the air, and leave less ground for complaint. Mr. Harrison says he is not prepared to accept Mr. Wright's model. I am not surprised to learn that, but wait a reply to that along with the other items from the inner circle. This particular Committee have evidently missed a grand opportunity for getting their names engrafted on the minds of breeders of the Scotch Fancy Canary with satisfaction and deserved approval. But what is the result? We are quite as far forward as ever. Still, there is time to recall that state of matters by the Committee adding to their numbers, and acting in conjunction with kindred associations wherever the Scotch Fancy is bred. Any expense could be met by subscription, but once again let me remind those interested that the question of deciding what type is, or is not, to be the standard must and can only be done on broad lines, to bring us as near as possible to a proper understanding as to the true type of a Scotch Fancy, which is impossible on present conditions.

PIEBALD.

HOW WE CAUGHT THE WILD "SPARRER NOKE."

A True Tale.

SIR,—"Hello, Jack, lad, turn thee out there," and as I, the trimmer of the S.T. Guillemot of the Seagull Fleet, rolled out of my bunk in answer to the shout of Bill, our bo'sun, whose first words on my head getting to the top of the companion ladder were: "Come on Jack, there's a great brown bod forrod, with shining yellow eyes as big as saucers. None of crew durst go on deck but me. I'd have bashed it with a handspike, but skipper wants it to be stuffed to match his other cases." I may here explain I held the post of naturalist on board the Guillemot, as well as that of trimmer, through getting half a dozen Kitties and a very fine Gannett to the stuffers in clean condition, a very hard task on board a trawler. It was just breaking day as I climbed on deck, rather a foggy morning off the Shetlands. I shivered in the raw air as I went forrod to see the cause of the barney, and a fearsome sight it looked in the grey foggy light, a large dark bird bolt upright with glinting yellow eyes, which were the only things that moved about it. As we passed by the bridge, our skipper shouted down to us, "Go back, you young daft heads, it's a blooming Sparrer Noke, and if it gets at you it will out you." The bos'un and me held a short council of war, and after I had persuaded him to lay down his handspike, I got him to mount the rail with a 2 cwt. basket we had commandeered from the coalie's last trip, while I, armed with half a bread loaf in one hand, and about two pounds of raw beef in the other, made a frontal attack, in spite of the warning from the skipper. "Them Sparrer Nokes is the nofullest bods out, and you will have no chance with it." I went nearer and nearer to it, waving the bread and meat in front of the astonished bird, while our fighting bo'sun crept round the rail to the bows, when down came the basket, and the norful Noke was our prisoner. After a little war dance round the basket me and the bos'un got a bit of old netting, and worked it under the basket, lashing it well round the sides. We then turned the Noke up for the inspection of the crew, who only half liked coming close to it. The skipper said, "It's the biggest Sparrer Noke I have ever seen." While our Geordie, engineer, said, "Na, na, laddie, that's na Sparrer Noke," the decky, a Lowestoft man, said it was a Kesteril, so the skipper turned to me and said, "Jack, what soat of a bod is it?" and as I have always found it best to march with the band said at once, "A Sparrer Noke, of course." This, no doubt, was the reason why during the day I was invited into the skipper's cabin for a glass of grog and a handful of cigars. I was appointed chief attendant to the "Sparrer Noke," which received the name of "Jack," in honour of your humble. I was allowed what beef I wanted for Jack, but he seemed to prefer the inside of fish, as we were gutting the catch. He soon seemed to improve in condition, but do as we would we could never get him to respond to any of our advances, but would retire to the back of the basket with half open beak and wings and eyes that seemed to nearly strike fire. After about ten days we made the Humber, and the skipper sent me and the bos'un with the "Noke" to the stuffers, but he had gone in the country and his shop was locked up while the morrow, so we hailed the driver of a waggonette and chartered him to drive us to the skipper's, as we wanted to be shut of "Jack," and go a bit on our own. Before we started, the driver wanted to have a look at "Jack," who was crouched at the far end of the basket, so I borrowed his whip to stir the "Noke" up. I said, "Come up, Jack," giving him a poke with the whip at the same time. Whether it was the smell of the land breeze, or thoughts of the many pokes he had had on board the Guillemot, I can't say, but Jack came up with a vengeance; the basket and net flew from the fierce striking claws as if they had been straw. "Hi' up, Jack, he means us," shouted the bo'sun, as out we both jumped, while the driver, with scared face, threw his horse rug over basket and struggling bird, calling out to us, "It's the hoss he's after, and if he blinds him you'll have to pay." So we boarded the waggonette again, and made the rug fast round the basket. The driver said a lot about chaps bringing such blooming things like them that they were afraid of. After a lot of gas, the bos'un said if he was frightened of the "Noke," he was not frightened of him, so he had better get down, and they would soon settle things, but as the bo'sun weighed about fourteen stone and had fists like shoulders of mutton, the driver did not take the hint. One of the bystanders who had gathered round said, "Take it to the park, they will have it." Off we set to get rid of Jack, and get the driver his rug. On arrival at the park lodge, and stating our business to the gardener, who we had called from his dinner, "Sparrer Noke," he said, as he lazily stretched himself in the doorway, "Hmmph, we have four already." This made us look at him with both respect and awe, and rose the sixpence, with which we were going to bribe him, to a shilling. This altered the case altogether, and he briskly said, "Bring him along, and let's look at him." After he had turned Jack into a large wire cage he seemed a bit flabbergasted, walking round and round him, then called to a passing gardener to run and fetch the superintendent. To us he said, "Don't go," as he saw we were sliding off to the wagonette, thinking the "Noke" was again going to be hung round our necks like the Albatross of the ancient mariner. On the superintendent looking at "the Noke," he asked the owner's and skipper's names, also what they called the trawler, where we were when we caught it, and, as we were going he said, "Tell the skipper I will thank him for it through the evening papers." After tea me and Bill turned up at the skipper's, who said, "You are lucky that it did not put you through it, as them Sparrer Nokes are blooming terrors." We told him our message, and after sending for the paper, we came across the following notice:—"The Park Aviaries. The captain of the S.T. Guillemot has just presented to the Parks Committee a magnificent Golden Eagle. The bird, which is a large young female, in splendid condition, will no doubt prove a great attraction to the numerous visitors, who will join the Committee in thanking the Captain for his valuable gift." "Goldin Negle," said the skipper, "well, I'm blowed." "I'll bet I bash the next that comes aboard, 'Sparrer Noke' or 'Golden Negle,'" growled Bo'sun Bill. The skipper turned to me, but I, guessing what was coming, struck in with, "You can never tell them sort of bods; see, we all called it Jack when it was nowt but a Jinney."

WAYSIDER.

The National British Bird and Mule Club Annual Ramble.

Photograph by Mr. V. Wynn, of the party grouped under the "Gilman Oak," the largest oak tree in Epping Forest.

A DAY WITH NATURE.

The National British Bird and Mule Club have an enjoyable Annual Outing.

The annual country ramble of the N.B.B. and M.C. took place on May 25th last, and was in every sense a splendid success. The venue was, as last year, Epping Forest, and the leafy glades and well-shrubbed commons of London's largest "playing ground" provided those who participated in the outing with an altogether delightful time. The "clerk of the weather" smiled on the venture to some purpose, sending us a tremendously hot day, which, coming sandwiched between the cheerless, cold weather so prevalent of late, rendering it dangerous to "cast a clout," made some of the party "sit up" in the process of tramping about clad with heavy clothing. Still, we endured it cheerfully. Only a particularly hard-to-please individual could possibly have taken exception to the glorious burst of sunshine which greeted the advance party on reaching Loughton (the starting point of the expedition) in the early morning. It numbered a "baker's dozen," and was joined by Mr. J. S. Clarke and Master Clarke, who filled with distinction the role of "guides and advisers in general" throughout the day's proceedings. Mr. Clarke is to be envied for his intimate knowledge of the Forest, every road, footpath and land-mark being seemingly known to him; while a keener eye for a bird's nest we never met before. Master Clarke (ætat some thirteen summers) "follows in his father's footsteps," and bids fair to outrival his paternal mentor in the near future so far as an intimate acquaintance with Epping and the bird-life it contains are concerned. It is fitting we should record our thanks to them. The second party joined the "all-day-outers" in the afternoon, when it was found that no fewer than fifty-three bird-lovers had forgathered to participate in the ramble. Many well-known gentlemen figured amongst them, including Messrs. J. Tyson and two sons, Lott, Wynn, G. Crabb, Dewhurst, Trower, Carr, Plumbridge, Silver, Maxwell, Shepherd, Harper, Robson, Cooper, Brown and Curtis; while the members of several kindred societies accepted the invitation thrown out by the N.B.B. and M.C. to join in the stroll.

The morning party cut right across the Forest, eventually pulling up at ye olde hostelry, happily named "The Owl," for lunch—a good and heartily enjoyed spread. In the afternoon the party turned southwards towards Chingford, bearing round to the right, and exploring the ground in the vicinity of Connaught Water, afterwards again making its way to the "Owl," where a splendid "high tea" met a well-deserved fate. Of all the incidents crowded into this enjoyable day we have not space to speak. Suffice it to say that, although the Forest is not an ideal place to see the birds themselves, the cover being too plentiful and thick, it is at least an ideal place for a nesting expedition, a wonderful variety of "aerial cradles" being hung within its confines. Among the nests to come under notice were those of the Whitethroat, Bullfinch, Robin, Chaffinch, Willow Warbler, Linnet, Green Woodpecker, and a probable Red-backed Shrike, to say nothing, of course, of scores of homes of what might be termed the "common fry." The birds observed included the Nightingale, Jay, Magpie, Garden Warbler, Chiff-chaff, Long-tailed Tit, Heron, Redpoll and Whinchat—a list, of course, which excludes dozens of well-known species.

In the evening, after the edibles had been disposed of, an impromptu concert was organised, and wound up the proceedings in acceptable manner. Mr. Geo. Crabb was elected chairman, and one or two fanciers distinguished themselves in the role of artistes, while the landlady's daughter yielded to the blandishments of Mr. Clarke and obliged with a sweet song. Several toasts and a little speechifying followed, after which the party wended its way to Loughton Station, amid the threatening of a storm, which, however, did not prevent the Nightingales—and one grand vocalist in particular—from providing us with an outburst of Nature's most delicious music—a fitting finale to so pleasant a day.—G. E. W.

5s. M'thly. £3 10s. GIGANTIC FACTORY SALE. Offered. 5000 new "Clincher Tyred" F.W. Cycles for £3 15s. by instalments; or, cash with order, £3 10s. Worth double. Free on rails Norwich; approval. Send no money. Send Post Card for full particulars.—Dereham Road Cycle Co., Norwich.

The Yorkshire Canary.

A Few Incidental Remarks.

A paper delivered by Mr. A. Paddock before the Birmingham C.B.S.

When I consider that there are others among your members much more qualified to treat upon the variety, you will readily understand that it is with some considerable anxiety, not to say reluctance, that I approach the subject. To those more experienced fanciers present, who could probably give me much valuable advice, I would here say that there may be containcd in this article an idea or two which goes some way to confirm a theory of their own, but about which they do not yet feel quite certain. And to the younger fanciers I trust there will be much useful advice. My hope is, therefore, that when I arrive at the end of my paper you will not have come to the conclusion that your evening has been wasted.

I have only been a fancier and breeder of the Yorkshire Canary for some five or six years, but during that time I have endeavoured, by every means in my power, to accumulate all the knowledge and object lessons possible, and yet I often think how little I really know about the subject.

A MISTAKEN IDEA.

I have frequently heard it said that what so and so does not know about the Yorkshire is not worth knowing. Now, I think that this is altogether a mistaken idea, when applied to the hobby of breeding exhibition Canaries. It might be applicable to a trade or profession, but in the subject under notice, where types are frequently altering, judges' ideas changing, and competition becoming keener and keener every day, I say it is a radical impossibility for any one individual to be right up to date with the times, and to know everything that is worth knowing about this or any other variety.

In proof of my contention, I would draw your notice to the enormous numbers of Yorkshire and Norwich birds that are bred in Bradford and Norwich alone every year, and yet out of these vast numbers, how many real champions do we hear about in any one season? I venture to assert that the champion exhibits, and by this I mean ideal specimens, bred in any one season from all the varieties of the Canary in the whole of the British Isles could be counted upon the fingers of one hand.

From this statement it will at once be assumed that fanciers need not be at all discouraged if they fail to breed several easy winners annually, and my advice to those present is to keep pegging away in the hopes that the future holds out brighter prospects, and when the time comes that you are fortunate enough to breed a specimen in which you and the judges are unable to find a fault, you will say that your time and labour have not been in vain. This difficulty of breeding an ideal specimen is, I consider, the very life of the Fancy. Were champions to be turned out like clockwork by every breeder, the result, I think, would be an immediate decline in the Fancy, or constant changes in the standard as being the lesser of two evils.

I hope these remarks will not tend to lessen the ardour of the younger members, or those who have not the spending power they would like to possess. To have a sufficiency of ready money wherewith to replenish one's bird room every year or as occasion demands, is to be in a most fortunate position, but we should remember that £ s. d. does not necessarily command success. What is much more to be desired is the power of discernment and the judgment begat of experience, whereby the fancier is able to distinguish the good from the poor, the better from the good, and so on.

Therefore to the beginner particularly would I say, acquire all the information you possibly can, study your birds closely, and find out wherein they are deficient. If you are invited to inspect a fancier's bird room avail yourself of the opportunity.

TAKING A CHANCE.

Should you have the chance of a chat with any of our well-known judges, and particularly any of our well-known breeders, take it, if at all possible. By such means as these will your views be developed and broadened, and you will learn more in two or three years than you would in a lifetime brooding over your hard luck and the incapacity of judges in general. By visiting the shows and availing yourselves of the opportunities mentioned above, you will the more readily in your mind's eye fix a pretty good idea of what the Yorkshire should be. Bear in mind that the Yorkshire is "the" bird. Never mind what other fanciers may have to say about any other variety. There are more Yorkshires bred in England than any other variety, and from all parts of the country are reports to say what gigantic strides the variety is making. In the Midlands they are easily the most popular of all, and are the backbone of our local shows. It will, therefore, at once be seen how very necessary it is to leave no stone unturned in order to achieve success on the show bench. Here I think a word or two of warning against what I may term the faddist will not be out of place. We are constantly coming across the breeder who has very fixed ideas on certain things, and half a dozen fanciers of one's acquaintance, you will find, treat certain matters in as many different ways. Do not be led astray by any individual on any single point, but digest their ideas and by using commonsense, and giving the most reasonable the first chance, you will ultimately find that which brings you success. An ounce of practice is worth tons of theory, and I think it is the height of folly to attempt anything in the way of dogma where live stock breeding is concerned.

And this is all the more apparent when we see the diversity of opinion which evidently exists among many of our judges of to-day.

TYPICAL BIRDS.

In conversation with a well-known Northern fancier some little time ago, the subject cropped up, and he volunteered the information, in a very positive manner, that Mr. So-and-So went for a typical bird of medium size. Mr. So-and-So, on the other hand, would always pick out a small one if it was very typical, and a bit extra in colour, while Mr. So-and-So went for size. Personally, I think size has been a little overdone during the last few years, not only in Yorkshires, but in almost every other variety, to the detriment of type. Of course, it is an axiom that a good big one is better than a good little one; but how often do we see the first prize winner at the head of the class almost solely on account of his size. I contend that a medium-sized bird should always beat a big one if he excels it in type, and is equal, or nearly so, in other properties.

The birds which excel in size may be and very often are more valuable to the breeder than those of medium size; but I think their proper place is the breeding room, or, if on exhibition, in classes reserved for pairs or stock birds.

It is very necessary to have size in one or other of your stock birds, but be very careful to see that you do not sacrifice type and quality, and I always prefer to have size on the part of the cock bird. The big typical seven-inch hens we sometimes read about are birds I have never seen. If I was fortunate enough to possess one I should take care she was paired to a cock well on the small side. The pairing of two extra big birds together is a mistake, for with the extra size you are breeding into the progeny you are also increasing the length of feather, which, no matter how fine the quality may be, is a thing to be avoided. We are all agreed, I suppose, on the hereditary tendency, of live stock to reproduce their like, and therefore it will appeal to you at once, as being very necessary, to have typical specimens to begin with in order to breed birds true to type.

Nor should a beginner think that all the product of two typical specimens will be as their parents, or he will be grievously disappointed. The next matter for consideration is the generally accepted theory that the progeny will favour for type the hen, so that it will be at once seen that you must have type in the hens from which you expect to breed your exhibition birds. I would draw your most earnest attention to this point, for neglect of it will cause you to remain in the background. It is absolutely useless to attempt to breed exhibition birds from hens that do not bear some semblance to type.

FAVOURS GOOD HENS.

Far rather would I breed with an ordinary good cock and good typical hen than vice versa, as the possibilities of breeding a show bird from the latter are infinitesimal.

Unfortunately, as you all no doubt know, good typical hens are exceedingly difficult to find, and still more difficult to breed. Especially difficult is it to find hens of good type and quality possessing plenty of breediness or style in them. This particular characteristic is the charm of the Yorkshire variety, and is solely derived from crossing with the Belgian, whereby we get that nerviness or swagger which is so much admired. It is of paramount importance to keep this dash of Belgian blood well established in your breeding room, otherwise you will find a rapid deterioration in your stock. They will become sluggish in their movements, and devoid of nerve, and, ultimately, position. If you are mating up otherwise good hens, but lacking the afore-mentioned breediness, be most particular that the cocks have a superabundance of it, and a sufficiency of this quality should be found in the young.

IMPORTANCE OF BREEDINESS.

This matter of breediness has a great deal to do with the stand or position of your stock. It is all very well to talk of training for position, but all the training in the world will not develop what is not there, and birds that have no breed in them in nine cases out of ten have no position.

By carefully watching these particulars you will develop a strain of birds which will be a credit to yourself, and one with some claim to pedigree. Let me here say that the pedigree of a stud should be as useful to the breeder of Yorkshire Canaries as to the breeder of dogs. Pedigree does not count for much in Canaries when you are selling a bird on its merits, but it is most useful to the breeder, and is a source of information to him the value of which it would be difficult to over-estimate. I do not mean to say that, being a buyer, I should be unduly influenced by pedigree, but were I certain that a good winning line lay behind the purchase in question, it is likely I should be well satisfied. This subject of pedigree opens up a tremendously large field for the scope of breeders, and I think it quite impossible to establish a strain of birds with some particular good qualities except by the aid of line breeding.

A BACK-END TEMPTATION.

At the end of the year one is very often tempted to dispose of all the undersized birds which have been bred that season. Now I am convinced this is a big mistake. You will very often find that the most typical birds you have bred are a bit deficient in size, and that in many cases the bigger birds from the same nest are a little short in type. These small typical birds are, I consider, a most valuable asset to the breeder. Especially is this the case when he knows by their pedigree that they are bred from birds which bred an average number of good-sized birds. I would very much rather breed from a bird of this sort than introduce fresh blood in order to get size when I knew nothing about the ancestors of the bird. Therefore, where you know that size is in the blood, do not clear out all those smaller birds. The hereditary tendency to produce size is still there, and you will generally find that these birds, properly mated, will produce good-sized typical specimens in the same proportion as their brothers and sisters, who can, in some cases, give them almost an inch in length. I do not wish to be understood as saying that all the small birds should be kept, but a careful selection of the very best should be made and retained in the bird room.

The hens, when of good quality, and also of good type, are very useful birds for stock purposes, paired up to cocks which are on the large side. They tend to keep the progeny within bounds as regards size, and go a long way to fix the trait of quality in one's strain. This is a most important factor, and should never be lost sight of by the breeder, who is endeavouring to build up a useful strain of his own.

If these points are not closely cultivated it will necessitate the fancier dipping into his pocket almost constantly, that is, if his aim is to remain at or near the top of the tree, to replenish and improve his stock.

GOING OUTSIDE FOR STOCK.

This going outside for stock birds cannot always be avoided; in fact, it must be done periodically; but, by close attention to selecting the proper birds to pair up and by paying attention to pedigree, the necessity of going outside for suitable birds will occur less frequently as time goes on. I would here like to mention a fact that has been forced upon me during the last few years. It is that many breeders of some standing are under the impression that big birds, irrespective of type, are good stock birds. I have often had my attention called to birds whose only strong point has been their size, and upon expressing the opinion that they were deficient in several points was told that they would be good stock birds. With this opinion I totally disagree. Big birds are most useful when typical, and without any serious fault, but to pair up such birds simply on account of their size is wasting time. You will do much better to pick moderate-sized mates for pairing with the smaller birds if you also pay due regard to the fact of how they were bred as regards size.

A SERIOUS FAULT.

Respecting what I consider to be the worse faults in a Yorkshire, I think the two most serious are flat heads and thin necks. It will generally be found that where two birds are paired up, one of which has either of these faults, almost every one of the young will fail in the same direction. Especially is this the case where flat-headed birds have been used. It is a blemish very difficult to get rid of by breeding out, and I should advise breeders to get rid of this sort of bird for what it will fetch. A Yorkshire with a nice round head has a very good start in the race for honours, while a flat-headed specimen is at once so handicapped as to have little or no chance of acquiring distinction. I often think that some judges allow this fault to count much two heavily against otherwise typical birds, as I have often seen a most typical specimen at the bottom of the cards simply on this account, while others that could certainly beat it in head properties, but which were deficient in other points, were placed above it. This treatment seems to me to be somewhat unjust. The Yorkshire club allocate 5 per cent. for head properties, while 20 per cent is given for quality of feather, and 20 per cent. for position. It therefore appears to me that some judges unduly handicap birds with flat heads, to the detriment of any other redeeming features they may possess. Possibly it is on account of them knowing how difficult it is to breed this fault out, that they handicap these birds so heavily. As regards thin necks, I do not think this is such a difficult matter to remedy, and by pairing these birds to mates which are somewhat short and also very thick in the neck you will soon get rid of this objectionable feature.

Discard all hens that are pronouncedly bad in this respect, as it will take such a lengthy time to breed the fault right out as to make the attempt not worth your while. The same might also be said of birds possessing very heavy frills. If the fault is not very aggravated a careful selection of partners, with nice even-lying feathers, showing no trace of a break in the gullet, will generally remedy the fault.

The hollow back is a fault which shows itself more at some times than others, and is not of vast importance, being easily bred out by choosing as partners birds which are well rounded in body and having very straight backs. One should not part with a good bird having this as its only fault without some consideration.

CONCERNING WINGS AND TAILS.

In the case of bad wing carriage, drooping, or crossing, birds with opposite tendencies should be paired together, and under no circumstances should two birds with the same fault be paired up. Shortness of thigh is almost always an invariable sign of want of breed, but plenty of thigh does not always mean a sufficiency of this most important characteristic. In selecting a mate for one a bit short in thigh, choose one showing plenty of it, and as breedy a bird as possible. Be particular never on any account to pair together birds having the same faults, as it will only accentuate and fix the disfigurement to such an extent as to render them useless in the bird room. I do not intend, in the space of this short paper, to say anything about cages and the methods of feeding, or anything pertaining to these matters. I should just, however, like to mention that I use whenever possible watercress for hens when feeding young birds. Thoroughly washed, and with all the loose moisture well shaken off, this is the best of all green foods. When the young birds are taken away from their parents the most valuable food I know of is scalded bread and milk, with the addition of a little sugar. Squeeze out the superfluous moisture, and give in small quantities to the young birds about three times a day in addition to the ordinary egg food. I am certain that if this method of feeding was more generally adopted there would be less complaint about the loss of young birds after leaving the parents. As a means of training the young birds into position, I run them into show cages, and in between each cage insert a piece of cardboard sufficiently high to cause the birds to stand very erect if they want to see over it. Their natural inquisitiveness to know what is going on around will make them pull themselves up, and this will help to bring that soldierlike attitude into their figures which we all desire to see in a well-trained Yorkshire. The time one spends in handling and training the young birds is amply repaid by their appearance on the show bench, for we can all appreciate the pleasure it is to pick up a well-trained bird, and we generally find that he is somewhere near the top. Great care should be taken not to overdo this training for position. It is very easy to spoil an otherwise good bird by over-training. The result is a strained position which the bird takes up, and the more breed it has in it the easier is the mistake made. Birds with good position as nestlings want very little training. Run them into the show-cage, and by gentle handling secure their confidence. This will prove ample to induce them to show themselves off to their utmost.

COLOUR FEEDING.

When your first nest of young birds is about ten weeks old, the second nine, and if you have a third eight, it is time to commence colour feeding. By anticipating the moult thus you get the blood fully charged before they begin to cast their feathers, and a nice level colour is the result. Begin with a very small quantity of the colour food, gradually increasing until the birds are nearly finished with the exception of the head, when the quantity of the pepper should be gradually diminished. Give them a bath three or four times a week on bright, sunny mornings, and you will find this to be an excellent conditioner. When you have picked out what you think will be your show birds, cage them off singly or in pairs after they are about three parts through the moult. This will reduce the chances of any accident through fighting, and will also assist you to keep them steady.

When preparing birds for exhibition I like to wash them four days before the show takes place. This gives them good time to get their feathers thoroughly dressed, and if you find that a little soap has been left in the neck or elsewhere you have the opportunity of re-washing the bird and still being in time for the show. I need hardly say that a good bird and a good wash is more than half the battle, so I would recommend the younger members to become as adept at tubbing a bird as possible, and as a means of practice to operate on their less valuable specimens frequently. Be careful to get all the soap out by thoroughly rinsing, at the same time being as expeditious as possible, while making a good job of it. Wash and rinse the way the feather lies, and dry slowly with the tail towards the fire. I think it wise to keep the birds in the same room until the following day, when they can be removed to the bird room.

EIFFEL TOWER MILK PUDDING.

In an emergency it is well to remember that a 1d. packet of Eiffel Tower Milk Pudding makes a delicious milk pudding in 10 minutes. Try a 1d. packet to-day. Save labels for 10/6 picture free.

Types of Norwich Plainhead Canaries.
Illustrating Mr. Spillman's paper.

THE TYPE OF THE NORWICH PLAINHEAD.

An Illustrated Lecture given before the Members of the W.C.O.S., Plymouth, on May 27th, by W. Spillman.

Mr. Chairman and fellow fanciers: On previous occasions when I have addressed you I have not sought the assistance of any notes or other people's writings, preferring to base my discourse on what past experience had taught me. To-night I purpose making an exception, fearing, however, that by repeating the works or doings of others I may make a mistake. My ambition has always been to try to make these meetings agreeable, and the fountain-head for a course of instruction. On placing this illustrative competition at your disposal, I thought I would confine it to those members who had never won a first prize in open competition, and I am very glad to say it has met with general approval. I sketched these half a dozen birds (five of which I copied from what had already appeared in the Fancy Press, whilst the other is the nearest that I have yet put on paper to suit my own ideas). I cannot say it is perfection, even in my own estimation, for it lacks the finishing touch that shows quality and gives expression (which things I am content to leave in the hands of such an artist as Mr. Norman).

Directly I had finished them I sent them off to my friend, Mr. Martin (the worthy chairman of the Metropolitan Society, who had sent me a drawing previously), and I must tell you the only difference between ours was that the eye was not exactly in the same place, while his bird was a trifle heavy behind legs, and the tail was not wrapped up so tight as I like them. I asked him to place them in order as he thought fit, and to see how his awards compared with mine (then unknown to him). This is what he says—No. 1 2nd, 2 6th, 3 5th, 4 4th, 5 1st, 6 3rd. The first scores easy; and we agree. I pass over his second on the grounds of being too small, too long, and out of proportion—not chubby enough. Third, we agree. Fourth, we agree again. His fifth is too small in beak, a little stilty, unnatural tail, and too erect. His sixth I place second, for the bird possesses more all-round Norwich properties than those placed above it; has better head, is more proportionate, and is stouter—a far more useful bird. That is my candid opinion.

Well, now, we have had enough lectures appearing lately in CAGE BIRDS to meet the requirements of the most fastidious, and not the least amongst them is the one by our respected judge, Mr. George Gardner. How beautifully original, concise and practical, are his writings! How he drives home the point with dexterity! Really, if it is true that a lovely woman can bring the world to her feet by her beauty, then surely I must admit his word-pictures create a certain weakness in the knee for me. But even he and I don't agree on one point, and this, a pair matched for breeding. If I remember rightly, he strongly recommends the pairing of two show birds, whilst I shall always contend that the show bird is far surpassed by his big brother in producing exhibition specimens, and I am backed up in my contentions by no less than such an up-to-date authority, as our esteemed breeder, exhibitor and judge, Mr. W. Vardy.

In the show season of 1896-7, there was just as much difference of opinion as there is now. So I thought I would write and propose that we have a Norwich Plainhead Club, which should fix on a certain type. The following week I was supported by Mr. Payne and others, and, in a very short time we had Mr. A. G. Davis, of Manchester, acting as hon. secretary, and a club formed with about fifty members. The Committee held a meeting and decided to have a model, which in due course appeared in "Fur and Feather." And I believe about the same time Mr. Payne wrote his book containing his ideal. Certainly these were two distinct classes of bird.

Some time went on, and neither of these birds, although, mind you, differing so considerably in type, were challenged by anyone. So I fired up and again wrote as follows:—It is really astonishing to think that the Norwich Plainhead Club model, which I believe Mr. House claims the credit for, and Mr. Payne's ideal should go by without some comment on their merits or otherwise. Oh, the difference! Now if we take the N.P.C. model, which was accepted by a good number of representative fanciers, it is straight from head to tail, rather too erect, a bit hollow on the throat, and with a minature tail, for such an enormous body. Was ever such a bird bred? And is it likely one ever will be?

My word, I got it the following week! Mr. House said I was wrong in my statement, that he did not claim the credit for the model. But he had sent a rough proof and pointed out that it needed certain alterations ere it would fulfil his idea of a Norwich Plainhead. It was, however, placed before the committee and accepted as it was. So Mr. House had no alternative but to tell the artist to proceed with the original sketch, even although he thought it could be improved upon. Then Mr. House proceeded to express his opinion on Mr. Payne's ideal. It was too long in body, too squatty in carriage, and too long in leg; it was also too sulky looking for a Norwich Plainhead. He finished his letter by saying he should not have criticised Mr. Payne's ideal had I not mentioned his name, saying, "J.H.P. will, I know, receive my criticism in the same friendly spirit as it is given. Jack likes a big 'un; I don't."

Following this letter (in the same issue) were two other letters in agreement with me, and one of them by the late R. L. Wallace. Now, with Mr. House, I quite concur as regards Mr. Payne's ideal of years ago, of conrse, hence my putting him sixth in my awards. Number two I placed fifth (supposing it to be the same size as the others). I certainly preferred it to the aforenamed. My friend was not far out in his description as the bird appears so small on paper. But Mr. Vardy, I am sure, would say (as I do) that it is not so easy for him to put on paper what he can breed and put in a show cage. Number three I copied from the "Blaze of Colour Plate," and I placed it second, for, as a Yellow, I thought it the most proportionate and deserving its place. Number four, the N.P.C. model (full size) I put fourth, and I have already stated my reasons. Number five, my own, I will leave for my critics to pull to pieces; whilst the sixth I placed third, and was very near putting him second, but for his being too full at chest, unshapely at neck, poor in leg, and too erect. I thought there was no alternative than to give it its present position, consoling myself that he ran the second a close race.

Now, my friends, I have given you my reasons, and the first out of the hat that comes the nearest to my selections wins the special I am offering. I am very grateful for the compliment the committee paid me when they decided my placings should be accepted, and I thank you all for the very kind attention and assistance you have given me.

The Skylark:

Its Selection and Preparation for Singing Contests.

By A. C. ALLAWAY.

HAND-REARED BIRDS RECOMMENDED.

According to promise made you, I now send an account of my methods in dealing with the Skylark for the purpose of singing contests. In the first place, I may just say it is no use anyone going into it half-heartedly, but if he possesses patience and perseverence and does not mind a bit of trouble, I have no doubt he will eventually succeed, providing he gets the right stamp of bird. I must say, however, that all the feeding and training he can give will represent only time and money wasted unless the bird he has is a suitable one. But a suitable bird, like most other good things, is bad to get.

The best way to set about obtaining it is to hand-rear about a dozen young ones, taking the nests as soon as the young are a little feathered and strong enough to hold up their heads to be fed. They will certainly hang a bit longer on yonr hands before they can pick for themselves. You are more likely, though, to get more snitable birds than if they are left too long with the old ones, for most of them never seem then to get rid of that nervousness which is a characteristic of the Skylark, and so do very little good as singing contest performers.

HOW TO HAND-REAR YOUNG SKYLARKS.

For the benefit of beginners, I will give the best recipe for food for hand-rearing young Larks that I have ever tried. Take half a teacupful of boxings—or pollard, as I believe it is called in some parts. But be sure it is clean. Add to this half a hard-boiled egg, which has been pressed through an ordinary perforated zinc grater (white and yolk together), and one teaspoonful of grated bullock's liver. Scald altogether with boiled milk, minding not to make it too sloppy. The above is enough to make at once for about half-a-dozen birds.

Feed on this, giving no water to drink till they can pick for themselves, then stop the milk and scald the food with boiling water. But also add to each mixing the same quantity of dripping as is mentioned further on for use with the old Larks. You can now give them water, with just a little Parrish's chemical food in it. See they do not drink too much at first. Do not change this food for any other till they are right throngh their first moult, except to give them a very small mealworm now and again, and a little chickweed about twice a week, cut up very small with the scissors, and dropped on to the cage bottom.

SELECTING THE RIGHT BIRD.

As soon as the birds can safely fend for themselves, cage them off in separate cages and hang them up about breast high in a nice light place. Then watch for the birds that sing most, and will allow you to handle their cage without getting frightened; they are the ones you want. The birds that are restless, and jump about, may turn out very good Larks in the ordinary sense, but they are, as a rule, too nervous to ever make quick starters on song when hnng up at a strange place.

Having got three or four birds such as I have described (you cannot expect more out of a dozen, for, as I said, they are bad to get), do not be afraid to shift them about out of yonr own house into a public-house bar, or into a neighbour's house—in fact, anywhere, so that it makes a change. But do not take them where they can hear Canaries singing, as they seem to pick up the Canary song before anything else.

GETTING THE RIGHT SONG.

It is a lot of extra trouble taking several birds into the country to hear the wild Larks sing. This is a thing I never had time to do. I always had one or two of the best Larks I could get singing in the house while hand-rearing, and my young birds always came out well enough. But remember that whatever bird you have "taking the lead" in the house at this time, the young ones are sure to have most of that bird's song, even though you do take them into the country.

TRAINING TO SING.

Of course you cannot hang them all in the window at the same time, but you will have to encourage them to sing as much in the window as possible, by giving each bird its turn, and by so doing you will soon see which are the most likely to suit. When commencing to feed and train for the contest season, keep the birds in some part of the house where there is just sufficient light for them to see to feed by. Have a partition between each cage, so that the birds cannot see each other. And if the place is not quite dark enough to stop them from singing, you will have to make it so with a cover, for if allowed to tear away on song as they like you cannot expect the birds to be full of singing when you hang them in the window at a contest, or when shifting them from place to place in training.

At the same time, if yon find a bird becomes restless under cover, and wanting to sing, hang him up in the window and allow him to sing himself out a bit. But take him down as soon as he has eased himself, as it is a bad plan to allow Larks to hang in the window after finishing song. It is also a bad plan to allow them to sing under cover. These may seem very small matters to some, but I can assure you such small matters are sometimes of very great importance when it comes to competition. I have known many a good bird wasted by reason of the bad management bestowed upon him.

HOW INDIVIDUALS VARY.

With regard to the best food to get a Lark up fit for a contest, I am afraid this is rather difficult to explain, especially on paper. Besides, there is such a difference in birds individually. I have had a bird or two in my time that seemed to be always fit with no extra feeding; even when in moult they could not help singing a bit. Of course, such birds are very little trouble so far as feeding goes.

At the same time, I have had other birds that gave me no end of bother. Although splendid songsters and just about unbeatable in their own house, they were no use at all in a strange place, unless got right up to the highest state of condition, and caught in that condition. I have had birds of this stamp sing the quarter-of-an-hour right through without a break. And that is the reason you need at least half-a-dozen birds if you intend to go thoroughly into Lark singing, as any of them are liable to go off a bit at any time, so that you must have a few to choose amongst.

THE FOOD FOR CONTEST SINGERS.

I will now give particulars of the food I nsed with more success than all the rest of the fanciers in this district put together; but bear in mind the possession of the right stamp of bird had something to do with it. Cut into slices a small loaf of home-made bread, two days old, and dry them in the oven. Then crush them as fine as possible with the rolling pin. Keep this crumbled bread in a tin box, with lid on. Get half-a-pound of kidney beef suet, render it down, and keep the dripping in a cool place. When preparing the food take one tablespoonful of the bread, one-third of a hard-boiled egg (pressed through the perforated zinc), one teaspoonful of bullock's liver grated, one sweet almond grated, a bit of the dripping about the size of a horse bean, a bit of honey about the same size as the dripping, and two teaspoonsful of maw seed. Work it all well together—the egg will make it moist enough—and then press the whole through the perforated zinc grater, when it is ready for the birds.

The above is enough to make at once for two birds; if you have more birds, make accordingly. Do not give all of it at once, or they will waste it, but just what will serve till you have the chance to feed them again.

SOME FINAL HINTS.

This food, with about four small mealworms per bird every day, and just a little Spanish canary seed dropped on to the cage bottom amongst the sand, will bring your birds on splendid. About ten days before the contest is due, add two teaspoonsful of crushed hemp seed to each bird's daily fare. Give no green food of any kind till the day after the contest. Then, if your birds are very fit, stop the hemp seed and give a little chick-weed cut up small for a day or two, just to cool them down a bit. Of course, allow time to get them ready for the next contest, but it is dangerous trying to keep a Lark up to a high state of condition the whole season through, without any relaxation. If you do, the chances are that he will either turn stale on the high feeding, or, what is still worse, finish up by becoming subject to fits.

Type of Norwich Canary.—*Continued.*

WHAT IS A DESIRABLE BRITISH CAGE BIRD?

"Pity the Poor Judges!"

The N.B.B. & M.C. make some interesting additions to their list of "Desirable Cage Birds."

There was an excellent gathering at the National British Bird and Mule Club committee meeting, called for May 30th last, at headquarters, the "Old Napier," High Holborn, when an important agenda was got through. The item of special interest was the consideration of the recently-appointed sub-committee's recommendations with regard to the extension of the club's list of "British cage birds proper," eligible to compete for its cups, medals, etc. Their report, when read by the secretary, proved to be of a somewhat revolutionary nature, inasmuch as a goodly number of the small Waders was amongst the group put forward. Most of the birds were voted on individually; others in "family parties." In the end everyone was accepted, the complete list being as follows:—Crested Tit, Woodchat Shrike, Turtle, Ring, Stock and Rock Doves, Common Quail, Golden, Kentish and Ringed Plovers, Lapwing, Dotterel, Turnstone, Dunlin, Knot, Ruff, Reeve, Sanderling, Commou Sandpiper, Redshank and Greenshank.

After the sub-committee's list had been gone through, the claims of several other birds were put forward by various members of the committee, and these were put to the vote of the meeting and accepted. Thus the following species also take their place in the list by the side of those particularised above:—Nutcracker, Golden Oriole, Hoopoe, Swallow, House and Sand Martins.

There were many points of interest in the evening's discussion. Mr. Silver brought along a miniature library, which proved helpful in more than one instance, for there were few present to whom one or other of the birds under discussion did not present points requiring enlightenment. He read an engaging account from the worthy Bechstein extolling the Woodchat as a cage pet. The species is a rare occasional visitor to England, more especially to the southern and eastern counties, two instances of it breeding in the Isle of Wight being apparently based on trustworthy information. There would seem to be no records of the Woodchat having been observed in either Scotland or Ireland. It was unanimously accepted as a British cage bird.

The inclusion of the four species of Doves raised but little comment, the general opinion being that there were plenty of keepers of these gentle (according to the poet) creatures to warrant their inclusion in a show schedule, with a class to themselves. Mr. Fulljames, however, thought them too near the border-line of the pigeon fancier's preserves to be altogether pleasant; while their "cooing" was hardly on a par with the song of the Nightingale (what he thought of the "billing" he did not put on record). However, that Doves are largely kept, are suited to confinement, and are British birds, could not be questioned, and it seemed only fitting they should appear on the list of a club whose professed object is the furthering of the keeping of "British cage birds proper." So on they went.

The Crested Tit "came into its own" without even so much as an unkind word, and there is no doubt this beautiful bird will be an acquisition to the show bench, its exclusion hitherto being difficult to understand. A charming drawing of this attractive species appeared in CAGE BIRDS' 1907 Birthday Supplement. It is accepted as a resident of the forests which clothe the valley of the Spey and adjacent rivers (Scotland), though in small numbers only, and it has occurred at odd times in other parts of Scotland and England. In Ireland but two or three cases of its occurrence have been recorded.

The proposed inclusion of the Quail, the Plovers and the small Waders (vide list) also moved Mr. Fulljames to protest. Could they, be asked, be reasonably said to come within the definition, "British cage birds proper," as specified in the club's rules? Were they altogether suitable for keeping in a cage, and could show officials be expected to cater for such birds? These points were debated at length, but balance of opinion was heavily against Mr. Fulljames. It was pointed out that practically all the species were comparatively easily domesticated; that they could be, and had been, successfully kept in suitable cages; that the majority of them were graceful in form and bandsomely garbed, with interesting mannerisms, to say nothing of seasonal changes of plumage; that they thrived easily on the food generally supplied to the larger insectivorous birds, with garden worms, snails, grubs, tiny fish, etc., in addition—the fish, however, being not at all essential. Mr. Dewhurst, from personal experience, was able to give much valuable information.

The sub-committee's list being disposed of, Mr. Weston said that, as the Woodchat Shrike had been accepted, he should like to propose the Nutcracker be added to the list. Though, like the other species, only an occasional visitor to our island, it was a most attractive looking bird, quite suitable to cage life; while in all probability, seeing it was essentially a bird of the forest, and more or less Jay-like in its habits, it visited us oftener than was generally credited.

Mr. Maxwell said he should like to see the Swallow, House Martin and Sand Martin recognised. Personally, he experienced no difficulty in keeping them successfully—in fact, they were easier to keep and cater for than some other insectivorous birds on the list, and very much easier to get on to artificial food when newly taken. Mr. Fulljames strongly opposed the suggestion, contending that the three birds named were totally unsuited to existence in a cage, and that it savoured of cruelty. Mr. Maxwell he could quite understand being able to keep them, and other experienced fanciers too; but what of the beginners who would try their hands on them if placed on the club list, and of the number of birds they would be sure to lose? He was, personally, more in favour of cutting down the list, so far as the very delicate birds went, rather than of adding to it. This led to a keen, but entirely good-natured debate, in which Mr. Silver held forth eloquently on the ethics of cruelty, Mr. Weston also being moved to orate on the same subject, both combating the views taken by the previous speaker. Several others present also did not see eye-to-eye with Mr. Fulljames, Mr. Dewhurst confirming Mr. Maxwell as to the comparative ease with which Swallows could be induced to accept captive life, even to surviving several moults—unlike the Wrens and some of the Tits, which were notoriously difficult subjects.

Mr. Fulljames moved the inclusion of the Golden Oriole and the Hoopoe. Both, he said, were uncommon in our isles; but as to being able to successfully keep them in cages there could be no question of that. And, as such birds as the Woodchat and the Nutcracker had been accepted, it would not be logical to leave these two handsome species out.

On being put to the vote, all the species proposed were, as before indicated, formally placed on the N.B.B. and M.C. list. The meeting came to a conclusion at a late hour. Then someone suddenly recollected (amid laughter) that the case of the Meadow Bunting had never been considered! Someone was also heard to say, "Pity the poor judges! they'll have a hot time of it next year!" And one judge present avowed, with a tear in his eye, that he had accepted his last judging appointment!

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

** Friendship between Birds.

Last winter a Starling which had only one leg came daily to be fed; the other appeared to have been torn out entirely, not a vestige of it remaining. The poor bird was very awkward in balancing itself, and such a piteous sight that we held a council of war to decide whether it would be kindest to shoot it or feed it. What determined me to vote for its life was that I noticed the extreme kindness of the other Starlings, allowing it to have the choicest morsels and often waiting their turn until it had finished its meal. The Starling has returned this winter, and comes daily to be fed, and still I notice the same kindness shown it by the others, excepting by one cross-grained bully who pecks everyone indiscrimately. But on one occasion, when the bully pecked the invalid, another Starling flew to the rescue and pecked the bully into decent behaviour.—ERNEST WHITE (age 13 years), Leigh Terrace, Park Road, Cowes, Isle of Wight.

* Ruby-throated Humming-birds.

These birds are very common in South America, and especially in Florida. They fly about from flower to flower, sipping the sweet honey. These birds fly about like butterflies, and they look like streaks of brilliant light. They build a very neat and beautiful nest, which is a deep one. It is composed of cotton and down inside and mosses outside. The nest is generally situated in a group of flowers. When they are hovering over a flower they make a buzzing and humming sound, and this is the reason why they are called humming birds. There are many species of these birds, varying from the size of a Swift to that of a bee. They can be called a Bird of Paradise, because they are so beautiful. Their food generally consists of small insects and honey. The ruby-throated Humming Bird is about the prettiest species of its tribe. They have a long beak and a pair of fine elastic wings, and a forked tail.—ERNEST HALL (age 12 years), 5, Holly Terrace, Whetstone, London, N.

* A Rat who Catches Sparrows.

A curious encounter between a rat and a Sparrow is described by a London resident. He writes: "I was having my dinner in the workshop when I heard some Sparrows chirping rather louder than usual. On going out to see the cause of the unusual noise, I saw a rat with a Sparrow in its mouth trying to get into its hole. Once he succeeded in getting it there, but somehow or other the Sparrow managed to drag him out again. Another Sparrow, seeing its mate in danger, went to its rescue. He flew on his mate's back and began pecking the rat so hard that he was glad to release the Sparrow, which flew away happy at his narrow escape from death.—Sent by WINIFRED M. BENNETT (age 13), 60, St. Peter's Road, Leicester.

Sparrows.

Most gardeners will tell you how mischievous the Sparrows are in fields and gardens. They will soon clear a row of young peas if they are not well protected. But still they do a great deal of good in other ways, by clearing the gardens of caterpillars and other insects. They will often build their nests in the spoutings and block them up.—FRANK THORNTON (age 11), High Street, Oakham, Rutland.

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited."

Absence of Migrants—the Whitethroat.

The wanderings of our resident birds during the greater part of the year appear to be regulated principally by the food supply. The Chaffinches, for instance, will visit a certain district in great numbers where the beech mast are abundant, and the musical Linnets swarm in flocks to the land where the careless farmer has allowed the wild charlock seed to grow unchecked. Other instances of the doings of the Finches could be mentioned. When we come to consider the reasons for the non-arrival of certain species of Warblers, we are driven to conjecture and to theorise upon the absence of particular songsters. This can hardly be accounted for in the same manner, although it might be so without our knowing it, for some of the lesser Warblers feed upon insects so small that one would not be able to say positively if they were plentiful or not.

So far this summer our migrants have certainly not appeared in their usual numbers, hardly a bird of some species, generally plentiful, has been seen. The Swallows and Martins have, within the last few days, flocked into the village, and we therefore at present see a fair sprinkling of them. And if they are able to find food, how is it the Spotted Flycatchers have not arrived to interest us with their butterfly-like habits, for these birds feed upon the wing, differing only from the Swallow in the manner of taking the food. Last summer they were abundant everywhere, but up to the present time hardly a bird has been seen.

At the end of the Oaks-road there is a bridle path leading to Coulsdon. It is a most delightful place for the bird lover; the hedgerows are not too symmetrical, but have that wild, rambling way so delightful to see. The brambles, the wild clematis, and the thick-set thorn bushes grow in abundance, and during the summer the shady thicket is tenanted by sweet-voiced Warblers. The beautiful Whinchat and Stonechat watch from some prominent bush or raised clod in the field; the Tree Pipit descends from the summit of the spindly ash tree, with outstretched wings, singing as lustily as he can, as though the power of his melody was the stimulant that prevented him sinking to the ground, and at each few yards one may hear the delightful song of the Whitethroat.

An Excitable Creature.

See "Peggy" on some swaying branch, with swelling throat and quivering wings, singing as sweet a song as any of our summer birds; his crest is raised, his whole body quivering with excitement. He is an impulsive, fearless little fellow, as knowing as a Robin, and almost as trustful. Let him see you a few times without your startling him with any sudden movement or noise, and he seems to quickly understand that you mean him no wrong, for the next time you are passing his way his delightful little melody will not be interrupted by your appearance. Last year

The Lesser Whitethroat.

these dear little birds were plentiful, and many rambles were made exceeding pleasant by their fluttering ways. But few have been seen this year, and we miss them sadly.

Possibly the climatic conditions of the past month have prevented the Whitethroats reaching our district; or perhaps they came, and finding the cold spring had prevented the birth of their favourite food, passed on to some summer spot more sheltered from the cold winds and cheerless rain. And there, maybe, they will stay and nest, rearing a brood of sweet-voiced songsters, in a flimsy cradle almost too frail and delicate to hold the eggs, much more a healthy family of wee chicks.

Notes and Queries.

Facts about Rooks.

A certain professor has recently examined a number of Rooks, and kept a careful record of the food found in their crops. Taking the grain and potatoes on the one hand, and noxious insects on the other, the balance proved to be slightly in favour of the birds.

The Hawfinch and the Peas.

The Hawfinch does more damage (according to the "Gardeners' Chronicle") to garden peas than Sparrows, slugs and mice combined. Their wonderful dexterity in riddling peas is remarkable. They pierce the pods opposite the peas with their powerful bills and take out the peas, leaving the pod hanging like a piece of torn ribbon, and will go through the whole length of the rows in a very short space of time. It is absolutely necessary to take some means of precaution to safeguard the peas against this beautiful bird.

Ways and Means.

On Lord Townshend's estate at Raynham workmen have discovered a pair of Rooks nesting in a small coppice, not far from an extensive rookery. The male bird has lost his tail, apparently as the result of some accident, and the female has a broken wing. Being, therefore, unable to fly, they are said to have built their nest in a bush within a few feet of the ground, and have managed to construct a sort of ladder of twigs. The male bird contrives to pass up and down this, fluttering from step to step, in order to carry food to his sitting mate.

Colour Feeding Flamingoes!

The American Flamingo, in a wild state, is of a most beautiful scarlet colour, but in captivity fades, moult by moult, till almost white. By mixing some strong but harmless dye with the food, this colour has been almost completely restored during successive moults. But in the gardens of the Zoological Society of London this experiment has been improved upon. Here, some examples of this beautiful bird have recently been turned out into a pond swarming with small crustacea, which, in a state of Nature, form a large part of the bill of fare of this bird. As a consequence, the lost colour is returning to the plumage!

Deceiving the Starlings.

Speaking of the foolishness of birds in some respects, Mr. Richard Kearton, F.Z.S., said he had deceived them himself by substituting wooden painted eggs for the natural offspring of the birds. Two ladies also had come to him after one lecture and stated that a pair of Starlings which had nested in a barn near their house had for three seasons past hatched out barndoor fowls. The ladies had removed the Starlings' eggs and substituted a single hen's egg.

The Woodcock at Home.

Although Woodcock are at times flushed in different parts of the country, Ireland appears to be the home of the bird, as far as the British Islands are concerned. There they breed pretty extensively, and during the period of migration their numbers are considerably increased by arrivals from over the seas. It has been thought that all Woodcock are migratory, and that our home-bred birds leave us, to be replaced by aliens; but from recent observations it is just possible that some of our birds stay with us the year round, and are only migratory in the same sense as the Blackbird and Robin. Of course, it is possible that Woodcock change their habits with the season, according to the climatic condition prevailing at the time.

Nesting of the Seagull.

The Black-headed Gulls we naturally associate with the seashore, either long stretches of level sands, busy harbours, or rock-bound coasts, and one would expect such sea-loving birds to nest along the shore; but when the breeding season arrives these graceful creatures forsake the sand and wave and flock inland to lead a life similar to some of our large farm-loving birds. Upon some rough moor or pond island they nest in company, roaming over the adjacent country for food. They will follow the plough in flocks, with the Rooks and Starlings, feeding upon the grubs and worms brought to the surface by the ploughman and his team. Few birds are less harmful than these, and they should be left unmolested during their sojourn inland. Year after year they return to the same spot to breed, some of the galleries dating back beyond the memory of living man.

Advertisements continued from page 506.

SALE OR EXCHANGE - continued.

TWO Goldfinch Mules, two Chaffinches, one Bullfinch, cocks; exchange Canaries.—A. Pritchard, Woodham, Mortimer, Maldon.

WILL give Chaffinch, two Bullfinch cocks, and buff Yorkshire hen for 1906 yellow Norwich cocks, in full song.—Bingham, March, Cambs.

"CAGE BIRDS" GREAT

CANARY BREEDING COMPETITION.

A BOON TO THE FANCY.

£28 CASH IN PRIZES.

Two Sections: (1) NOVICES, (2) OLD HANDS.

1. Only Novice Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907 Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible. (Note definition of "successfully reared" given on Declaration Form.)
5. All stock birds used must be the *bonâ fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society; or may swear a declaration attested to by two responsible witnesses. Declaration Forms (see extracts printed below) are now ready, and will be sent any competitor post free on application; a postcard will do.
7. From now till the date of the **COMPETITION CLOSING, AUG. 17th,** each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

NOTE.—All entries must be sent in by August 17th.

EXTRACTS FROM DECLARATION FORMS.

For Competitors.

I, the undersigned, having entered for "CAGE BIRDS" 1907 BREEDING COMPETITION, hereby make declaration, according to the terms of the said Competition: (1) That this is the first season I have tried to breed Canaries; (2) That I have used this season .....*(state number)*..... Cocks and .....*(state number)*..... Hens, which were and are now *bonâ fide* my own property; (3) That I successfully reared* by August 13th, 1907, ...*(state number)*..... young Canaries entirely from the aforementioned .....*(state number)*..... stock birds, the said young Canaries being in good health on the said August 13th.

* By "successfully reared" is meant that the young birds are feeding themselves—that is, are requiring no assistance from their parents.

For Witnesses.

We, the undersigned, having read the Declaration of .....*(state name)*..... ..... of .....*(give full address)*..... hereby declare that, to the best of our knowledge and belief, the said Declaration is true in substance and in fact, we having seen the above birds and checked the stated particulars concerning them.

DECLARATION FORMS NOW READY.

PLEASE APPLY,

Canary Breeding Competition.

JUNE 8th, 1907. **Coupon No. 9.**

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time be should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

Barton, St. Helens, says:—"Lifebelt is the best food I ever had, saving many young birds this year." 2/6, post free. Instructions to induce hen to feed with each tin. I will give a half-crown special to every tenth bird saved and reared by Lifebelt in any First Feather Open Show, CAGE BIRDS' competition, and Crystal Palace Show. I am now in a position to book wholesale orders. Agents wanted in the British Islands. Price on application.—Garthwaite, 49, Hare-st., Grimsby.

Wars and Rumours of Wars.]

By A. C. SELF.

Never were such times since Nelson died! Whatever has come over this erstwhile quiet and not-easily-moved district? I am speaking of Ilford, Seven Kings, Goodmayes, and that vast area of the "just beyond," which has been roused from its ultra-snobocracy and turned into a seething cauldron of fierce debate and controversy. Wherever one turns one hears of nothing but bird breeding and questions as to what is an "amateur" or "novice." In the clubs, in the bars, in the street, outside churches and chapels, meeting halls, doctors' shops, and undertakers, there is a continual, and in many cases belated, hum of conversation on the now universal topic of Canary breeding. Of course, I very soon caught the infection—in fact, I walked open-armed into it.

Right outside my abode there was gathered a round dozen of my neighbours evidently just finding their way home from the aforesaid "excuses for being detained in the City on business." The subject under discussion had evidently become so hot that it had deprived them for the time being of the means of locomotion. Had they proceeded a few paces further it is just possible I should still be ignorant of the cause of this unwonted excitement. But, as I have already stated, they came to a standstill immediately outside my house. Now, as a rule I retire at a respectable hour (unless in my turn I am "detained in the City on business"), and at this very time I was wooing sweet Morpheus—perhaps a trifle unsuccessfully, which accounted for my churlishness. Therefore, in words perhaps more forcible than polite, I asked them what the, etc., was the disturbance, and why they could not, etc., engage a hall for their discussions instead of annoying respectable people at an hour when none but Owls and Bats hold their meetings. And then, reader, came my enlightenment. Then the mystic veil was lifted. With one accord they almost flew at me. "Ah! you can settle this question for us, can't you?" Of course, I said that I would try if they would tell me what it was. And if you will believe me I would have told them anything just at that moment, if it was only to get rid of them.

If appears one or two of the company had made up their minds to go in for CAGE BIRDS breeding competition, and had been canvassing their friends to give their testimony of the genuineness of their statements that they were really novices. In their haste to get these signatures they had held forth in such glowing terms of their chances of winning a prize that they had enthused their friends, who also came to the decision that they also would start the hobby—especially when it was made so easy for them, for all they had to do was to buy CAGE BIRDS, study it carefully, bny a pair of birds, and win a big prize. What could be easier? But the point which was troubling them was whether they could sign for each other. I told them I thought they could, thinking to thus get rid of them and once more retire to rest and oblivion. But no, I had reckoned without my host. Several of my interlocutors knew Canary breeding was a hobby which I had embraced with a certain amount of success, and they plied me with question after question until they had perforce to cease for very want of breath. When I could get a word in edgeways I told them that to answer all their questions would take me until Christmas, and as I had a few pairs of birds to feed between now and then I could only refer them to the aforesaid CAGE BIRDS and CAGE BIRDS ANNUAL, where they could get all the information they wanted and more besides; that they could also "take it lying down," as I wanted to do at the time. This seemed to satisfy them, for they separated, each with a determination of outdoing the other in their new-found hobby. To say that I wished them luck would be a mild expression of my wishes—I wished them to—never mind, it is all over now, and it is quite hot enough here just at present. However, since that night I have met several of my friends and have made amends for my churlishness, for, after all, if one has a hobby he loves to commune with kindred souls.

Talking about hobbies, is it not strange that this desire to take up a hobby should attack one, as it were, in the springtime? Some take up one thing, some another—gardening, photography, fowls, etc., etc., but can any hobby compare with that of Canary breeding? The gardener gets all his enjoyment in the summer time; so does the photographer; so does most of the other votaries of the god "Hobby," but the Canary breeder gets his enjoyment all the year round. In the dismal days of winter he has the song of his pets to make him almost ignore or forget the biting cold, the dreary days and long, cheerless nights. Their music is like bottled sunshine, their company breathes of cloudless skies, mossy banks, and makes one feel at peace with all the world. And in encouraging this best of all hobbies and making it more popular with the community at large CAGE BIRDS has rendered a great service. That this service is being appreciated can readily be seen by the increasing number of people one meets in train and 'bus eagerly conning the pages of this most popular organ of the bird fancy every Friday morning. I hold no brief for CAGE BIRDS, but feel it my duty to do my share to repay, perhaps in a poor way, the thousand and one helpful hints this paper has given me. And now, Mr. Novice, it is trying to help you—£28 is offered in prizes, see particulars on another page. Go in and win; or, if you do not win, try, and next year you will be as enthusiastic in the pursuit of your hobby as the writer of this short article.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

* * The Proud Goldfinch.

I think this bird is the proudest and the most beautiful I have ever seen. The way he flies from perch to perch in the aviary, in the most graceful fashion, displaying to perfection the yellow bars on his wings, is very interesting, and truly, as Mr. Rudd says, he is "An aristocratic little gentleman." We have one flying in our aviary in the garden, with a dozen hen Canaries. It is my work to clean out the aviary, and the birds do not seem alarmed at my presence. When I put a little hemp and teazle seed down, he sings and shakes himself with pride, and if any other bird goes near his beloved seed he proudly drives it away. —ANNIE PICKERING (aged 13 years), 178, Victoria Street, Chadderton, Oldham.

* Albino Blackbird.

A gentleman caught a splendid Albino Blackbird on December 23rd. He exhibited it at Chirnside on January 1st, where it won first. It is a cock bird, with rare amber-coloured bill and bright eye ceres. His head and neck are whiter than the rest of his body. The inner flight of wings are also white. My father bought him for us, but he lost half of his tail in coming. We have turned him into our Pigeon loft, and feed him on Hyde's Lark Food, a few currants, and a few earthworms, and he appreciates all of them. We have also a pair of yellow Budgerigars, which are sitting on eggs, also a Siberian Goldfinch, which have all won on the show bench, and if the Blackbird lives he will be another of the team of Patterson Brothers.—GEO. PATTERSON (age 13), Chirnside.

* The Jackdaw.

We have had our Jackdaw for about eighteen months, and I am sure we would be sorry to part with him now. It is most amusing to watch his quaint ways. At first we were afraid of him leaving us, but now he flies about the neighbourhood, and we have no fear of his going away. Our Jackdaw is very sly in his ways. He hops about slowly and quietly, and then suddenly he will make a spring at something, especially if it be anything bright, and off with it, just as though we were after it. With training he talks a little; he can say "Jackey" quite plain.—J. G. Thompson (age 10), 21, Challoner Street, Cockermouth.

A Canary.

One day my father went up to feed his birds, and when he came to the cage of a yellow hen Canary he found the bird in the bottom of the cage. He brought it down into the warm house, and found out that its leg was broken in two places. He then said to me that he was going to destroy it, because it would never get better. I persuaded him not to, and we put it in a cage with its food in a glass, and hung it up in the house. In a fortnight it was up on the perch again, and in the best of health, and able to go amongst the other birds.—CHARLES EDWARD HALL (age 13), 21, Brownhill Avenue, Leeds.

Cruelty and Kindness.

The other day my sister saw some cruel boys throwing a poor little Sparrow up in the air. She went out and took it away from them. It was not dead, but stunned. As we keep birds, and have a Linnet, we put it in with the Linnet. Then we gave the Sparrow something to eat and drink, but in the evening we found it dead.—H. R. MARTIN (age 14), Pleasant View, Dunton Green, Kent.

The Weaver Birds.

The Common Weaver is found in India in well-wooded places, where it feeds on grain and the seeds of grasses. It receives its name on account of its strongly-made nest, of interwoven blades of grass, hanging from the boughs of trees, most beautiful in form, being long and well-shaped. The Sociable Weaver is found in Africa. The nest of this bird often contains several hundreds of cells, surrounding a whole tree, and requires a cart and several men to remove it.—M. PALFREYMAN (age 11), Crook's Cross, South Molton.

Use our Picture Postcards.

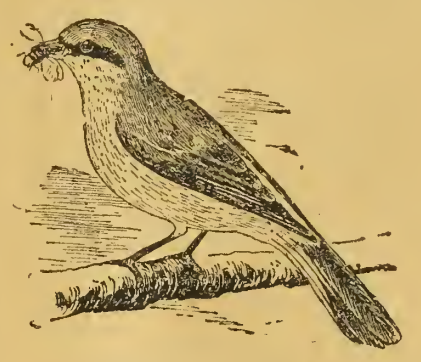
All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "The Eyrie," Salisbury-road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

A Note on the Cuckoo.

We are now in the leafy month of June, and we may still hear the note of the Cuckoo mingling with the songs of the Finches and Warblers. To-day he was calling vigorously, the sound coming with the wind from the woods as clear as it does in the early spring days. Although it was so strong and clear, yet occasionally he would repeat "cuck" "cuck" twice before finishing his full note, and in one case he sounded it four times. The cry sounded very strange, and could hardly be recognised as part of the bird's song. We shall probably hear him for another week or so before he departs across the seas, leaving the young ones to follow in the autumn. There is, apparently, no reason why the old Cuckoos should not stay with us as long as the young ones do, for if these can stand our changeable climate until the month of September, as many of them do, the old birds could surely do the same; but they evidently just wander over here, deposit their eggs in the nests of smaller birds, making use of them to rear their greedy offspring, and then depart, apparently quite careless as to the welfare of the youngsters.

The Red-backed Shrike.

Bird lovers cannot but notice that many birds frequent particular districts, and are not to be found in others which, in our opinion, are quite as well suited to their pursuits and requirements. In the Red-backed Shrike we have a striking example of this habit, for these birds are singularly local. I know spots in different parts of the country where this bird is to be found nesting year after year with certainty, and, if unmolested, the same bush will be chosen for the site of the somewhat bulky home. This Shrike is a bird that shuns the moors and uplands, for he loves the rich-cultivated valleys—the open country more than the wood. He delights in the tall, straggling hedgerows dividing the stretches of meadow or cultivated land. In some places an old disused chalk-pit, overgrown with brambles, wild woodbine and a few strong-growing thorn bushes, is his chosen haunt. Such places are warm and dry, wild flowers grow in abundance, and big bees drone lazily by. These form a considerable portion of his daily food. The habit of the Butcher Bird partakes largely of that of the Flycatcher, and, like that bird, he no sooner arrives among us than he is at once detected, for he is seen perched on the topmost branch of the hedgerow, the stump of an old tree, or the gate post leading to the meadows, and from one of these commanding positions he is able to see all that is going on, and to flutter into the air after some passing beetle or bee. Occasionally a small bird ventures too near, and the larger Hawk-like creature pounces down upon the unfortunate one and beats the poor little fellow to death with his powerful hooked beak. Sometimes we may see him flutter down to the ground and search among the rank grass for the larger insects, or possibly some small field mouse. During his stay with us this bold bird can have no difficulty in procuring food. Half-fledged birds are



The Red-backed Shrike.

plentiful, and he can easily find nests full of callow young ones. His short wings do not fit him for the chase; he is unable to fly down and capture his victims in the manner of the Hawk; but he is, if anything, more dangerous than the larger bird. Many small birds wander unconsciously close to him, or allow him to mix freely with them. He comes upon them unawares, capturing the wounded or weakly.

The most interesting habit of the Shrike is that of impaling his victims upon the thorns of some handy bush. This is no doubt done for the purpose of tearing it to picces, for the legs and feet of this bird are not sufficiently powerful to hold its prey. Although the Shrike generally has some particular spot which one might designate its larder, the observer may often meet with evidence of his doings along the hedgerow, and, if followed up, will generally lead to the finding of the nest.

Notes and Queries.

A Fondness for Letter-boxes.

A Blue Tit has built her nest in a letter-box belonging to Mr. J. Searle, in Wood Lane, Long Sutton, Yorks, for the fifth year in succession. The bird has thirteen eggs this season, and up to the present has already successfully reared in the nest in this letter-box no fewer than 43 birds.

The Lapwing's Weird Ways.

The wild, weird ways of the Lapwing have somewhat abated. He has courted and nested, and his mate is now busily tending the downy chicks in the fast growing corn. Approach the haunts of the bird, and he quickly takes wing, rushing upwards with swift wing beats, turning sideways with one wing pointing to the sky, exposing the whole of the back and outstretched wings; the next instant he has turned; now the opposite wing is uppermost, showing the underpart of the body; a quick transition from black to white; and so he continues rushing round the field at a great rate, meanwhile calling repeatedly, but a different note to that of the early spring. He is anxious for the young ones, but he knows they are safer than the eggs were in the nest.

Bird Song in June.

In the month of June we get the sweetest notes from wild birds still in song. The passion of the spring is past, the birds sing now for very joy and gladness. There is no rivalry, no mad rush through the strain, breaking off halfway and finishing with a wild scream, as many of them do. The song as rendered now is slower and more tuneful, each note is full and round, and sung with deliberation and method. Get under a tall hedge and listen to the song of the Linnet, such round, full notes can hardly be recognised, so much do they differ from the hurried jerky music of the spring. The song talk of the Greenbird is a study in melody. Who says the Greenie has no song? Listen to him now in the month of June. His is a contented, pleasant trill, without much variation, 'tis true, but delightful to listen to along the breezy hedgerows.

The Nightingale in Scotland.

"The Scotsman" prints an interesting letter, dated 1889, from a Lady Margaret Cameron, wherein she says, "A Nightingale was heard for three weeks, and also seen, during the month of June, 1889. Thermometer 90 in the shade in May. Very hot all May, June, and July, but cold and wet in the south and east of England." This is particularly interesting, as the bird of melody is supposed never to reach beyond York, but one is inclined to think there is just as much possibility of the Nightingale straying out of his course, as some of the rare birds which from time to time reach these shores as stragglers. The note as to the weather conditions would help one to think it might be a genuine case. Doubtless the lady was well acquainted with the song of the Gale.

Bird Sanctuaries.

By the efforts of protective societies and private persons, several real bird sanctuaries exist in the country, and in size they extend from half an acre of wood to miles of moorland and seashore. Although our commoner birds are well able to hold their own, and need no protection beyond that of the law, yet many species of rare birds require the most careful watching, and as much seclusion as it is possible to give them. When a stretch of woodland is given up to wild bird life, it has been found that the larger birds are equally quick to take advantage of the facilities for nesting in security. Consequently, Hawks, Owls, Jays, and Crows increase rapidly, and these prey upon the smaller and equally interesting birds, so that unlimited protection comes as a mixed blessing. In the case of the Hawks and Owls they can be left to themselves, as they roam far and near, and are always running into danger, but with the Crow family it is another story. They increase rapidly, and pilfer the nests of eggs and young birds in the immediate vicinity, so that hardly a warbler can be found in a small wood where a family of Jays or Carrion Crows frequent.

Advertisements continued from page 526.

WANTED—continued.

WANTED, Canaries, any number, weekly, for cash; write, stating full particulars and price, to J. Thorn, 37, Plumstead-rd., Woolwich. Telephone, 365 Woolwich.

WANTED, chicks or Canaries, or Goldfinches; cock Greenfinch Mule, big bird, 5/-; pair of riding trousers and leggings, 10/-; harmonium, 10/-, maker, Hiller, cost £9 9/-.—Long, 18, Prout-rd., Clapton.

SALE OR EXCHANGE.

Mainly British
To be Sold or Exchanged

SELL or exchange pair 1906 hand-reared Hawks; what offers?—Green, Stanley-st., Bourne, Lincs.

FOR sale or exchange, four good cock Linnets, for good pair of Norwich Canaries.—H. Hamans, 29, Willis-st., Poplar.

COCK Blackbird, 2/6; four hand-reared cock Chaffinches, 10/6; two-year-old Linnet Mule, 8/6; full song.—Smith, Jeweller, Kirton Lindsey.

COCK hand-reared Linnet, muler, 7/6; exchange hen Canaries or anything useful.—Winstone, 1, Victoria-ter., Dukes-rd., Southampton.

SELL or exchange anything useful; splendid dark cock Goldfinch Mules; good English history wanted.—Bennett, Southfield, Radstock.

LARGE cock Goldfinch and hen Bullfinch, mated, for good Yorkshire or Norwich cock, singing.—Patrick, 38, Doris-st., Ringsend, Dublin.

WILL exchange cock and hen Bullfinch for young Canary cock.—Whittaker, Old Vine Bridge-st., Newcastle, Staffs.

SALE or exchange anything useful for several pairs of Greenfinches, Chaffinches, Bramblefinches.—C. Chapman, High-st. South, Dunstable.

"CAGE BIRDS" GREAT CANARY BREEDING COMPETITION.

A BOON TO THE FANCY.

£28 CASH IN PRIZES.

Two Sections: (1) NOVICES, (2) OLD HANDS.

1. Only Novice Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907 Canary breeding season now in progress.
4. The young Canarics must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible. (Note definition of "successfully reared" given on Declaration Form.)
5. All stock birds used must be the *bonâ fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society; or may swear a declaration attested to by two responsible witnesses. Declaration Forms (see extracts printed below) are now ready, and will be sent any competitor post free on application; a postcard will do.
7. From now till the date of the **COMPETITION CLOSING, AUG. 17th,** each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

NOTE.—All entries must be sent in by August 17th.

EXTRACTS FROM DECLARATION FORMS.

For Competitors.

I, the undersigned, having entered for "CAGE BIRDS" 1907 BREEDING COMPETITION, hereby make declaration, according to the terms of the said Competition: (1) That this is the first season I have tried to breed Canaries; (2) That I have used this season .....*(state number)*..... Cocks and .....*(state number)*..... Hens, which were and are now *bonâ fide* my own property; (3) That I successfully reared* by August 13th, 1907, ...*(state number)*..... young Canaries entirely from the aforementioned .....*(state number)*..... stock birds, the said young Canaries being in good health on the said August 13th.

* By "successfully reared" is meant that the young birds are feeding themselves—that is, are requiring no assistance from their parents.

For Witnesses.

We, the undersigned, having read the Declaration of .....*(state name)*..... ..... of .....*(give full address)*..... hereby declare that, to the best of our knowledge and belief, the said Declaration is true in substance and in fact, we having seen the above birds and checked the stated particulars concerning them.

DECLARATION FORMS NOW READY.

PLEASE APPLY,

F. CARL, 154, FLEET STREET, LONDON, E.C.

BUSINESSES.

FOR DISPOSAL

one of the **Leading Live Stock Businesses** in the United Kingdom, situated in the best possible position in one of our most fashionable watering places. The business has been established several years, and in addition to a steady local trade has a large connection amongst our leading Nobility and Aristocracy. Fullest particulars and details will be furnished, and satisfactory reasons for disposal given.

This is an exceptional opportunity for a lady or gentleman fancier, the establishment being of a class entirely different from the usual run of live stock stores. Principals only treated with. The proprietor would be willing to offer easy terms to anyone suitable, as he is desirous that the status of the business should be maintained.

Apply in first instance to BOX Z, CAGE BIRDS, 154, Fleet-st., London.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

BOOKS.

THE HYGIENE OF BIRD KEEPING.

By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.

Price 1/1, post free from CAGE BIRDS Offices,

154, FLEET STREET, LONDON, E.C.

OPINIONS OF THE PRESS.

LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."

COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

BIRD NOTES

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size. The sale this season is phenomenal; never before has it been near so great, and this owing to its merit and merit alone.

W. RUDD,

THE Bird Specialist,

NORWICH.

Telegrams—"CANARIES, NORWICH."

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

CLUB REPORTS.

LEYTON & DIS. C.B.A.

Meeting held June 3rd. An interesting lecture was given by Mr. Morris on colour feeding. Many questions were put and answered by him to the satisfaction of all present. A hearty vote of thanks to Mr. Morris brought a pleasant evening to a close. B. F. FORSE, Hon. Sec.

READING AND DIS. C.A.S.

Meeting June 5th. Very good attendance to hear a very excellent paper on "Hybrids" by our esteemed ex-Chairman, Mr. J. North. We were favoured with an intellectual treat. Evidences of appreciation were abundant, and Mr. North was accorded a hearty vote of thanks. The question of summer outing was discussed, and it was decided to visit Aldermaston on July 6th. Final arrangements will be made at July meeting.

G. A. CHARLES, Sec.

[Kindly send club reports and club notices on different sheets of paper.—ED.]

CINNAMON CANARY CLUB.

Election of officers for 1907:—President, Mr. W. A. Bladon, 24 votes; Vice-President, Mr. E. Naylor, 15 votes; Committee, Mr. E. Godley (22), Mr. W. Dormer (19), Mr. C. L. Quinton (17), Mr. J. Wones (14), Mr. H. Tams (13), Mr. A. Bentley (11), Mr. G. Crabb (10), Mr. F. W. Baker (10); Auditors, Mr. J. Dobson (20 votes), Mr. T. Heath (19 votes); Judges, Mr. T. Heath (25), Mr. J. H. Roe (23), Mr. J. Robson (20), Mr. J. H. Payne (18), Mr. E. Godley (14), Mr. H. W. Battye (13); Hon. Secretary, Mr. R. J. Pretty, 25 votes.—Signed, Thos. Heath, J. Dobson, scrutineers. Forty-three voting papers were sent out and 28 returned. The result of the voting of the members of the Cinnamon Canary Club on rule 17 has resulted in 20 votes being recorded in favour of the rule standing, and one against. For novice definition No. 4 nine votes, and No. 3 five votes. R. J. PRETTY, Hon. Sec.

GLASGOW SOUTHERN C.A.

Meeting held June 3rd, Mr. John Renwick in chair. Mr. A. Marr, 55, William Street, was admitted a member. It was agreed to grant the loan of our frame to the National Derby for their show in September. Mr. R. M'Quillan gave a paper on the development of the Scotch Fancy Canary during the last 40 years, and showed models of the different styles of bird during that period. He considered we had got as near perfection as possible now, but within the last two or three years certain traits had been introduced in the endeavour to produce top-end at the cost of other valuable points in the construction of the Scotch Fancy Canary. Mr. M'Quillan strongly advocated the formation of a National Association, to be represented by all legitimate clubs and societies, for the purpose of adopting a model and framing rules for all exhibitions. A discussion followed, Messrs. Stewart, Gillies, and Jolliffe taking part in it. Mr. M'Quillan was awarded a hearty vote of thanks for his paper. JAS. FLEMING, Sec.

CLAPHAM AND DIS. OPEN C.B.A.

Meeting held 3rd inst., at the Alexandra Hotel, Clapham Common. The following officers were elected:—Patron, A. C. Morton, Esq., M.P., and I. W. Domoney, Esq., L.C.C.; President, Percy M. Thornton, Esq., M.P.; Vice-Presidents, Messrs. John Frostick, W. A. Lott, C. T. Maxwell, S. A. Sandy, Allen Silver, T. R. Trower, and W. H. Vale; Chairman, Mr. W. H. Vale; Vice-Chairman, Mr. E. Hathaway; Treasurer, Mr. C. T. Maxwell; Auditors, Messrs. A. Willis Browne and F. B. Bosworth. A representative committee was formed for each section of the Fancy—viz., eight for Canaries, five for British, one for Foreign, and one for Hybrids. The rules, it was generally agreed, were as fine a set as could be got together. As this is a new Society, it may not be out of place to mention that its membership is open to anyone in the British Isles; entrance fee is 1s., with an annual subscription of 4s. Meetings, first Monday in each month, at the above-mentioned hotel. First Feather Show at Headquarters on July 17th. The following were nominated for membership:—Messrs. I. Brighty, A. C. Lucas, T. G. Morris, A. J. Payne, T. J. Smith, and H. Yeoman. A vote of thanks to the Chairman brought a busy evening to a close.

S. H. W. BAKER, Hon. Sec.

KENT COUNTY C.B.A.

Meeting held at Dover June 5th, Mr. Campanay in chair, the Chairman and Vice-chairman being absent owing to illness in their respective families. The voting papers re Annual Show were then opened in an adjoining room by the scrutineers, Messrs. Reeve and Raynor, who reported that 24 were in favour of and 9 against. Several county members suggested that the show should be held in another town, which view was strongly coincided with by the Dover members of the committee, the Secretary having previously written several of the county towns on the subject, who all declined. Therefore, the show will again be held in Dover this year, at an early date in October, if possible, if that can be done without clashing with neighbouring societies' shows. The Secretary reported that upwards of £4 had been either collected or promised towards the Cup Fund. All those members who have not already done so, and intend doing, will greatly assist the committee in their endeavours to obtain cups for competition in each section, by sending along their subscriptions as early as convenient. Several specials were also promised towards the show. Others willing to give please communicate with the Secretary early, in order that they may appear in the schedule.

GEO. SANDERSON, Hon. Sec.

DARLINGTON C. & B.B F.A.

Meeting held June 5th, Mr. W. A. Simpson in chair. The chief business was classification for show on November 2nd. Twenty-five classes were arranged. Entries for our Members' First Feather Show to be left at the Club House, June 28th, the day previous to the show. Birds to be staged by 2 p.m. on Saturday. Entry fee, 6d. per bird.

R. S. BLACK, Sec.

SOUTHERN NORWICH PLAIN-HEAD CLUB.

Our members have voted 2 to 1 for Rule 17 standing. The voting for judges to select their ideal from drawings accepted by the S.N.P. Club was as follows:—J. H. Payne, 25; J. Robson, 25; T. Heath, 24; G. Gardner, 20; C. A. House, 19; C. E. Silk (Emsworth), 8. There were 15 judges' names voted upon. F. S. MATTHES, Hon. Sec.

GLASGOW & WEST OF SCOTLAND N.M.B. & F.B.A.

Classes and judges for above Association's Show, to be held in Glasgow on 15th and 16th November, have now been fixed as under:—Norwich Plainheads (17 classes), Mr. A. G. Camcron, Kelso. Crests (5 classes), Mr. C. Campbell, Stirling. Borders (12 classes), Mr. J. Smillie, Kilmarnock. Yorkshires (7 classes), Cinnamons (2 classes), A.O.V. (2 classes), Mr. Bailey, of Bailey and Swanger, Bradford. Mules, British and Foreign (25 classes), Messrs. Parker Robinson, Barrow-in-Furness, and J. F. Dewar, Edinburgh. J. BROWN, Sec.

LANCASTER AND DIS. C.B.S.

Meeting held June 1st, Mr. S. Mullincr in the chair. Rule 17 and the definition of a novice and amateur was the chief business of the evening. After a brief discussion on rule 17, it was put to the vote, which it was carried by a good majority in favour of rule 17 standing as it was. Definition No. 3 was adopted for what should constitute a novice. Owing to the bad breeding season, it was decided to cancel former date chosen for Nest Feather Show, and July 20th was decided upon. Members are doing very little better the second round, the chief complaint unfertilised eggs; only about one member that can boast of a dozen birds on the sticks at present. Next meeting July 3rd, 7.30 p.m. H. J. BROWN, Hon. Sec.

WEST BROMWICH AND DIS. C.B.S.

Meeting held June 5th for the purpose of electing officials and passing rules. There was a very satisfactory attendance, and six members were enrolled. The following officers were elected:—Chairman, Mr. G. Key; vice-chairman, Mr. E. Bayliss; treas., Mr. T. Green; sec., Mr. T. Duffield; asst. sec., Mr. J. H. Jennings; auditor, Mr. E. Carter; committee, Messrs. Beck, Hall, Smith, Fellows, Viles, Sturgess, Morton, and Lea. Each of 16 rules was read and passed. With the exception of about four of them they were passed as read, one was omitted, and the other three were altered to the benefit of the society generally, and praiseworthy comment was made about them.

J. H. JENNINGS, Asst. Sec.

YORKSHIRE CANARY CLUB.

The following is the result of the scrutiny re voting in connection with the above:—President, Alderman Jas. Freeman; chairman, Mr. D. Sunderland; vice-chairman, Mr. J. E. Brotherton; sec. and treas., Mr. J. Greaves; asst. sec., Mr. S. Dean; auditors, Messrs. R. Alderson and T. Clegg; committee, inside Yorkshire, H. W. Battye, W. H. Shackleton, R. Sutcliffe, W. A. Cowgill, R. Garnett, F. Hammond, W. Crabtree, J. Bailey, E. B. Denton, A. Ambler; outside Yorkshire, G. W. Cuthbertson, A. Hirst, J. Dexson, J. F. Gibbons, A. E. Patrick. It being the feeling of all members present that the services of the late secretaries should not be lost to the committee, Messrs. Mundell and Broadley, along with Mr. R. Halliday were co-opted to that body.

JOHN GREAVES, Sec.

SOUTHERN YORKSHIRE C.C.

Annual General Meeting.

There was a gratifying attendance of members at the annual general meeting of the S.Y.C.C., held on June 7th at the "Napier," High Holborn, W.C. The scrutineer's report, as follows, was read:—Voting for officers: President, R. L. Crisp, 51 votes; vice-presidents, F. Easterling, 44; J. Robson, 41; H. Knight, 36; J. Tyson, 35 votes. London Committee: J. Rennie, 32; L. Daintry, 30; H. Peverall, 26; W. Gladwin, 26; J. W. Ramsden, 24; G. H. Couzens, 24 votes. Provincial Committee: Captain Fellows, 31; W. G. Elsmore, 31; A. E. Patrick, 30; E. A. Lovell, 27; C. J. Howlett, 26; W. J Coffin, 26 votes. Secretary (7 nominations): R. P. Broome, 46 votes. Treasurer (8 nominations): R. L. Crisp, 41 votes. Auditors (24 nominations): G. F. Males, 35; J. Rennie, 16 votes. If Mr. Rennie is unable to take dual office, Miss A. B. Craddock, 15 votes, is runner-up. Voting on agenda:—Motion 1, for 24, against 0; 2, for 7, against 0; 3, for 14, against 30; 4, for 27, against 7; 5a, for 30, against 3; 5b, for 24, against 6; 6, for 28, against 4; 7, for 13, against 16; 8, for 26, against 8; 9, for 27, against 8; 10, for 19, against 13. Sixty-one voting papers were received by me; of these 17 recorded no vote on any motion upon the agenda; with many the agenda portion was not returned at all. No voting paper had to be disqualified. One member put a note of interrogation (?) after motion 10. I was puzzled how to count this, so left it out. On Motion 3: Shall the Club become affiliated to the C.B.U.? one member voted in favour with this reservation: "In favour of joining if officials and members think it will advance the interests of the Society." Six voted against, with the following reservations: "I think a specialist club well able to manage its own affairs." 2. "No; If it be found possible to support sufficient clubs not affiliated to the C.B.U." 3. "No useful purpose would be served, so I vote against." 4. "Not as Rule 17 stands." 5. "Being a specialist club, holding no shows; it is not necessary." 6. "A useless expense; most members will have already paid the affiliation fee through their local club."—G. E. WESTON (scrutineer).

A tea service was kindly offered by Mr. Ramsden to the members gaining most points whose birds were looked after by his wife or daughters. A teapot, value 30/-, and medal were also offered by Mr. Ramsden to the member gaining most points on his "Pure Pepper." Mr. Ramsden was heartily thanked by the members present for his generosity. Mr. Easterling kindly offered a silver cup, value £2 2/-, to the member gaining most points on "Ramsden's Pure Pepper," purchased from him.—R. P. BROOME, Hon. Sec.

It was decided by 12 votes to 6 that the S.Y.C.C. shall not affiliate to the C.B.U.; that the Novice classification shall read the same as for the champion section; that "no judge shall officiate at more than two of the Club's competitions (the Novice and the Champion)", be sent as a recommendation to the committee; that in future all voting papers shall bear a number, and be initialled by the secretary; that breeders' cards, etc., be accepted for insertion in the rule books.

DULWICH AND PECKHAM C.B.S.

Monthly meeting held June 6th. Mr. J. W. Cranfield read a paper on the Norwich P.H. Mr. G. F. Woolhouse, in the chair, said there was no need for him to introduce Mr. Cranfield, as he was a fellow member and well known to all. Mr. Cranfield dealt with his subject in a very able and interesting manner, which was much appreciated by those present, and upon Mr. Cranfield resuming his seat, a lengthy and interesting discussion took place, in which the question of type and colour seemed to arouse most interest. Hopes were expressed that the efforts now being made by the S.N.P.H. to get a universal type fixed for the Norwich would be successful. Mr. Hodson proposed, and Mr. Legg seconded that a hearty vote of thanks be accorded Mr. Cranfield for his paper, which was carried unanimously. The Chairman made a few remarks as to the preparation being made for the Young Bird and Great Annual Open Show, and brought the meeting to a close at a late hour.

W. HODSON, Hon. Sec.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at east 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

*Oct. 4 and 5.—**Burnley** (J.H.R.)
*Oct. 10.—**Peterborough C.B.A.**
*Oct. 11 and 12.—**Great Harwood** (J.P.H., D.B.)
Oct 12.—**Broughty Ferry C.B.S.** (J.K., W.W., C.C., P.P.)

(Secretaries desiring the initials of their Judges inserted, should forward same on at once.)

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

THE FIRST FEATHERS OF 1907.

HYSON GREEN & DIS.

A very successful First Feather Show was held on June 8th. Forty-nine entries were received, and a very fine sample of young birds they were. The interest in the Society seems to be increasing, and there were many visitors to its first show. Mr. R. Rhodes judged, and gave every satisfaction. YELL. NOR. (5): 1, Deverill; 2, Sharp; 3, Birch. BUFF (4): 1, Sharp; 2, Hill; 3, Bramley. TICKED YELL. (9): 1, Bramley; 2, Sharp; 3, Hill. TICKED BUFF (12): 1, Andrews; 2, Hill; 3, Barnes. HEAVY-MKD. OR GREEN: 1, 2, Hills; 3, Willis. CREST, BUFF (4): 1, Bertie; 2, Wolfe; 3, Brown. A.O.V. (1): 1, Hill. C.B., BUFF (3): 1, Birch; 2, Rolling; 3, Wolfe. A.O.V. (1): 1, Bertie. BRIT. HARDBILLS (2): 1, Andrews; 2, Garton.

GLOUCESTER F.S.

This Society held their first Nest Feather Show on June 4th, at the Ram Hotel. Two classes were given for Norwich Plainheads, and two or three very smart youngsters were staged. Mr. J. H. Payne made the awards. CLEAR NOR.: 1, c, Stephenson, grand colour, nice shape, lovely back, well up in quality, good wings and tail, nice exhibit, buff; 2, vhc, Wasley, good shape, nice feather, neat head, beaten in colour; 3, hc, Houghton good shape and colour, not so neat in wings. MARKED: 1, spl, Houghton, fine shape, lovely colour, neat tail, wings well braced, grand quality, a gem; 2, 3, Stephenson, good shaped body, not so high in colour and quality; third four-pointed buff hen, nice shape, good quality, clean cut; vhc, Wasley.

EXETER.

The inaugural exhibition of the newly-formed Exeter and District Cage Bird Society on June 4th was a great success. The quality of some of the exhibits was above the average, and before another month comes round the youngsters will have improved, which will make the competition somewhat keener. The arrangements were satisfactorily carried out, but another month the Society will have to look out for a larger room. The results should lend additional interest to the forthcoming First Feather Show. The judge (Mr. J. Rushmer) gave entire satisfaction in placing the awards, and the officials are to be heartily congratulated on their first venture.

YELL., NOR.: 1, Parker, neat head, cobby body, nicely carried wing and tail; 2, Pomroy, heavy variegated. BUFF: 1, Parker, similar type to former winner; 2, Denham, ticked on head, nice beak and head, good wing carriage; 3, Moles, variegated, should make a good stock bird; 3, 4, Miller. CRESTS: 1, Moist, wing and tail marked, nice round crest, neat centre, and small beak, good full body; 2, Evins Bros., clear body, grey, beautiful fitting crest, good radiation, nice wide feather, centre a trifle too far back, a very taking exhibit, quite a baby; 3, Williams, broken green, heavy crest; 4, H. Denham, wing and saddle marked, close up, but shows more beak; vhc, Evins Bros. (3), H. Denham, Miss Pickard; hc, Denham, Stiling. CRESTBRED: 1, 2, Evins Bros., winner wing and eye marked, nice entrance, excels in frontal feather, second heavy variegated, longer in beak, and does not measure so well in frontal; 3, Williams, fairly good feather, but failed to measure with winner. The same applies to 4, vhc, Denham; vhc, Pickhard; vhc, hc, c, Miss Finch; vhc, Evins Bros.; hc, Stone. YORKS. YELL.: 1, Churchward. BUFF: 1, Williams, nice wing and tail, well filled in back and neck; 2, vhc, Stilling, fair back and wing, not the best of tail; 3, Williams, nice beak and head, thin in neck, had the best packed tail in class; 4, Churchward, fair youngster; hc, Miller; c, Stone. A.O.V.: 1, 2, Stone, Scotch Fancies, former saddle marked, latter clear. Where are the Scotch Fancies of former days? 3, Denham, broken capped silver Lizards. MULES: 1, Stone, Goldfinch-Canary; disqualified, Elston, old bird. GOLDFINCH: 1, Cummings, true Britisher, nice blaze, good wings and moonings, in tip-top condition, very steady; on the small side; 2, Sercombe, failed to winner in steadiness and condition, bit larger; 3, vhc, Elston, rougher in feather, fair blaze and wings; 4, H. Denham.

GLOUCESTER C.B.A.

First Nest Feather Show June 6th, at the Ram Hotel, when a nice little collection of exhibits faced the judge, Mr. F. Mansfield. We expected to have seen a larger entry, but we heard several of the members had met with ill luck in their breeding operations, and were unable to put down any exhibits. We trust they may be able to do so at the next show, which we understand will be held one Saturday next month. The birds put down on this occasion were a nice level lot, good in shape, and well up in colour, feather, and quality. The Hon. Secretary, Mr. J. Houghton, captured the special for best bird with a very smart and typical marked buff, which, with a good moult, should be well up in the prize lists at the winter shows. YELL. NOR. (6): 1, Wasley, nice shape and feather, neat head, good back, short flights, crosses wings a trifle at tips; 2, Hadley, younger, wonderful colour, nice quality of feather, bit wide in tail; 3, Gwilliam, pale colour, nice shaped body, good back, trifle long in tail; vbc, Herbert, good colour, neat head, quite a baby; hc, Gwilliam; c, Barnes. BUFF (9): 1, vhc, Stephenson, not full enough in neck, good stout body, flights well packed, vbc magnificent colour, good shape and full of quality, nice back and flights, and tail well packed, we liked much; 2, Hyam, nice shape and quality, bit slack in thighs; 3, Houghton, nice back, bit slack on chest; 4, Wasley, good shaped body, nice full neck, good quality, beaten in colour; vhc, Hadley, grand shape, flights well carried and nicely packed, good feather, younger; hc, c, Davies. MK. YELL. (5): 1, Barnes, mk. head, wings, and back, lovely colour, close feather of good quality, nice shape, good wings and tail, full neck, nice exhibit; 2, Houghton, mk. cap and wings, good shape, full neck, not so bigh in quality; 3, vhc, Gwilliam, mk. eyes, breast and wings, wonderful size for a yellow, good shape, nice colour, we are afraid it will come out too coarse in the moult, but should make a slashing stock bird. BUFF (9): 1, spl, Houghton, neck and wing marked, beautiful shape, close feather of good quality, splendid colour, good head, wings, and tail, a good one, held same position at the Gloucester Fanciers' Show; 2, vhc, Barnes, grand shaped body, good quality, gets well over perch, bit slack right wing, eye and wing marked, vhc nice shape, splendid feather, a few feathers out of tail handicapped it no doubt; 3, spl c, best novice, Herbert, eye, neck, and wing marked, lovely feather, nice shaped, good head and neck, short and well packed flights and tail, a hen, therefore lost in colour, very nice youngster; 4, Hyam, mk. eyes, back, and right wing, nice colour and shape, bit long in tail; vbc, Wasley, four-pointed, nice shape and feather, and well balanced markings; hc, Hadley. CREST OR CRESTBRED: Only one entry; 1, Roylance, a well-feathered and good-skulled C.B.

BRIGHTON F. & F. A.

Show held at the Unicorn Hotel, North Street. Two cage bird classes fetched four entries. The special for best bird in show was won by Mr. Gibb with a very nice Linnet. CANARY, A.V.: 1, 2, Gibb. BRITISH BIRD: 1, spl, Gibb; 2, Miss Holmes.

W. GREGORY, Hon. Asst. Sec.

BEDFORD.

Show was held on June 6th. The birds staged were in advance of last year, especially in head and type. The winning birds were of excellent quality throughout, especially the three winning buffs, which caused the judge, Mr. H. Gentle, some difficulty in separating them. YELL. NOR.: 1, Gould; 2, 3, Millard; vhc, Osborne; hc, Mortimer; c, Wiggins. BUFF: 1, Gould; 2, 3, Millard; vhc, Wiggins; hc, Corrie; c, Osborne. MKD. NOR.: 1, vhc, Osborne; 2, Millard; 3, Corrie; hc, c, Mrs. Gray. CRESTED, ETC.: 1, 2, Smith, with a couple of excellent young Crests.

HUCKNALL TORKARD C.B.S.

First Feather Show (Open) held on June 8th, at the Seven Stars Inn, when some very nice youngsters were on view. Mr. W. Vardy judged, and his awards gave satisfaction. CL. YELL. NORWICH: 1, Pepper, grand type, quality, and colour, but rather small; 2, Brown. BUFF: 1, Twine, grand type, colour, and quality, rather young; 2, Pepper, good type, nice quality and colour. YELL. MKD.: 1, Winterbottom, nice vgtd., grand type, quality, colour, shade small; 2, Twine, nice type and colour, on the young side; 3, Marshall, a nice bird. BUFF: 1, spl, Butler, wing mark, grand type, full of quality, nice colour and size, a good bird; 2, spl for second best, Twine, good vgtd., has size, colour, and quality, well worth his place; 3, Hallam, another nice vgtd., looks like a hen; vhc, Pepper; hc, Brown; c, Twine. BUFF, DK. CREST: 1, spl, Riley, wing mkd. dark, good veiny crest, nice size; 2, Twine, wing mkd. dark, nice bird. LIGHT CREST: 1, Twine, very fair exhibit. YELL. CRESTBRED: 1, Twine, rather small, but full of quality. BUFF: 1, 2, Riley, two excellent birds, first has most substance; 3, vhc, Twine, two good youngsters; hc, c, Haywood. Mr. G. Pepper won the special for most points in Norwich, and Mr. C. H. Twine in Crest and Crestbred.

GREAT HORTON.

The best show held in Great Horton for years was the verdict passed on that of the Great Horton O.S., which was held in the Congregational Schools, on June 8th. The entries totalled 190, and the quality generally was splendid. The winners of specials for most points in the show were Messrs. Brayshaw and Jowett, Mr. J. W. Reed coming second, and Mr. W. Blakey third. The latter gentleman also secured the special for most points gained by a novice in cinnamon marks, and that for the best vho in same section, Mr. F. Hammond securing that for the best fourth. The British Bird class was a great success, and very encouraging to the members of the newly-formed club. Mr. Dean and his committee are to be congratulated, not only upon the excellence of their arrangements, but also upon the success which attended the same. Mr. T. Bennett judged with his usual care, and his awards were well received.

YORKS. YELL. (30): 1, spl, Reid, splendid type and carriage, full of quality, and a grand colour; 2, Whittaker, rare shape and style, beautiful colour and quality, hardly so neat in wing carriage; 3, Edmondson, grand shape, colour, and quality, on the small side, should moult out well; 4, hc, Cruise, very smart Yorkie, good all through, and had it been higher no one could have grumbled; vhc, Mail; c, Fortnam. BUFF (25): 1, spl, Cruise, grand shape and carriage, splendid quality, a real gem, won well; 2, Edmondson, very similar bird, rare shape and style, a real topper, and must have pressed very hard indeed; 3, Wilson, not quite at its best, but in a few weeks time should show up well, grand shape, quality, and colour; 4, Burden, capital quality and style, nice colour, just a shade strong; vhc, Reed; hc, Holmes; c, Chittenden. TKD. YELL. (23): 1, Midgley, ticked on head, full of colour, very shapely and stylish, a really nice bird; 2, Ludbrook, long, well drawn bird, rare shape, grand wings and tail, beautiful style and quality; 3, Saggett, beautiful colour, stands well, not quite so well drawn behind; 4, Hunter, grand lengthy bird, good style and feather, not quite so neat in head; vhc, Hudson; hc, Wilson; c, Reed. BUFF (24): 1, spl, Young, extra grand shape and position, beautiful feather, and nice colour, a topper; 2, Brayshaw and Jowett, splendid shape, size, and colour, nice wings and tail, but not quite so smooth underneath; 3, Wilson, extra fine in quality of feather, grand colour and shape, but trifle short behind; 4, Ludbrook, splendid shape and style, nice feather, not quite so fine in head; vhc, Whittaker; hc, Smith; c, Fowle. UNEVEN MKD. YELL. (11): 1, spl, vhc, Brayshaw and Jowett, nice, slim, well-positioned bird, capital quality and colour, nice wings and tail; 2, Reid, very rich colour, splendid shape and style, nice feather, rather on the large side; 3, Gibson, splendid quality and shape, stands well, a very nice exhibit; 4, c, Wharton, splendid colour, shape, and position, not quite so tight in feather; hc, Naylor. BUFF (8): 1, Smith, grand long bird, beautiful soft silky feather, splendid shape and position; 2, Clark, marked head, eyes, and wings, extra good quality and shape, stands up well; 3, Ross, eye and wing marked, nice size, capital shape, carriage, and quality; 4, Holmes, grand colour and quality, nice shape, but just a trifle wild; vhc, Gudgeon; hc, Murgatroyd and Son; c, Wilkinson. CINN. MKD. YELL. (14): 1, spl, Simonett, eye, wing, and head marked, beautiful slim shapely bird, stands like a soldier, rare quality, nice colour; 2, Blakey, another gem for colour, quality, and shape, stands well, but does not brace wings quite so neatly; 3, Chittenden, grand colour and position, a big, bouncing bird; 4, spl, Hammond, capital shape, very long and slim, full of quality and style; vhc, Murgatroyd and Son; hc, Allen and Swaine; c, Brayshaw and Jowett. BUFF (12): 1, Hartley, marked on wings only, but the best of shape and position, extra grand quality and nice colour; 2, spl, vhc, Blakey, marked eyes, wings, and head, full of quality and style, grand shape, nice colour; 3, Western, rather heavily marked, nice size, capital shape and position; 4, Oldfield, very nice quality and colour, good body, shape, and stand, but not so bandy with wings; hc, Bentley; c, Burden. BRIT. (17): 1, vhc, Mason, very handsome Wheatear and a Nightingale, two nice, steady birds, in splendid plumage and colour; 2, c, Milne, most charming Meadow Pipit, of grand colour and feather, stands well, and a very pretty Wood Warbler; 3, 4, hc, Inman, third Hawfinch, splendid feather and colour, nicely marked, somewhat on small side, fourth Greenfinch, a real gem, wonderful colour, extraordinary quality of feather, and very steady. SELL., 15/- (13): 1, spl, Bolton; 2, Casey; 3, Smith; 4, Miss Wilkinson; vhc, Normington; hc, Young; c, Hudson. SELL., 12/6 (13): 1, spl, Brayshaw and Jowett; 2, Clark; 3, Pullan; 4, Chubb; vhc, hc, Bolton; c, Kitchen.

CARDIFF.

The First Nest Feather Show was held at Naish's Royal Stores, on June 5th. The awards were made by Mr. R. Waters Norwich, Mr. T. H. Melhuish Yorkshires, and Mr. F. Jones the remainder. YELL. NOVICE: 1, 2, 3, Murray. YELL. YORK: 1, Fryer; 2, Banks; 3, Smith; 4, Jones. BUFF: 1, Smith; 2, 4, Fryer; 3, Banks. TICKED YELL.: 1, 2, 4, spl best York., spl best Canary, Banks; 3, Smith. BUFF: 1, spl, A. Fryer; 2, 3, Owen; 4, Banks. NOVICE: 1, 2, spl, Phillips. In the British section the bonours were distributed between Messrs. Smith, Pearce, and Ford.

OUTINGS.

A Day with the Glasgow and Western Counties Fanciers.

About ten days ago, writes "Invited Guest," I chanced to meet the genial President (Mr. Peter Pettigrew), of the above Society, who extended to me a cordial invitation to their club ramble to Blair Castle, Dalry, Ayrshire. Needless to say, I accepted. On Saturday last, as I made my way to St. Enoch's Station, I met the following fanciers, Messrs. Pettigrew, McFarlane, Malcolmson, Marlin, H. Henderson, Innes, Young, Adam, Connelly, Edwards, Sinclair, Montgomery, Rodie, and many others, of whose names I was not cognisant. We had a splendid run to Dalry, the scenery in transit being magnificent. On arrival we were met by a number of Ayrshire and Renfrewshire members, amongst whom I noticed Mr. Murray, of Glengarnock. Mr. Martin, who acted as guide, directed us to the North Lodge, where we met the factor, Mr. Comrie, who showed us through the estate. The first item to attract our attention was a flock of young wild ducks; the mother was busy incubating another brood. We also saw young Pheasants, which had been successfully reared by a common or garden fowl. While proceeding through the vast estate, Mr. Comrie pointed out to us the various trees, the foliage of which lent a charm to the surroundings. Mr. Comrie also showed us the nests of the Song Thrush, Blackbird (which he considers the most destructive bird about an estate), Robin, Chaffinch, and Greenfinch, while the nests of the tiny Wrens were innumerable. Geordie Marlin (who, by the way, is a native of Dalry) got lost, but turned up smiling with a Bullfinch's nest with four eggs, which he intends hatching out at home. Our eyes next lit on a flock of Peafowl, the male birds being in charming feather. I understand they are hard to rear, but a few are got at Blair Castle every season. Our guide then took us round by The Castle, built in the year 1203 A.D. It is rather a quaint edifice, and is the oldest but one inhabited castle in Scotland, Glamis holding that unique position. Thence we proceeded to the Glen, where various nests were seen, including Yellowhammers, Blackheaded Buntings, Chaffinches, Greenfinches, and Redpolls. We also saw a pair of Tawny Owls busily hatching. Crossing the small brook, which runs through, we saw some grand Grey, Pied, and Yellow Wagtails. After getting over a large bit of country we arrived at the Cave. The greater majority of the party went through it, and were sorry for it (ask Secretary Adam). The wanderers were beginning to get a bit peckish, when Mr. Comrie assured us we were only a few minutes' walk from one of the farms. Arriving there, we found that "P.P." had been at one of his old tricks, having cakes, scones, cheese, and milk ready for us, to which ample justice was done. It is rumoured that a "Milk and Scone Handicap" will be held soon. It will be a close affair between "Sandy," "Mac," and Geordie. Thereafter we turned our faces towards "the Scottish Stockport," where further refreshments (of a different nature) were partaken of. A social talk on birdy matters, with a few stories and songs thrown in, finished up a very enjoyable day's outing, the party reaching Glasgow at 10.40 p.m. I take this opportunity of thanking the respected President for his invitation.

Blackburn C.B.S.

Over 20 members and friends participated in the annual ramble arranged by the Blackburn C.B.S. on June 9th. We were fortunate in our choice of date, also in having for our leaders two such noted ornithologists as Messrs. Altham and D. Bentley. They showed us some rare birds and nests, the following being amongst them:—Dipper's nest, Wood Wren and young, Greater Whitethroat and young, Garden Warbler and young, Sandpiper and young, Jenny Wren with eggs, Spotted Flycatcher with eggs, Willow Warbler with eggs. The route taken was practically the same as last year, on both banks of the River Hodder.

H. FAIRCLOUGH, Assist. Sec.

Manchester and N.C.O.S.

The country ramble of the above society took place on June 8th, and was a most enjoyable and successful day. The destination was Castle Mills, and the well-treed and shady Bollen Valley provided a delightful time to those who put in an appearance. The day proved most fortunate with regard to weather, there being no cause for complaints on this score. A round dozen turned up at the Central Station, in time for the 2.40 to Hale, consisting of Messrs. Ashmell, Creasey, Downing, Stringer, Clarke, Bleasdale, Pollitt, Lythgoe, Jones, and three friends, who were joined at Hale Station by Messrs. Raynes and Aspinall and eleven members of the Altrincham Society, making a total of 25 enthusiastic birdy men. The fields were taken to, and we were soon in the Bollen Valley. The thick hedges and close cover formed an ideal country for birds, and we soon had the opportunity of a close inspection of some beautiful nests. Amongst the nests found were those of the Linnet, Greenfinch, Chaffinch, Tit Lark, Whitethroat, Hedge Accentor, Robin, and many Thrushes and Blackbirds. After a long walk we made our way to Bollen House Farm, where a first-class tea met an early fate; Messrs. Stringer and Clarke taking firsts and specials for their capacity for egg food. In the evening a ramble round the farm and fields was much enjoyed, and here Mr. Lythgoe took a couple of photographs of the group, after which the party made its way via the fields to Mobberly Station, and took train for Manchester, the Altrincham party bidding us adieu at Hale, after arranging a ramble for July.

E. JONES, Assist. Sec.

York C.B.S.

The York Cage Bird Society had a country ramble on May 26th. The party, numbering 20, left York by the 9.55 express, and on arriving at Strensall were met at the station by Mr. W. Hatfield, who acted as guide. He took us by way of Skeriff Hutton. On our left stood out the beautiful old castle, on the right were miles of splendid country, full of bird life. At one o'clock a halt was made for refreshments, and photos were taken by Mr. H. Watson on the grand old bridge crossing an ideal beck, where we found everything looking beautiful. After lunch we doubled back by our right, crossing about five miles of beautiful country. Here we found birds of every description, including Whinchats, Meadow Pippits, Great Whitethroats, Blackbirds, Thrushes, Yellowhammers, Wagtails, Skylarks, etc. On arriving at Haxby over the moors the party partook of the good things provided by Mr. H. Dudding, Tiger Hotel. After a stay of about 30 minutes, we resumed our journey to York by way of Earswick, passing through Rowntree's model village, reaching York about six o'clock, having spent a most enjoyable day, and everybody hoped it would not be long before we had another ramble. The Society provided five prizes for the first five members who found a nest containing either eggs or young birds. Mr. Cardwell acted as umpire. 1st, H. Shorny, nest of Grey Linnets; 2nd, A. Campling, nest of five Linnets' eggs; 3rd, H. Dale, nest of Winchats; 4th, H. Chittenden, sen.; 5th, H. Chittenden, jun. Consolation prize went to Messrs. D. Hunter and T. Wright, for a nest of five Blackbirds.

T. BOYLE, Hon. Sec.

Wibsey and Dis. C.B.S.

This society held a very successful ramble on May 26th. Sixteen of the members took tram to Greengates, then walked through Apperly Bridge, Esholt Springs, to Baildon, coming back to the "New Inn" at Charlestown to tea, to which full justice was done. There were one or two British bird fanciers in the party, and a great deal of interesting knowledge was gained coming along by peeps in holes in walls, and hedges for nests, etc. As the party drew near Esholt Station one of the lightweights was helped over the hedge to settle an argument with regard to the contents of a Throstle nest, which on inspection contained a young dead bird, and was evidently deserted by the old birds. The nest was in the fork of a thorn tree, and it was only after a lot of scratches and cuts that our friend was enabled to get at it. A large amount of bird life was seen along the route, the majority being Blackbirds, Thrushes, Starlings and Swallows. After tea the ramblers had intended going through Saltaire to Shipley Glen, across to Eldwick, and down into Bingley; but owing to a heavy downpour of rain, it was decided to go through Windhill and Shipley on the homeward journey, and a call was made at the headquarters of the Windhill Society. During the halt there a challenge was thrown out for a cricket match between the Windhill Society and ours, which was accepted, and before the close of the summer this match will be played. After leaving Windhill the tram was taken at Shipley to Town Hall Square, where a very pleasant and enjoyable afternon's outing was brought to an end.

E. W. JOHNSON, Hon. Sec.

NOW OUT! NOW READY!

The finest value in a Canary Book ever offered to the public.

CLAUDE St. JOHN'S

CANARY BREEDING FOR BEGINNERS.

PRICE - SIXPENCE.

Originally published in 'Cage Birds' under the title of

"First Steps in Canary Breeding."

ILLUSTRATED 116 PAGES ILLUSTRATED

A thoroughly practical up-to-date Guide to the cult of Canary Breeding. Specially designed for the use of the Beginner in the Hobby. All about Cages (single and double breeders), Perches and other fitments, Seed Boxes, Water Vessels, etc.; the Birdroom, the Bath, First Principles in Mating, Pairing-up, Signs of Breeding Condition, Building the Home, the First Egg, Removing Early Eggs, Incubation, Egg Food, etc., etc.

THE CAGE BIRD UNION.

The Question of the Hour.

THE EXECUTIVE COUNCIL FOR 1907-8.

The result of the voting for the election of the Executive Council for years 1907-8 is as follows:—No. 1 District, Rev. Wm. Rickaby; No. 2, Mr. Parker Robinson; No. 3, Mr. J. Naden; No. 4, Mr. J. Garner; No. 5, Mr. S. Hadwin; No. 6, Mr. J. Wilson; No. 7, Mr. R. Rhodes; No. 8, Mr. W. Freestone; No. 9, Mr. T. Pope; No. 10, Mr. W. H. Love; No. 11, Mr. R. J. Pretty; No. 12, Mr. G. Crabb. The only alterations from the last Executive are in the London districts, where Mr. Pretty replaces Mr. Ramsden, and Mr. Crabb is elected in place of Mr. Hodson. Eighty-four voting papers were returned.

GEO. W. F. LYTHGOE, Sec.

A MAJORITY DECLARES FOR RULE 17.

The result of the voting on the question of Rule 17 of the C.B.U. Rules is as follows:—

92 papers returned out of 123 sent out.

72 are in favour of the whole of the Rule being retained.

20 are in favour of the deletion of the prohibition clause.

Five of the latter, however, vote against the Rule as not going far enough, suggesting a new Rule being adopted, that entries for open shows should not be accepted from exhibitors not members of affiliated Societies, or Associate Members of the Union. With this addition they are favourable to the Rule. The five societies are the Northern Crest Club, Hazel Grove, Hanley, Dulwich and Peckham, and Wimbledon. Several others (amongst them being Leeds, Chester, Bolton, and Blackburn) also advocate this addition.

Very few societies give figures of the voting for or against, but of those given the aggregate majority is in favour of the Rule standing; while a great number state that the vote in favour was unanimous.

NOVICE DEFINITION No. 3 CHOSEN.

The voting on the definition of an Amateur or Novice is as follows:—

Definition 1	8
Definition 2	7
Definition 3	37
Definition 4	25
Definition 5	6
Did not vote	9
	92

Definition 3 is:—"A Novice is one who has never won a first prize in open competition, or three first prizes in open novice classes." Definition 4 is similar, but limits the three first prizes in novice classes to be won at three separate shows.

Since sending you the result of the voting for the election of the Executive Council, five more papers have been received, but they do not affect or alter the election.

GEO. W. F. LYTHGOE, Sec. C.B.U.

SOUTHERN NORWICH P.C.

The voting by the members of the Southern Norwich Plainhead Club shows a majority of two to one in favour of Rule 17 standing.—F. S. MATTHES, Hon. Sec.

NORTH LONDON C.B.A.

SIR,—At a special meeting held May 29th, to discuss C.B.U. business, a vigorous discussion took place over Rule 17, and on putting it to the vote 23 voted that the latter portion be deleted, and five that it remain unaltered. Novice definition No. 4 was favoured by our members.—R. P. HARPER, Hon. Sec.

A "GRATE FITE" AT NEWCASTLE.

SIR,—The usual monthly meeting of the Newcastle Good Intent C.B.S. was held on June 6th. About 40 members were present, Mr. J. Shepherd and Mr. Currah occupying the chair. A better display of eloquent oratory never was heard at a birdy meeting, especially on C.B.U. Rule 17 coming up. The ball was set rolling in an earnest, eloquent, and lengthy speech by Mr. MacPartling, who moved that the rule stand as originally drafted and printed. He was just splendid, and hard hitting. In a more subdued oration Mr. Macdonald (Wallsend) seconded, with strong arguments in favour of the rule remaining. Then for the proposed deletion of the latter part, Mr. Currah came along with a strong speculative appeal for manhood and independence for the individual fancier, asserting that this rule robbed the man of that free spirit beloved of all Britishers, and every vestige of that honour which ought to be imbued in every human breast. Mr. Mackenzie (Gateshead) seconded. Then the Trojans sprang to arms, and, sir, had you been present with your stylograph, what a "feast for the gods" you could have given us. Mr. T. Robson and Mr. Crawhall, quiet, suave, and gentle, but always right and just, and speaking for the good of all, told heavily for the motion. Round after round of sound speeches rolled forth in fine frenzy, and resulted in a final triumph for Rule 17. The two Mac's fairly stormed the heights for Unionism. A great victory ended up with a most hearty handshaking all round. Outside in the Newcastle streets new meetings were at once formed at several corners, the many animated white faces under the electric lamps being the last thing I saw from the top of a departing car. What the "midnight watch" would think had taken place I cannot imagine—whether the Jarrow election, or the Usbourn dead lock, or some other national catastrophe, I know not. But certainly no meeting was ever so enjoyable to your humble servant as this.

RULE SEVENTEEN.

THE CITY AND SUBURBAN A.C.B.

At a meeting of the City and Suburban Association of Canary Breeders, held last Monday evening, Mr. A. W. Curtis very strongly protested against Mr. Pretty's action in making the statement to the members of the Cinnamon Canary Club that he (Mr. Curtis) was against the Union in any shape or form. The following letter from Mr. Pooley to the Secretary of the C. and S.A. of C.B. was read:—

June 9th, 1907.

Dear Mr. Wynn,—I have seen a statement in CAGE BIRDS that the City and Sub. delegate (Mr. A. Curtis) is against the Cage Bird Union in any shape or form. As I may be late to attend the meeting, if there is a vote taken as to whether the City and S. should continue their membership, can my vote be taken as I am in favour of continuing in the Union? Therefore, I do not think a delegate should be elected who is against the Union. I shall have much pleasure to propose Mr. Burn as delegate for the present year.—J. POOLEY.

Mr. Curtis declared that his opposition to the C.B.U. was centred against one clause, viz., Rule 17. He thought the Cage Bird Union a necessity, and had always held so. He agreed with the idea of having a Union, and he only wanted the C.B.U. to be managed on more diplomatic and firmer lines. Whether he remained their delegate or not mattered little to him. If he were elected by their favour he should continue to express his honest opinions as freely as he had done in the past. He was not in favour of too much work and responsibility being fathered on to the shoulders of the delegates. If delegates were allowed to have their own way there would arise a tendency to cliquism, and that, he held, was the very thing to be guarded against.—Mr. Burn made a warm speech, eulogising Mr. Curtis's work as delegate for the Association, and commending his public attitude on the matter, and proposed a hearty vote of confidence in him, and this was carried with applause. In the course of some remarks, Mr. Burn said he agreed with Rule 17 as far as it went, but he thought it didn't go far enough. The voting on the subject of Rule 17 was dealt with, 23 members voting for its deletion, and 12 voting in favour, out of a total membership of over 140.

The following recommendations were laid before the members, and approved of:—

RECOMMENDATIONS TO THE C.B.U.

1. That the Annual Meeting of the C.B.U. shall be strictly representative of affiliated Societies, and all subscriptions paid.
2. The first business at the Annual Meeting shall be the election of two delegates, who shall examine all credentials, forms, and report on the same.
3. The Secretary shall send credential forms to all affiliated Societies, and they shall be signed by the chairman and Secretary of the respective Societies.
4. That all proposed alteration of rules shall be sent to the Secretary of the C.B.U. at least two months prior to the Annual Meeting, and they also shall be sent to all affiliated Societies six weeks before the Annual Meeting, together with all other notices, so that instructions can be given to their delegates attending the Annual Meeting.
5. Rules can only be amended or added to at the Annual Meeting.
6. In the interests of the Union, we consider it undesirable that advertisements should appear upon the rules of the C.B.U., or upon the balance sheet, or any other printed matter related thereto.
7. That on all future balance sheets issued, the expenses incurred by the Executive Council and delegates should be shown separately.
8. That no delegate be allowed to speak more than once upon any subject, unless to correct a misstatement, or by the consent of the chairman.

Some objection was raised by Mr. Burton to Mr. Crisp's suggestion that no delegate be allowed to speak more than once on one subject, and his objections were supported with some degree of earnestness by Mr. F. J. Martin. Mr. Crisp said his intention was to defeat the aims of the garrulous member who loved to hear the sound of his voice monopolise the meeting. Mr. Martin thought that such a restriction was "Absurd and ridiculous"; the Chairman should have full power over the meeting, and the discretion of control should be vested solely in him. It was quite true that Mr. Bladon, the Chairman at the last annual meeting, in his anxiety to give everybody a hearing, had allowed too much rein, and was not sufficiently firm, but there was no reason to anticipate a renewal of such an experience. Mr. Burton thought the delegates and the Chairman ought to be the best judges of how to conduct their own meeting. Mr. Curtis said that at the annual meeting one member whose name he wouldn't mention arose from his chair so frequently to address the meeting that it seemed to him as if the meeting almost consisted solely of that one man. The question whether this suggestion should remain was then put to the meeting, and the resolution carried by 20 to 3.

A REMINISCENCE AND A MORAL.

SIR,—Mr. Tyson refers me to his letter on Rule 17. I agree there is nothing worthy an answer in his communication upon the Crested Canary Club. His remarks anent the Executive Council of the C.B.U. and its decisions, and on he himself never trying to influence the voting of C.C.C. members, are dealt with sufficiently, I think, in my reply to Mr. Greeves this week. Mr. Tyson has a bad case, and his remarks are dictated in a spirit of deliberate hostility to the C.B.U., the plain fact being that he does not want to see any good in the Union, and, morever, does not intend to. What is the worth of letters written in such a spirit? Are they worth a moment's consideration by any fair-minded man?

I have taken the trouble, since last writing, to look up the record of the ill-fated Cage Bird Club, an organisation, mark you, with objects similar to those of the present Cage Bird Union. With that club, the L.C.B.A., Mr. Tyson, Mr. J. S. Clarke, and other prominent officials of that Association, were connected as promoters, Mr. Clarke acting as secretary. The power of the C.B.C. was centred in its founders; and so it failed. In CAGE BIRDS of February 22nd, 1902, Mr. J. S. Clarke published a letter, from which the following observations are culled:—

A CAGE BIRD UNION.

It makes me laugh, and also feel sad, when I hear people discussing the ills that the Cage Bird Fancy is afflicted with, and suggesting this or that as a panacea. One says this ought to be stopped; another says that ought to be remedied; and it never occurs to the good people who say it that a little help is worth a deal of pity, and if they had supported the Cage Bird Club as they should have done, there would have been an organised force to-day capable of dealing with any malpractices that might occur. Societies, with comparatively few exceptions, are quite as much to blame as individual fanciers. The Cage Bird Club, at the zenith of its power, controlled some dozen shows, and during its regime brought one or two of the ultra clever brigade sharply to book. Then what happened? The convicted sharpers transferred their doubtful patronage to the shows (and there were plenty of them) outside the jurisdiction of the C.B.C., and doubtless continued their nefarious methods to the disadvantage of some honest exhibitor or exhibitors.

Your readers will doubtless agree with me that, had the Club been supported as it deserved, you would have had to find other matter to occupy the front page in your issue of the 15th inst. [Note.—This refers to an editorial suggesting the formation of a Union among cage bird societies.—"Country Member."] LACK OF UNITY (write it large, if you please, Mr. Editor) amongst societies and fanciers, the undoubted hostility of a small section, and, alas, the indifference of the *largest* portion of the Cage Bird Fancy, the honest exhibitors in whose interests the club was formed.

"Your rules are too complicated," was one cry (pity the feeble intellects); "Your rules deal too much with the question of fraud," said others (was ever honest man afraid of a policeman?) "They are too cumbersome," "They are unsatisfactory in many ways." Did these prophets of evil come forward with suggestions of amendment or a scheme for reconstruction? No! no! no! and no again! J. S. CLARKE.

Ex-Hon Sec. of the Cage Bird Club.

It is really a pity to say another word after such a letter as that. It speaks for itself. Could anything expose more completely the sham and humbug of the opposition to the present Cage Bird Union of Mr. Clarke, Mr. Tyson, and other officials of the L.C.B.A.?

They now have the Union they once thought so badly needed; it is established on a far, far broader basis than was their own; it has been, and is now, acknowledged and supported by an overwhelming majority of cage bird societies in England; but they themselves are not personally "bossing" it, so it becomes in their sight a thing only fit to have holes picked in it. "A little help is worth a deal of pity." "Did these prophets of evil come forward with suggestions of amendment or a schemo for reconstruction? No! No! No! And No again." But enough. Let fanciers pause, and consider well these curious things.

Coming down to the much-abused (and much misunderstood, in my opinion) Rule 17. I think the Fancy will be exceedingly ill-advised to tamper with it in any way. The parrot cry of those antagonistic to the Union has been, "It is grossly unfair, for it permits non-affiliated fanciers to exhibit and win prizes at shows affiliated fanciers cannot exhibit at, and then to come into Union shows and win prizes there." It seems incredible to me it does not occur to these people that the remedy for this state of things lies in sticking to Rule 17 and strictly enforcing it. How many shows could then possibly be held without the support of the Union? Why, none, for they could not hope to fill the classes. Therefore, there would be no shows except Union shows for anyone to send birds to. A non-affiliated fancier could not then enjoy any of the benefits of belonging to a cage bird society, nor any accruing from the Union. If he joined a society he would, of course, at once become affiliated to the C.B.U. through that society. Let us stick to Rule 17 by all means. It is absolutely necessary to the proper carrying on of the Union. As I have written in another letter this week:—Don't let yourselves be blinded by the arguments (?) of others—no matter how highly placed in the Fancy and fluent with tongue and pen—against so useful and necessary a body as the C.B.U. The latter may not be perfect yet; but the Fancy generally can make it so in time. Weigh up well the great good a C.B.U. can do to your hobby. The talk about "coercion" is so much nonsense. If we are satisfied such a body is conducive to the good of the Fancy, then it ought to be our first desire to compel all fanciers and societies to join and support it. If we stick to Rule 17, we can achieve this desirable end.

A COUNTRY MEMBER.

P.S.—It does not seem to occur to anyone that Rule 17 could be modified in one or two ways and still remain effective. For instance, it is admittedly the Foreign bird section at our shows which would suffer most if non-affiliated fanciers were barred altogether at Union shows. Well, Foreign bird keepers could be left out, and Canary and British bird keepers alone barred. Or the British bird keepers could be left out, too. Anyway, it is the Foreign bird keepers who are less "fanciers," in the strict sense of the term, than the others, and so not likely to join any cage bird society. Or all non-affiliated fanciers could still be allowed to exhibit at Union shows, but only providing they did not exhibit at non-affiliated shows, i.e., anybody who sent his birds to a non-affiliated or non-licensed show (after, say, once being warned) would be suspended (for a longer or shorter period) from exhibiting at any Union show. That, I feel sure, would work and answer well. It would bring all shows into the Union (or they could not succeed), and we should all stand on an equal footing. It is a small matter for any show to take out a licence, seeing it affords the support of all Union members in return.

MR. JOHN TYSON REPLIES.

SIR,—In reply to Mr. R. J. Pretty's vehement effusion, I am sorry if I have misquoted him (for that is absolutely unnecessary), but I am still under the impression that what I have previously written is correct, with the exception of it being West Herts instead of Watford Show. But that of itself does not alter the undoubted fact that Mr. Pretty or other affiliated member of the C.B.U. could have shown at an unaffiliated and non-licensed show in classes provided for open competition—as Mr. Pretty said could be done, distinctly and absolutely, by the authority of the Secretary of the C.B.U. Mr. Pretty is good enough to quote Mr. Lythgoe's letter, which, however, does not say that Mr. Pretty, or anyone else, is entitled to exhibit in classes provided for OPEN competition. Certainly the word "open" is not mentioned in Mr. Lythgoe's letter, clearly proving that Mr. Pretty is prepared to misrepresent opponent or friend at the shortest notice should the occasion, according to his somewhat warped and narrow judgment, demand it. And this gentleman, with his rudeness and reckless assertion, has been elected to serve on the Executive Council of the C.B.U.! I do not admit having at any time animosity against the C.B.U., but admitting, for the purpose of argument, I had such a feeling, Mr. Pretty's advent amidst the Executive would be sufficient to change such feeling for one of the deepest sympathy. Surely the C.B.U. has now reached the beginning of the end. Mr. Pretty and I have not exchanged words for some time, owing to one of his infamous statements that I had acted against the interests of the City and Suburban Society (of which he was Secretary at that time), by requesting one of their members not to exhibit at one of their young bird shows. This gentleman wrote a strong denial, and eventually an honourable member of that Society called and apologised for the wrong I had suffered, since which time I have deemed it prudent to avoid conversation with him. If, as Mr. Pretty says, I had a preponderance of members in this district (assuming that Mr. Pretty's version is correct), I venture to submit that there cannot be two opinions existent amongst intelligent and unbiassed minds that I was animated by one fixed idea, and that was to secure a straight issue on the question put before the delegates. From Mr. Pretty's circular to the Cinnamon

ALL THE YOUNG BIRDS YOU BREED

Should have their Pedigrees and particulars entered up at once in

THE STOCK BOOK.

"Simple in method, easy to understand, thorough and complete, indispensable in every bird room, and wonderful value for money."

That is the Universal Verdict of all Fanciers on this, the latest publication for the benefit of keepers of cage birds. Read the sheaves of testimony to its merits published in the last few issues of CAGE BIRDS.

Club there is no need for "Tammany" or "Gang," but evidently a "Boss" is needed, and I mistake the calibre of that body if they sit still and accept the dictation of any official in such a biassed and dogmatic fashion (see page 507 of last issue). He commences by asking members to vote on the deletion of Rule 17. This in itself is absolutely wrong; the whole of Rule 17 has never been questioned; it is an amendment to delete a portion of the rule only. Another falsehood which I must "nail to the counter" is his statement that the late C.B.C. gave medals to be won by the L.C.B.A. members. The C.B.C. awarded the medals for competition amongst the whole of the affiliated members and not to the L.C.B.A. alone. Mr. Pretty further writes that Messrs. Curtis, Dewhurst, and myself are opposed to the Union in any shape or form. This is a malicious untruth, and I maintain that any person guilty of such is not likely either by example or precept to strengthen the Council by his presence. Judging by his circular to the Cinnamon Club, whose servant he is supposed to be, we may readily conclude that not only shall we receive biassed and unnecessary instructions from the Executive Council in future, but abuse if we dare to raise a question. If Messrs. Curtis, Dewhurst, and myself were opposed to the Union, surely we would not trouble about it at all, and certainly not stand as delegates. Mr. Pretty further writes:—"Now I want your instructions as to whom I shall elect upon the Executive Council." (Mr. Stephenson, kindly note.) I ask, Did he receive instructions to elect himself? I feel sure Mr. Stephenson will forgive my little slip in the face of one of so much larger dimensions. I much regret that in the vain hope that when he arrives at my mature age that he will not have lost the instincts of a gentleman. As food for reflection on his part, one can never lose what one never possessed. And what do you think of my wit, humour, or sarcasm, or whatever you like to call it, this time, eh, my friends? I repeat a question that has been often asked Mr. Stephenson: What has the Cage Bird Union achieved to justify the expenditure of £50 incurred by its birth and upbringing to date? And once more: Which of you would invest your capital in a concern which had not done something to obtain your confidence?

JOHN TYSON.

A NORTH-COUNTRY OPINION.

SIR,—The only reasonable excuse for the opposition to the Union and Rule 17 as drafted is the fancied restriction of the individual's freedom. To progress without law is an absolute impossibility. Is there room for improvement in the cage bird Fancy, and is it possible to make any change for the better? Yes, a thousand times, yes! Let us see what one of the bitterest opponents to the Union has to say.

"Had cage bird societies in the days of the Cage Bird Club been fully awake to its advantages, it would have been in existence in a flourishing condition to-day. The subject the Manchester and N.C.O. have been recently discussing was discussed at a meeting convened by the L.C.B.A. as far back as September 26th, 1898. The minutes of that meeting read as follows:—Meeting convened September 26th, 1898, by the London Cage Bird Association, to consider the question of forming a club to take the place among the cage bird Fancy that the Poultry and Pigeon Clubs occupied in their respective Fancies. There was a large and representative muster of fanciers at the meeting, and it was unanimously decided that a society should be formed and called the "Cage Bird Club," and that the societies throughout the United Kingdom should be invited to elect delegates to assist in its formation. A Committee was subsequently elected to draw up rules, etc. And at the Crystal Palace, on Saturday, February 11th, 1899, in the presence of a large and representative gathering of fanciers, the Cage Bird Club was started. Many good fanciers, among them the late Geo. J. Barnesby and the late George Steeden, subscribed freely, and the rules of the club were circulated broadcast, but the support was meagre; only eight societies were in those days sufficiently abreast of the times to support the scheme. They were:—The Cardiff and District C.B.S., the Derby O.S., the East Suburban C.B.S., the Leicester C.B.S., the L.C.B.A., Pendleton and Salford O.S., the South-West London C.B.S., the West London Fanciers' Association. From the day of the club's decease, at frequent intervals letters have appeared in the Fancy press, asking for redress and remedy for many of the ills that afflict the cage bird Fancy, and I have read them with interest. Now that the Manchester men have decided to make a move, I will not criticise, or ask why they and other societies that should have taken a leading part did not co-operate seven years ago. Suffice it to say that those societies and individual members who supported the club tried in every way to make it thoroughly representative. Each society affiliating was entitled to elect a representative to serve on the Central Committee, and a method of decentralisation could have been arrived at if the club had received the support it merited. Rule II. The objects of this club are:—The promotion of the breeding and exhibition of cage birds; the suppression of fraud, cruelty, and dishonourable practice in relation to cage birds; the advancement and protection of the interests of cage bird breeders and exhibitors generally. In the year of grace, 1906, there is a deal of good work that could be accomplished by a 'national union of cage bird societies,' railway rates, clashing of show dates, etc."

Here we have sufficient evidence to encourage us to go on—evidence of a grand attempt to form a democratic Union that should silence all the thunderings about the unrepresentative form of the present one. There must be a great deal to do yet, and the only way to do it is by making rules that will bring all the fanciers together, and making up our minds that these things are not to be obtained free of cost. What appears to be the great obstacle is the fear of some societies not joining the Union. Had the fanciers who have so bitterly opposed the Union, who say a Union is needed, and who are now in favour of a Federation of societies, been sincere and honestly desirous of advancing the interests of fanciers, they would have given all the help in their power to get it well established, and from the inside worked assiduously to make it perfect. The societies "outside" the first year would have been "in" the second, and the freedom to show from Land's End to John o' Groats would have been as unrestricted as it was previous to the formation of the Union, with the added satisfaction of knowing that a chain of brotherhood had been welded that would make a brother's trouble general, and his joys a universal pleasure. But no, cage bird fanciers have not attained to that elevated standard yet. All the voices seem to be striving against its consummation. Envy, malice, hatred, and greed are at work to keep us apart. How long shall it be permitted by you men who desire to live nobly and act honourably? What is a hard hat or a silk muffler with ten shillings compared to a clear conscience that can only be retained by cage bird fanciers generally by such a rule as 17 without deletion? It is the Union the blow is aimed at, and Rule 17 is the convenient part that wily men know will appeal most strongly to men's cupidity, and by a show, as false as it is great, of being liberators from a yoke, they make you destroy the institution that for years has been seeking to rise and flourish in useful work on your behalf. Your freedom is not in danger, but is being sought by men who think and work to free you from the dishonesty you all know to exist. It is an injury to the public, as well as to the fanciers who honestly try to do what is right both in dealing and exhibiting. They are the best citizens who, by their conduct, seek to advance and elevate the whole by clearing the moral atmosphere, so that the rising generation may have a better opportunity to enter the hobby of a cage bird fancier, and leave it with a clear conscience of never having taken a base advantage of a brother fancier to win honour and renown. That such fanciers exist and flourish amongst us at the present time who think it clever and just to take by unlawful means, is borne in on us each succeeding show season—"clever and just," because they say everyone has the same opportunity. They are incapable of crediting anyone with a nobler mind that won't permit a dishonourable action being performed with the birds to win either firsts or specials. If ye be men who have a mind above the sordidness of the hour, you will vote for Rule 17 undeleted, and hasten the time when "man to man the world o'er" shall brother fanciers be—honest and sincere.

G. W. MACPARTLING.

P.S.—The foregoing was delivered before the members of the Newcastle Good Intent C.B.A., on June 6th, on the motion that Rule 17 stand as at present. The letter that I have quoted was published in CAGE BIRDS, February 3rd, 1906, from the pen of J. S. Clarke.

BREEDING RESULTS.

The Accrington fanciers are having a bad breeding season so far. The weather is shocking; we have had no summer yet.—A. HIRST.

I might say I am having a grand season, having over 50 young, the greater number of which are on the sticks, and I have several hens on eggs.—G. H. NEAL, Highgate, N.

Some Nottingham Rooms.

On Sunday, June 9th, I decided to have a spin on my cycle to some of the Nottingham fanciers. I first visited Mr. J. Goode. He has eight pairs up for Crest breeding and three pairs Norwich, and has bred 19 youngsters. Amongst them I noticed two very nice birds, one Crest, and one Cresthred. After glancing at his British birds, I proceeded to Mr. J. Bowers, and found him attending to the wants of his birds. He has 12 pairs for Crest breeding, and the produce up to the present are four Crests and four Crestbreds on sticks, also 12 in the nests, second round. I very much liked a grizzle Crest which he has bred. Calling upon Mr. J. Wood next, I found he has ten pairs of Crests. On going into his room, I was sorry to find he had only five young birds, this being his second round. Yet if cleanliness is anything towards success, he certainly deserves it, for his room was scrupulously clean. I visited Mr. J. Birch, who is a Norwich breeder. He has 14 pairs of Norwich up, and two pairs of Crests. From them he has bred 19 young birds, and has a number of fertile eggs in the second round. I gleaned from his conversation that his friend, Mr. G. Hill, is having a good season; he has 15 pairs of Norwich and one pair for Crest breeding, has got 29 youngsters on sticks first round, and 12 young in the nest second round, all doing well. Mr. Bexon has eight pairs of Crests, but has only three young birds up to present. My next interview was with Mr. H. Mais; he has 12 pairs for Crest breeding, and has hatched 40 youngsters, but unfortunately has lost 21 through the past bad weather. I then journeyed on to Mr. F. Cooke. That gentleman, having only three pairs of Crests, has not bred a single one up to present. In conversation he informed me that Mr. J. Onion has 11 pairs of Crests, and has only been blessed with two young birds up to now. During the morning I met Mr. A. Onion. He has 15 pairs of Crest, and has bred 40 youngsters. His son has four pairs of Crests, and produced 16 young. This past week he has removed his birds a distance of two miles into a strange room. Although he had a number of hens sitting he was fortunate enough not to lose any young birds or eggs. This, I consider, is a most remarkable occurrence. Mr. J. Cowpertwaite has 12 pairs of Crests, and has only bred three youngsters up to the present. Mr. W. Harris has nine pairs up for Crest-breeding, and has ten youngsters. The past severe weather has undoubtedly affected the backbone of the breeding season with the fanciers in this district.

WM. HEALEY, Sec. Admiral Duncan O.S.

Hard Luck for the Scotch Fancies.

Hard luck has been the store of Scotch Fancy breeders north this season, the extreme cold weather of April and May having had a bad effect on breeding pairs—non-laying hens, unfertile eggs, forsaking the young by the hens, have been the ill-fortune of not a few breeders. June has not, so far, improved matters much, although a shade milder. Some nice warm weather now may yet reward not a few who have eight to ten pairs, and in some instances have been rewarded by having one nestling as the fruits of their labours. True, some have been more fortunate, and can count their youngsters from one to twelve, amongst them some very promising birds, which are sure to give a good account of themselves. When the show season comes round the Southern Ornithological Association will have one or two surprises in store, for not a few of its members, by one of themselves, who has been very fortunate in breeding some very promising birds—some "champions," as the writer heard this particular member say in answer to a query from a chumate. We wish him all success. The National Derby Association has been adding greatly to its members, some well-known breeders having joined their ranks recently, I hear.

ROVER (Glasgow).

Good News from Swansea.

I was surprised to read in CAGE BIRDS that fanciers around Swansea, including myself, were doing very badly. I don't know where this fancier got his information from, as he is in no way in touch with the majority of breeders here. It has been a very fair season as far as I know; there are a few which have experienced very hard lines indeed. It has been my record season—71 youngsters up to time of writing, 59 are doing for themselves, and nine more hens to hatch, which will complete my season's toil. Mr. R. H. Jones is also doing very well. He has got 48, and the majority of them are doing for themselves. Mr. E. M. Evans is also doing very well; he has 35, of which 18 are doing for themselves. Mr. W. H. Love has 32, including Mules. There are four Siskin Mules, and five Goldfinch Mules. This fancier had very hard lines at the commencement of the season, but seems to be doing all right now. Mr. T. Kirby, St. Thomas, had very hard lines at the commencement of the season, but I am pleased to see that he is doing very well now; he has 28 youngsters, all Norwich. Mr. A. Taylor, Port Tenant, is also doing very well, according to the pairs put together; he has 17 young Yorkshires. Mr. S. J. Nicholas was doing very well when I last saw him; he had 25. Mr. D. A. S. Longden is doing well; the number is not high, but what he has got he is quite satisfied with. Hoping to give you another account in a few weeks.

D. JENKINS.

Loanhead and District.

SIR,—I promised to send you the breeding results, and I herewith enclose them in order, as I called on them on Sunday. James Noble, Bonnyrigg, 4 Scotch Fancy and 7 Borders; A. and J. Thomson, Newton Grange, 50 Borders; John Noble, Easthouses, Dalkeith, 2 Scotch Fancy, 3 Norwich, and 27 Borders; James Carson, of the same place, 9 Scotch Fancy and 25 Borders; James Hamilton, Westfield, Dalkeith, 29 Borders; John Ewing, 19 Borders; Mr. Muir, 20 Borders; Alfred Rowe, 9 Scotch Fancy and 20 Borders; Thomas Briggs, 4 Scotch Fancy and 7 Borders, all of Westfield; Wm. McAdam, Broomieknowe, Lasswade, 2 Scotch Fancy, 17 Norwich Fancy, and 24 Borders; Wm. Nelson, Loanhead, 26 Borders; John Yule, Loanhead, 1 Scotch Fancy and 9 Borders; and my own is 6 Norwich and 40 Borders. Wishing our paper every success.

WALTER B. SMART (Loanhead).

REVIEWS OF SCHEDULES.

Wigan First Feather.—June 29th.—Judge, Mr. J. Trengove.—17 classes—Norwich, Yorks., Brit., Members, 3 each, Crests 2, Novice, Selling, and Gift, 1 each. Prizes, 10s., 5s., 3s. Entry fee, 1s. 6d. Entries close June 25th to Mr. W. Ridge, 55, Poolstock, Wigan.

L.P.O.S. First Feather.—June 20th.—Judge, Mr. T. Heath. 15 classes—Champion section, Norwich, 2, Yorks., 2, Crests, Cins., Mules, A.O.V., 1 each. Novice section, Nor., 2, Yorks., 2, Crests, Mules, A.O.V., 1 each. 3s. added to prize money, which is on the sliding scale, if more than 6 entries in a class. Entries close June 17th to Mr. H. Lambert Brown, 64, Manor Park, Lee, S.E.

Barnsley First Feather.—July 13th.—Judge, Mr. J. C. Barnes.—10 classes—Nor., 3, Yorks., 3, Mules, 1, Brit., 3. Entry fee 6d. Prizes on sliding scale. Secretary, Mr. T. Coward, 22, Blenheim Road, Barnsley.

Bradford (West) First Feather.—June 22nd.—Judge, Mr. H. W. Battyc.—16 classes—Yorks., 10, including two novice, Nor., 2, Mules, 1, Brit., 1, Sell., 2. Prizes, 8s., 4s., 2s., 1s. Entry fee 1s. Entries close June 19th to Mr. T. Clegg, 65, Lupton Street, Bradford.

Judge: C. A. HOUSE, Esq.
Prizes 8/-, 4/-, and 2/-. **Entrance Fee, One Shilling.**
Class 76, Norwich Plainhead, A.V.; 77, Yorkshire, any variety; 78, Canary, any variety bred 1907; 79, Goldfinch, Bullfinch, Linnet; 80, Any other variety Hardbill; 81, Any variety Softbill; 82, Any variety Cage Bird, 10 miles radius open to any person not having won a First prize at any open show; 83, Selling Class, 15/-.
Entries close 19th June, 1907.
Send on your Entries to F. H. CHAFER, 9, MARKET PLACE, DONCASTER.

Newmilns Show will be held on September 21st.

"Bird World" to hand. I am very pleased indeed with it in its new form.—H. ALLSOP, Abersychan.

The Ashington and Hirst Society have decided to hold their show on November 30th instead of December 28th.

Mr. W. G. Poole has been engaged to judge the cage birds at Evesham (Nov. 13th) and Brackley (Dec. 3rd.).

Kindly thank all who replied to my advertisement; too numerous to reply to all.—H. JAMES, Kirton Lindsey.

The judges at Kirkealdy, on November 9th, will be Messrs. D. Low (Scots), J. Patterson (Norwich and Borders), A. Cochrane (British and Foreign).

I shall not require further insertion of my advertisement. Results most satisfactory. I have returned ten cheques and postal orders.—W. M. MARSDEN, Hazel Grove.

Please thank all those who replied to my advertisement in CAGE BIRDS. I had over 20 replies, and find it impossible to answer all.—G. GONNARD, High Street, Stroud.

We are asked to state that the entry fee for the open classes at the forthcoming Battersea Young Bird Show, viz., 1s. 6d., was accidentally omitted from the schedule.

The judges for the City of Dundee Show are—Crests and Crestbred, Mr. A. Chalmers; Plainheads, Mr. J. Adams; Borders, Mr. J. Craig; Mules, British and Foreign, Mr. A. Cochrane.

Mr. Riley, the hon. sec. of the Southport C.B.S., informs us that the society's First Feather Show will be held on July 6th, and that the meeting called for June 20th is to discuss business in connection therewith.

Please accept my hearty congratulations on the "Bird World." It simply teems with splendid reading, and has indeed filled a long-felt want, and I wish it every possible success in future.—JOHN S. CRAWFORD, Glasgow.

Will you thank the 74 applicants for the grandfather clock I advertised. All sending a stamp I replied to myself. I have had letters and postcards from all parts of the country, showing over what a large area CAGE BIRDS is read.—JAMES MANN, 11, Commercial Road, Willington.

Mr. G. B. Reynolds, of 14, Johnson Street, Broomhall Road, Bank Lane, Pendlebury, writes that he is engaged in the formation of a Cage Bird Society. He already has the names of ten gentlemen who are willing to assist him, and will be pleased to hear from any others in the neighbourhood who would like to join such a society.

I shall be glad if the secretaries of any society who I have not written to respecting the meeting on the novice question, held at the "Napier," Holborn, on May 24th, and reported in last week's issue of this paper, will send their definitions of a novice and amateur to me.—J. W. RENNIE, the Royal Hotel, Mile End Road, E.

Every bird-keeper, who has not yet done so, should send a sixpenny postal order to this office at once. It will bring by return of post a copy of CAGE BIRDS ANNUAL. No one can possibly afford to be without it during either the breeding, moulting, or show seasons. Address, Manager, "C.B. Annual," 154, Fleet Street, London.

In our advertisement columns this week appears an announcement regarding the disposal of an established bird and live stock business. This business is situated in a most prosperous and flourishing neighbourhood, and is being relinquished owing to the unsatisfactory health of the senior partner. We shall be pleased to forward any letters from prospective buyers.

On June 8th the Rochdale O.S. club room was set apart for a gathering held under the auspices of the Lancashire C.A. and the Oldham and Rochdale Societies, to listen to a paper by Mr. Barrass, the present-day "father" of the Lancashire Fancy. The announcement brought forth the leading fanciers of the Lancashire variety, and we noticed amongst those present: Messrs. Nadin, Hardy, Steeple, Howarth, Myers, Adams, Heap, Ashworth, Eckersley, Whitworth, Lord, Law, Mills, Grindrod, J. Butterworth (secretary), and several others. The President of the club, Mr. Levi Butterworth, presided, and after a few well-chosen remarks anent the ability and qualification of Mr. Barrass to deal with the subject, called on Mr. Law (hon. sec. L.C.A.) to read the paper on behalf of Mr. Barrass.

Mr. W. James has removed to 150, Milton Court Road, New Cross.

Brackley Show will be held December 3rd.—W. G. POLLARN, Hon. Sec.

Mr. H. Norman has removed to The Eyrie, Salisbury Road, Carshalton.

Your paper is most interesting and enlightening.—P. RUSSELL, Southampton.

The judges for Whitehaven Show on November 15th and 16th are Messrs. Hadwin, Houlton, and Hopper.

Mr. A. Hirst is engaged to judge at Warrington on November 8th, and at Lurgan on December 13th and 14th.

Mr. J. Ferguson will judge at Dysart in place of Mr. McLay, who inadvertently had booked Falkirk and Dysart.

Mr. R. Rhodes will judge the First Feather Show of that old-established society, the Admiral Duncan, on July 6th.

Mr. W. Richinson, Secretary of the Atteriffe and District C.B.S., has removed to No. 1, Second Court, Brackley Street, Pitsmoor.

The breeding record I think will be most useful, and should have a good sale. Mr. J. Beswick, of Stockport, has been elected as an extra judge for our Open Show.—JAS. METCALFE, Hon. Sec. Bromley O.S.

That gifted writer and lover of all living things, the late Charles Kingsley, could, it is said, tell from the song of a Lark whether the bird had a nest, and whether the hen was sitting or had already hatched her eggs.

The following have been selected to judge the next Norwich Show:—Messrs. J. Robson, W. E. Greeves, W. W. Freestone, and A. Woollard. The show will be held under C.B.U. rules, and will take place on November 2nd and 4th.—R. ROLL, Sec.

At the last meeting of the Dulwich and Peckham C.B.S., when a paper was read by Mr. Cranfield on the Norwich Plainhead, hopes were expressed by the breeders present that the efforts being made by the N.P.C. and S.N.P.C. to get one universal type fixed would be successful.

Will members of the Spen Valley C.B.S. kindly note, writes Mr. Arthur Whitehead, the hon. sec., that my absence from the last meeting was due to a severe cold, which made it impossible for me to be there? I hope there will be as good an attendance on the next meeting night.

Dulwich and Peckham C.B.S. have fixed their Young Bird Show for July 4th, Judge, Mr. J. Robson, writes Mr. W. Hodson, the hon. sec. Mr. W. Gladwin is offering a silver teapot as special prize for best bird in the show, and Mr. J. B. Waterman a silver cruet for best bird bred and exhibited by a novice. We have also numerous other specials.

The accuracy (?) of the information given by some lay journals when touching on birds is well illustrated by the following extract:—One of the most easily tamed of British wild birds is the Bunting, or Reed Warbler (!) . . . A peculiarity about this bird is that, after six years of cage life, it is almost invariably attacked by the same disease—viz., atrophy, which proves fatal.

Re your letter notifying that my advertisement had expired. I am glad to tell you I am more than pleased with the results. I received a great number of letters, principally orders; but what impressed me most was the diverse classes of readers CAGE BIRDS must have. I must add though that I find your readers, on the whole, very good-class hobbyists, with whom it is a pleasure to correspond.—O. MILLSUM (Swindon).

The City of Hull C.B.S. have secured the Corn Exchange instead of the Oddfellows' Hall, for their annual show. The Corn Exchange is one of the finest halls for a cage bird show in the North of England, being exceptionally well lighted, and fitted with electric light and hot water heating apparatus. It is within five minutes' walk from the stations, being situated in the centre of the Market Place, so will be a lot handier for exhibitors visiting the show.—F. F. POTTER, Hon. Sec. City of Hull C.B.S.

"Better than ever." "Excels any I have seen." So write delighted purchasers of Ramsden's pure peppers. Amongst some hundreds the following well-known exhibitors have been supplied during the past few days:—Messrs. Bailey, 50 lbs.; Colton, 150; Crisp, 15; Dewar, 150; Dibb, 200; Dutton, 200; Eckersley, 25; Gilbert, 150; Helliwell, 90; Easterling, 80; Mundell, 100; Mallinson, 44; Robson, 56; Shackleton, 75; Trengove, 50; Taylor, 100; Norwich Clubs, 350 lbs., etc. Original orders can be seen. There is no room for doubt about Ramsden's Peppers. They are sold and guaranteed under the Merchandise Act, also the Food and Drug Adulteration Act. No other vendor of colour foods advertises such a guarantee as this. Pure, absolutely pure, and the best the world produces. When buying pepper, don't be persuaded that any other pepper (probably giving much more profit to the dealer offering it) is just as good as Ramsden's; it isn't.—ADVT.

Your "Breeding Room Register" is the best book I have ever seen for a fancier who wishes to know the result of his hobby.—J. GILBERT, Coventry.

Mr. J. F. Dewar (Edinburgh) will judge Scotch and Border Fancies, and Mr. Thos. Knight Norwich and British, at the Annual Show of the Leith O.S. on October 26th next, writes Mr. George Brown, the Secretary.

Owing to the extended radius and increased membership of the Crewe and District Ornithological Society, Mr. J. C. Heaton, of 27, Minshull New Road, Crewe, has, we hear, been elected to assist Mr. A. Wilkinson as joint hon. sec.

At our last meeting Mr. Trower gave a very interesting lecture on seeds, and showed by various samples the difference between good and bad seeds. The lecture was very instructive, and was much appreciated by the members.—J. DEWHURST, Sec. West London F.A.

I am very much indebted to you and your artist for the lifelike portrait of my yellow Green cock on the front page of your valuable paper last week. He was exhibited three times during the season:—third at Maesteg, first Llanelly, and second Crystal Palace. I must also thank you for the lovely portrait of my buff hen in CAGE BIRDS ANNUAL. She was first Dulwich, first Swansea, second Morecambe, and first Crystal Palace. She is one of ten youngsters, from two sister hens and my buff cock, winner 13 firsts, two seconds, and third, and one vhc. I may say that nine out of the ten won in good company.—D. JENKINS (Swansea).

OBITUARY.

Mrs. SIMMS (Sutton-in-Ashfield).

It is with profound regret that I announce the death of Mrs. Simms, the beloved wife of Mr. W. Simms, who has been failing in health for some time. She returned from Skegness, where she had been for the benefit of her health, a few days before her death, which came quite unexpectedly on May 31st, and her remains now lie in the quiet cemetery at Sutton-in-Ashfield. She was a keen fancier, and took great pride in her husband's birds. She leaves a husband and five children to mourn her loss. Mr. Simms has had some ill luck of late. He was stricken with an illness himself some weeks ago, and since he recovered one of his daughters has had to undergo an operation, from which, I am pleased to say, she is going on well; and now comes the death of his wife. I am sure that all fanciers who know Mr. Simms will sympathise with him.—JOSEPH SMITH, Sec., Sutton-in-Ashfield and District O.S.

Professor ALFRED NEWTON.

It is with deep regret we have to record the passing of that distinguished ornithologist and man of science, Professor Alfred Newton, who died on June 7th last, at the ripe age of 78 years. At Cambridge University he had held, since its foundation, in 1866, the chair of zoology and comparative anatomy. He was also President of the Cambridge Philosophical Society and as Travelling Fellow of Magdalen College he made several tours, which included Lapland, Iceland, the West Indies, and North America, and added much new knowledge to the science to which he was devoted. All his life Professor Newton was especially interested in legislation connected with the protection of birds. He brought the subject before the British Association in 1868, and for several years was Chairman of the Close Time Association, during which period were passed the first three Acts of Parliament for the protection of birds. His colossal "Dictionary of Birds" will stand for all time as a monument of industry, knowledge, and love bestowed upon the feathered creation.

National B.B. and M.C.

Will secretaries, when making application for our support, kindly give number of classes, date, and names of judges? By doing so they will save much time and needless correspondence.—PLUMBRIDGE and CARR, Hon. Secs.

A Novel Special.

Much pleasure and some smiles were evoked by a special prize Mr. J. W. Ramsden offered to present to the Southern Yorkshire C.C., at the recent annual general meeting. It took the form of a valuable tea service to be given to the lady who looked after the birds of the member scoring most points at S.Y.C.C. competitions. The donor said he knew that in many cases it was the gentler sex that did what he might be pardoned for terming the "donkey work" in connection with a fancier's bird room, and he thought the efforts of the ladies deserved recognition in some way. The offer was accepted with acclamation.

Leigh and Dis. C.B.S.

Mr. A. Parks, 19, Cambridge Street, Atherton, Hon. Sec. Leigh and District C.B.S., writes:—I appeal through your valuable paper to our members to take more interest in the society's doings. Meeting after meeting only a few members are present. Some meeting nights we have to return home again through members not turning up; thus we have to postpone business for another meeting night. Now, I cannot see why this state of things should exist. Most of our members reside near the club quarters, the club-room being one of the most decent and comfortable of hotels in the town. It is too late to grumble about things a few days from show time. I hope this appeal will reach all members concerned. And I also hope they will in future rally round at each meeting night and make our meetings worthy of the Fancy. Men that love feathers ought to flock together. Our society from the begining has been, and is now, in a very prosperous way financially.

STRAY NOTES ABOUT BIRDS.

By Claude St. John.

SHOULD PARROTS HAVE WATER?

It is strange how this old perennial still lives, or how it ever managed to get so widely and firmly believed that these birds never drank water. Many of the commoner varieties, especially during the cold weather, drink very little, and it is quite easy to understand how Parrots fed according to the old notion on sops and moist food could eke out an existence for years without any other form of water. But we want all our birds to live and be happy, not merely exist, and a properly fed Parrot can be neither if it is kept without water. Not infrequently it will acquire the disgusting habit of sucking up the moisture from its own droppings, and may learn sometime or other that it can get moisture by sucking the quills of its growing feathers. By all means let every Parrot have water to drink, but if it has been kept without it a long time give it cautiously at first; offer it a drink morning and evening, but if it is found that the bird does not slop it about the cage or soak its food in it leave it on the cage regularly.

HAND-REARING YOUNG BIRDS.

A little skill in rearing the young of birds by hand is often of great value to the bird breeder. Well bred youngsters are not infrequently lost from starvation that might have been saved and grown up into valuable specimens if their owners had only possessed some skill in artificially feeding them for a time. Apart altogether from our yellow-coated friends, with such tantalising examples as non-feeding hens and the lack of available feeders, think of the fabulous gems of Hybrids which one might hope to save from an early passage into eternal obscurity. Every bird breeder, and Hybrid breeder in particular, should lose no opportunity to practice hand-feeding until they are expert in the art. For there is some art in hand-feeding, as it requires quite a combination of good qualities to satisfy the cravings of a hungry and active brood when a few days old, with their tiny beaks gaping wide open and their heads bobbing about in such an exasperating manner that it requires a deft hand, a sharp eye, and quick judgment to satisfy them all without a slip, or dropping the food about their little bodies. If the birds are very young, making the food into quite a moist paste and giving it by means of a small glass syringe is a great improvement on the old wooden spatula style. Also when the chicks are so young it is not a good plan to give the food cold—it should be at least lukewarm—and the syringe method enables one to accomplish this end by holding the end of the tube in warm water for a minute or two before feeding. The great point to bear in mind is that by this method there is more danger of the food becoming sour. This must be strictly guarded against by making only enough food for two or three hourly meals and keeping the syringe scrupulously clean. Feed at least every hour from early morn till dusk after the young are a week old; if under that age it is better to give a smaller quantity, proportionately, every half-hour.

USEFUL HEN MULES.

Unless they are of some rare variety, or of superlative quality, hen mules are usually of very trifling value. But writing of the absence of feeders, when their services would be most valuable, reminds one that many hen Mules, even those of most insignificant value, may often be turned to good account by being employed as feeders. In this capacity they are often very useful, and, unlike pure bred birds, it is not always essential for them to be nesting on their own account. Indeed, in many cases the mere sight of a nest of young in the cage is sufficient to incite a hen Mule to endeavour to feed them, and if the young respond to her desire she will often make a model foster parent. It is, therefore, always worth the trouble of trying the experiment when one has a hen Mule and a brood of deserted young, with no proper feeders to take charge of them.

MULES NESTING.

Readers of the above note about the non-necessity of hen Mules being nesting on their own account must not take the remark as evidence in favour of the old notion that Mules will breed. Such an idea is altogether repudiated. Yet it is surprising how much vitality the error still possesses, in spite of persistent efforts to kill it outright; hence the disclaimer to prevent a possible revival of an erroneous idea. So far as our cage birds are concerned, it may be generally accepted as a fact that Mules will not breed. There is no tittle of proof to the contrary. A fine field of new ground for experimentation undoubtedly exists in this branch of aviculture to one who tackles it systematically.

DON'T.

This sage advice has become almost proverbial in many phases of life. One of the most important don'ts for the young bird breeder at this season is: Don't be in too great a hurry to remove the young entirely away from their parents. Young birds which appear to be feeding themselves very freely are often still dependent to a certain extent upon their parents, and when taken quite away from them are apt to lose ground, or even prove quite incapable of doing for themselves entirely. In such cases it may become necessary to return the young to their parents' society for a time, and if the latter have in the interval become estranged from the young there is a certain amount of risk of the young being maltreated. So long as the parents treat the young kindly one need be in no great hurry to remove them. It is far better to keep them together a few days too long than run the risk of removing them before they can quite look after themselves, and thus probably cause a temporary check in the growth. A little careful observation after the young are removed will soon show whether things are going on with them as they should. They should retain their spirits and a smooth, neat plumage. If they soon begin to look thick and puffed out it is generally significant of trouble to come in the immediate future.

A PEDESTRIAN PARROT.

By F. Finn, B.A., F.Z.S.

There has recently reached England a specimen of one of the rarest and most remarkable of the Parrots, the Kakapo, or Night Parrot, of New Zealand (*Stringops habroptilus*). It is a bird about equalling the Sulphur-crested Cockatoo in size, but with short wings and comparatively long legs. Its plumage is very remarkable. Imagine that of a hen Pheasant dyed a bright green, but retaining its mottled character, and you will have a good idea of it; and it may be added that in texture the plumage appears more like that of a Game-bird than a Parrot. The sexes are alike in general colour, but the male is brighter and yellower, and is also a larger and heavier bird, and has a great tendency to get fat.

A DWELLER IN CAVES.

The Owl-Parrot, as this bird is sometimes called, from the bristly feathering of the face, which much resembles what is seen in an Owl, lives in the mountains of New Zealand, and only comes out at night, spending the day under vegetation, or in mossy holes and dens at the roots of trees. Although a ground-living bird, it retains the perching habit, and sits on a root or any similar perch. It walks and runs well for a Parrot, but is quite unable to fly; and when it climbs into a bush or tree, which it often does to procure food, it only drops or flutters out if compelled to leave it suddenly. The said food consists not only of berries, but of grass and other herbage and furze; in fact, the bird lives much the same sort of life as a rabbit.

NESTING-HABITS.

Kakapos appear to breed only once in two years; they do not usually associate even with their mates, being, unlike most Parrots, very solitary birds. The male has a loud, booming call, audible for a very great distance; the hen's note is described as a cough, and she, no doubt, is attracted to her admirer by his resonant voice. He apparently leaves her to look after the eggs, which are laid in the den by herself, and she also brings up the two or three young, which are clothed at first in white down. The rearing must be a hard task for one bird, and this a walker, not a flyer, and it is not surprising to hear that the mother becomes very thin; this may account for the long non-breeding period. Young birds appear to be considerably persecuted by their elders.

Fairly Tall!

At the Chapel of St. Peter, in Florence, according to a certain weekly paper, there is a choir of birds, the only one of its kind in existence. The birds—300 in number—are all in separate cages, which are arranged in rows on both sides of the altar. The leader is a girl, who has had the birds under her own personal training for over two years. The whole of the musical part of the service is most exquisitely rendered by them. The leader starts each hymn by whistling the first few notes, and then the birds take it up, in obedience to the movement of their instructor's hand.

A Desire for Culture.

A couple of House Martins have almost completed building their nest on a gas pipe of the Hailsham Council Girls' School (Sussex). The pipe runs along the middle of the roof, and from the centre hangs a gas pendant. It is this point that has been chosen as the side for their nest. The birds find their way in by means of a window high up on the north wall, and in spite of the room being full of scholars, the couple proceed undeterred to furnish their home. During the progress of the singing lessons they will perch on the window frame and join in the choruses, and continue to chirrup for some time after the conclusion of the lesson.

Consult the "ANNUAL" when in doubt.

THE CANARY BREEDING SEASON

Is now in full swing, and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries:—

House's Canary Manual

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL."

The following Summary of Chapters, etc., will show you how completely the ground is covered —

Aviaries and Cages.	The Young Birds.	Young Birds Dead in Shell.	Exhibiting.
Show Cages.	Food for Nestlings.	Red Mite.	Diseases treated very fully.
Perches.	Hens Refusing to Feed.	Clear Eggs.	Every variety of Canary is treated
Breeding Canaries.	Sweating Hens.	Moulting.	upon at length and illustrated

MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

ILLUSTRATED IDEAS

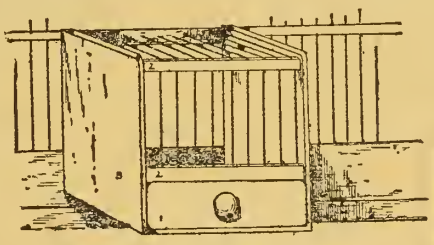
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 109.

AN OUTSIDE EGG FEEDER.

Sent by E. Johnson, 10, Pemberton Street, Hendon, Sunderland.

Enclosed is a sketch of an egg-drawer holder, made to hook on the cage door with two pieces of cage wire, bent to the required shape. It does away with cutting a



1. Earthenware Egg Drawer.
2. Wired Cross-bars.
3. Solid Wood End.

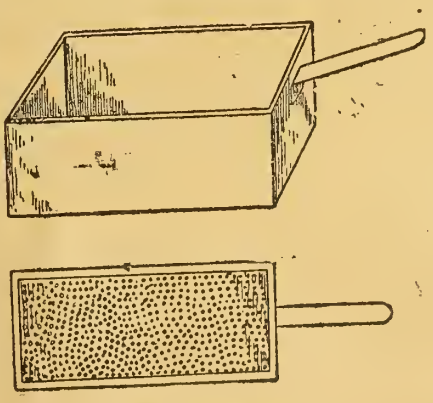
hole in the rail of the cage front, and obviates the spoiling of the look of the cage when the egg-drawer is not needed and not in use. It likewise prevents the birds from fouling the food, as the latter is outside the cage. From the drawing readers will readily see what is needed to make this egg-drawer holder.—E. Johnson.

No. 110.

A SIMPLE SIEVE.

Sent by H. Potts, 3, Alexandria Street, Aberavon, Port Talbot.

Enclosed is a sketch of a simple sieve which I find very useful for either straining off the water when soaking seeds for young birds or for use when crushing oyster shell. I



A Simple Sieve.

first crush the shell and then shake it in the sieve in the usual way. It is easily made by taking two pieces of wood, 6 in. by 2 in., and two pieces 3 in. by 2 in. They are nailed together, and a piece of gauze is tacked on the bottom. The handle is then fixed, when the sieve is ready for use.—H. Potts.

HAVE YOU SEEN "THE STOCK BOOK"? It will surprise and please you.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Barnsley and Dis. C.B.S.—June 15th, at Maltsters' Rest, 8. Show business.—T. Coward, sec.

Bath and Dis. F.A.—June 20th, at the Foresters' Hall, 8. Committee at 7.—H. Tartle, hon. sec.

Birkenhead C.F.A.—June 18th, at Temperance Hall, 8 p.m. Discussion on "Yorkshire" and syllabus for 1907 and 1908.—J. T. Harding, sec.

Cardiff C.B.S.—June 20th, at Maskell's. Second Nest Feather Show arrangements, etc.—W. Sampson, sec.

Coventry O.S.—June 19th, at Sydenham Palace, 8.30. Arrangements for Nest Feather Show.—G. Turrell, sec.

Crewe and Dis. O.S.—June 18th, at Nag's Head, 7.30. Table Show of Goldfinches, Linnets, Redpolls, Siskins, and Twites.—J. C. Heaton, joint hon. sec.

Witney and Dis. C.B.S.—June 15th. Show; birds to be staged at 3; judge, Mr. C. Stebbings.—E. W. Johnson, sec.

The Zoological Gardens.

The latest guide to the Zoological Gardens, Regent's Park, London, N.W., reaches us from the Secretary, and is a very admirably produced hand-book, lavishly illustrated with excellent photographs of many of the inmates, and full of useful, if necessarily brief, information concerning them. The various birds housed in the Gardens occupy a considerable portion of the space, and readers of "C. B." who would like to know the latest arrangements, etc., made at the Zoo on their behalf will, no doubt, be able to get a copy through the post by forwarding 7d., price and postage, that is. A series of 12 very effective coloured post-cards have also been issued by the Zoo authorities.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons—**J. North.** Miscell.—**"Old Judge."** Border Fancies—**J. Cobb.** Rollers—**"Schoolmaster."** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c. Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S., M.B.O.U., &c. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Lumpy and Wheezy.

T. W. Burton.—I fancy your birds have some broncbial trouble. Give them, in tbeir drinking water, ten drops of glycerine, ten drops of ipecacuanha wine, and six drops of paregoric. Let them have this fresh daily for a fortnight, and, if they are not better by then, write again, and I will advise you further if you think their livers are affected.

Young Dying.

Grocer.—I am of opinion that the cause of the two nests of young dying at the age of two and three days was due to the fact that the hen did not feed them. I should recommend you to let the cock stop with her next time. Your feeding seems all right. No, I do not think the fact of the cock being run with three hens would lessen the stamina of the young to any appreciable extent, but a lot would depend upon the vigour of tbe bird.

YORKSHIRES.

Answered by H. W. BATTYE.

Trouble with Young.

Determined.—Your hen appears to be one of those that some call scamp hens, one of those that will do no way right. Have you noticed what condition her claws are in, as you say you found one of her young ones dead in her claws the second morning after she hatched? Examine her claws, and if long and bent, cut them shorter with a sharp pair of scissors, holding them up before a strong light so that you will be able to see the thin red line that runs down the claws; don't cut too closely to this or you will make it bleed. Perhaps tbe accident of one young one getting fast in her claws may have upset the hen and caused her to become too anxious about the others until she neglected to feed them properly.

Like a Ball.

Manxman.—Perhaps your Yorkshire hen is placed in a draught, and tbis may be one reason why it perches like a ball. Or it may be only its habitual way of roosting at night; most birds perch like a ball at night, and we used to say years ago if they were perched on one leg only they were all right. You do not give any particulars as to whether it is healthy or ill in appearance during the daytime. Have you now, or have you had the hen paired up? If you will write and give particulars, I will try and advise you. The seed you mention is a capital mixture, but I should advise plain white canary seed in the hoppers as a staple diet, and a teaspoonful of the mixture three times a week, given separately. Clean water daily, into which mix four drops of Parrish's Chemical Food twice a week, and give a supply of sharp gritty sand once a week.

Lack of Condition.

Upton Park.—I am afraid your birds have never been in proper breeding condition, and if they have, they seem to have gone off. An ordinary living room is a very unsuitable place to keep birds for breeding purposes; as a rule the temperature varies too much, and to get and keep birds in condition for breeding they require a more generous diet than canary seed. If you could place them in a room without a fire, and give them a little egg food and maw seed daily, they might get round in time to have one nest, but they would probably be rather late. I should not recommend you to buy hens for the other cocks that you say seem lively enough but do not sing, as when a cock bird is not in song at this time of the year it is very seldom any use trying to breed with him, and you would probably get no fertile eggs from him.

Lung Trouble.

W. F. Arch.—You might ask some good chemist to mix you a small quantity of the following:—equal parts syrup of squills, ipecacuanha wine, and glycerine, and give 12 drops daily in its drinking water; try this for a fortnight, when I think you will find an improvement. And, as you say though he wheezes it does not affect his singing, you might try him to breed, and very probably he will fertilise his eggs all right. At the same time, I don't approve of breeding with birds that are affected with lung trouble.

Wrong in its Legs.

A Reader of Cage Birds.—You have two young birds six weeks old, one as lively as can he, the other one sits on the bottom of the cage all day, seems well enough, but cannot stand on its legs, Have you examined its feet and legs? Perhaps it is deformed in some way, or perhaps it is weakness, which it may get over when a little older. Young birds should have egg food oftener than twice a week up to six weeks old. Try giving this bird a little egg food every day, say a teaspoonful, and well mix with it six drops of Parrish's Chemical Food, and just a sprinkling of maw seed over it. This will very likely put it right in about two weeks—that is, supposing it to be all right in its legs and feet.

Lump under Eye.

A. Brown.—You say the young one with the lump under its eye is only two weeks old, and that you have tried tincture of iodine, but it does not touch it. This I can well believe, because it has not had sufficient time up to now— that is, in case it would cure it, as it will take a considerable time to reduce it. Try it for a few weeks, and if it has not done any good by then, I should be inclined to destroy it, as to cut it away would very likely kill it, and I don't know of anything better than painting it daily with the tincture—but it's a slow process.

BORDERS.

Answered by J. PATTERSON.

Young Humpy.

T. W. Burton.—I scarcely think there is anything seriously wrong with your young birds. It is quite a regular thing for young birds at this age (six weeks old) to have a feed and then go to sleep resting their bodies on the perch, and unless you see other symptoms such as derangement of the bowels or listlessness, just let them alone, and they will move about freer when once they are older. Should their bowels be relaxed or their abdomen be red and swollen, let them have as much Tibb's Quinella as will lie on a three-penny piece dissolved in boiling water; let stand until cool, and give instead of water until they are looking better. Dust as much powdered chalk over their egg food, every night, as you would of pepper on your own food. You need not be surprised that they do not eat any seed at this age. Follow instructions to "Sammy" in this issue. (2) You must study for yourself whether your hen that wheezes is really colded, or if she does not do so from pure nervousness. If the latter, don't disturb her any more than you can help, and add three drops of chemical food to her egg food every night. But if colded, take 1 oz. each of whisky, glycerine, and syrup of squills; put all together in a bottle, shake well, and give ten drops in drinking water every other day. (3) See also reply to "Sammy"; but should young birds be out of sorts, no green food until they are through the moult. Let them have half a teaspoonful of scalded rape (German) instead, twice weekly. Your other treatment might be improved with a third of German summer rape seed every other day. See that your egg food and hemp seed are given fresh, and no old rancid food thrown out left for your young birds to pick at; they are like children, they will try anything.

Cock Bird Bald.

G. G. Hay.—I am pleased to see that your bird is now in perfect health, and that you have followed my instructions so closely. I doubt if there is any chance of feathers growing on his head now. In about six weeks time he should be going into moult, and the feathers will grow all right then. However, if he is not paired up to a hen you might try anointing his bare place with the following:—1 oz. lard; put a small cork into the fire, let burn a minute, take out the ashes on shovel, until it is all burnt to powder; mix this with the lard, and use every morning. This is very disfiguring, and you must take care not to let it touch any of the feathers, but I have found it very beneficial.

Treatment Various.

Sammy.—Feed your old birds while feeding young on egg food—one boiled egg to three Osborne biscuits—let them have this freshly made thrice a day, to the last feed at night add half a teaspoonful to each pair. Give twice a week one teaspoonful scalded rape seed in the morning. Undoubtedly lettuce is now the best green food, give a little twice a day. You may vary it now and again with a few dandelion heads; pull them when they are closed up after the bloom has gone from them, just before they open up again, and when their white heads are ready to blow. (2) Let the young remain with their parents till they are 30 days old. They should then be able to do for themselves. You can now mix a little crushed hemp seed in the egg. Gradually withdraw the egg food from them when they are between six and seven weeks old, till at eight weeks they should only get half a teaspoonful daily. Crush a little canary seed for them, till you can see them crack the whole seed. (3) Don't give much green food after they leave their parents; a little thrice a week is sufficient. You should carefully look over your stock and select your hest; either run them into single cages or moult them out in threes in an ordinary breeder.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Turned Claw.

Canary three weeks old, seems weak on legs, has a back toe turned under front ones. Shall I use a little rubber tubing? Please say how to hold bird; I am afraid of breaking the toe. How old must they be before I may give them a bath, as it tries to go in same time as its mother? Is it too soon to put young one behind the wire division and put male bird back to hen?—A WOMAN.

A Woman.—You need not worry because a bird three weeks old does not stand up well on its legs. They are not strong enough yet to support the body properly, and hence the reason why the bird, when tired, rests on its stomach. Yes, you should slip a piece of rubber tubing over the claw and bring it back to the leg. As it seems stiff, soak it for a few minutes in warm water, not hot, about blood heat is the correct temperature. After the soaking move the claw to and fro gently for a little while, and then I think you will be able to get the tubing over it all right. Hold the bird firmly in left hand with the neck resting between the thumb and forefinger. Work the joints of the affected foot with the right hand. You can let your young birds bathe as soon as they wish to; they will not bathe unless they feel an inclination. It is not too soon to put the young ones behind the wire division, but there is no need to do so unless either of the old birds molest them. If, when returning the cock bird, you hang up a fresh nest bag for the hen to draw material from with which to line her nest she is not likely to interfere with the young, but should she do so, then I should advise you to separate them at once.

Sweating Hens.

A.J.—You should remove the cock bird. This throws on the hen the whole responsibility of feeding the young, and keeps her off the nest in some measure. Add daily a pinch of sea salt to the bathing water. Feed as frequently as possible, giving choice tit-bits of green food, and thus inducing the hen to leave the nest. You might also put a thin piece of wood across the nest from side to side, just over the heads of the young, so as to prevent the hen settling down too close on them.

Soft Moult.

J. Furber.—If your bird is commencing to moult now, I should not consider it a false or soft moult. It is full early, but it is not unusual for birds to commence dropping their feathers towards the end of June. Keep your bird free from all draught, feed generously, using egg food and a varied seed diet. Keep the hopper full of the best Spanish canary seed, and every day give half a teaspoonful of German summer rape, twice a week give a pinch or two of maw seed. Let it have green food daily, and hang a piece of cuttlefish bone in its cage for it to peck at. Your Foreign bird query will be sent on to Mr. Page, who will doubtless attend to it. Queries on different subjects should not be written on the same sheet of paper.

Returning Cock Bird.

J. H. Pestridge.—Your letter, unfortunately, was mislaid, which I much regret. The cock bird may be returned to the hen when the young are a few days old, and most certainly whilst they are in the nest. It is not at all unusual for a very heavily marked, or even a green bird to come in a nest of clear or lightly ticked birds. By now you will have discovered that what looked like a black Canary in the nest is really a green. I regret I cannot tell you where the Birmingham Show is to be held, but if you write to the Secretary of the Birmingham C.B.S., Mr. H. C. Wilkins, 7, St. Martin's-lane, Birmingham, he will, no doubt, gladly tell you.

Poor Layers.

Winstone.—It is really almost impossible to say why your birds have only laid one egg a nest, but the probable cause is that the hens are not strong in their generative organs, and are in a state approaching barrenness. As you know, in all classes of animal life some females are more less non-productive, so it is in Canaries. It is quite possible your hens are either too old, or else, if young ones, they were not sufficiently matured when you commenced breeding with them, and this has upset them for the whole season. It is too late now to remedy things for this season, and the best thing you can do is to let the hens have plenty of exercise from now to next spring, and wish for better luck next year. Your feeding and treatment are quite correct; you cannot do more.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Management of Linnets and Goldfinches.

Please let me know through your valuable paper the diet for Linnets and Goldfinches, caged for singing purposes; also diet when moulting; also most suitable cages for both kinds. I now keep them in back cages.—A.B.

A.B.—A good stock mixture for Linnets now would be: Canary and teazle one pint each, summer rape and charlock half-pint each, linseed a quarter-pint. For Goldfinches: Teazle and hemp one pint each, canary half-a-pint, linseed a quarter-pint. Linnets should have a feed of maw seed frequently, hemp seed once or twice a week, and often they like one or two cracked sunflower seeds occasionally. Goldfinches should have a feed of maw and niger seeds frequently, and often they also are very fond of sunflower. Linnets like seeding shepherd's purse and chickweed passionately, and need them liberally when moulting, with ripe plantain in addition. Goldfinches like groundsel tops and dandelion heads and young leaves passionately, also thistle heads, hard-heads, teazle heads, etc., while moulting. They should then have linseed freely, while Linnets should then have a half-part each of linseed and hemp in their stock mixture. The best cages for general use are the box-pattern ones known as Finch stock-cages (any of the large cage makers advertising in our columns will supply them). They are about 16 by 10 by 8 inches, wired in front only, doors at front and side, seed box inside, running from front to back, two perches about on a level with top of seed trough, water vessel outside. In CAGE BIRDS ANNUAL for 1906 this style of cage is depicted and described. Back cages are only useful for occasional use and for special purposes.

Breeding Goldfinches in Cages.

Have Goldfinches been known to breed in a breeding cage? I have two paired. The hen made a nest and laid five eggs. I know they are properly paired. When the hen laid her fourth egg she sat day and night, but after she laid her fifth egg she would only set at day time. I gave a Canary the Goldfinch's eggs, and the Goldfinch the Canary eggs But the Canary eggs are five days older; would the Canary set five days longer?—M. C. DELANGE.

M. C. Delange.—Goldfinches have certainly been known to breed when confined in a cage; the circumstance is uncommon, however, under the usual conditions. It sounds nice and very desirable, let us say, to attempt to establish a cage-bred strain of Goldfinches. No doubt it could be done with the exercise of judgment and great perseverance; the difficulties are sure to be great, though. Your own hen Goldfinch, for instance, behaved exactly as only too many other hen British birds behave when breeding in captivity. Some lay but will not build; others build and lay, but will not sit; others sit for a time, then seem to get tired of that pastime; others hatch out the young, then seem to think they ought to thrive without being fed. What is the reason of all this thusness, so to speak, it would puzzle the proverbial Philadelphian lawyer to explain. You did quite right in transferring the Goldie's eggs to the hen Canary, though it is a pity the latter will have to sit five days over her time to hatch them. Of course, if unfertile, there will be no object in letting her do this, so you should test the eggs after she has sat on them seven days. Whether she will "stick it" for this extended period only time can prove; there is certainly a chance. I remember a fancier friend telling me he got so annoyed with a hen of his for persistently squatting on her young, that he gave her some unfertile eggs to have her "sitting bit" out on. But he was tired first. She seemed to have made up her mind to incubate them till the following season came round.

To Breed Mealworms.

Can you tell me a good method how to breed mealworms?—T.M.S.

T.M.S.—I have often explained how to breed mealworms. Briefly, the process is as follows:—A large tin (a long one is better than a deep one) is filled three-parts full with alternate layers of coarse sacking (cut in pieces to fit—once folded is best) and bran. Holes are bored with a brad-awl (for ventilation) at the top, right round the tin—two rows, if possible. A pint, or quart, of mealworms should be turned into it, regulating the quantity by the depth of your own pocket. If you can get a supply of beetles with the worms, it facilitates the proper stocking of the tin. The receptacle must be kept in a warm spot (especially during cold weather), this being one of the secrets of success. Some people put bones, dead birds, meat, etc. in their mealworm boxes. I never do so myself, as the boxes become somewhat offensive then, and the worms grow very large and coarse—repulsive to any bird smaller than a Thrush or a Jay. A handful of very finely crushed dog biscuit can now and again be placed under the top layer of sacking (always manage to have a piece at top of the tin). The supply of bran should also be renewed from time to time. Disturb the mealworms as little as possible, however, for from nine to twelve months. It is a slow process, starting a mealworm box.

"Casting the Shin-Bone."

G.H.B.—"Casting of the shin-bone" reads like being an uncommonly interesting performance for any bird to indulge in, but, unfortunately, I am afraid it is all nonsense. The supposed "shin-bone" is merely the old thickened "scale" on the surface of the lower part of the leg, which needs removing (or is, at least, best removed) when it gets unduly pronounced, or causes a bird palpable inconvenience. Many birds become quite a painful sight owing to their badly scaled legs. The scale is not usually difficult to get off, especially to anyone used to handling birds. Most fanciers soak the part for a time in nicely warm water, then remove it with the sharp point of a pen-knife blade. Personally, I prefer to use warmed oil in place of water. Place some salad (or olive) oil in a tea-cup, or egg-cup, according to size of bird, and stand it in another vessel containing boiling water until heated to the right degree. Soak the bird's legs in this. After this operation is over, anoint the parts gently with Zam-Buk ointment, or a little Friar's Balsam.

Concerning Young Birds.

Blackcap.—(1) Young birds taken from the nest at nine days old do not sing the song of their parents to anything like the same perfection as specimens of the species caught adult. They will pick up notes and phrases from the songs of almost any birds they hear singing, which they render, of course, in their own particular style, giving a kind of musical medley. (2) The moult begins any time after the end of June, though from the middle to the end of July is the more usual period, very many birds, however, not commencing until August has well turned. There is neither fixed rule nor date in the matter. Early hatched young birds invariably drop into moult before late hatched ones. (3) The sexes of young Nightingales cannot be distinguished with certainty; you can only go for the boldest looking youngster, with the longest, flattest bead when viewed in profile. Young Blackcaps are extremely difficult to sex, too. You can only go for the densest coloured youngster possessing the other characteristics just mentioned. If you extract a feather or two from the crown of the head, they will, in the cock bird, grow again black, whereas in the hen they will come brown again. It is useless asking how to sex the young of almost all species, for sexual distinctions in the plumage (where such exist) only became marked after the moult; in their nest feathers cocks and hens are alike.

Pairing a Bullfinch Hen.

Cracko.—I am afraid you will have to solve the puzzle yourself as to which cock bird you pair the hen Bullie up with. It would be very nice to breed some fine young Bullies from her and the Siberian cock Bullfinch she is now mated to. But I must tell you that it is doubtful whether you will succeed in getting fertile eggs, especially so seeing they are in a cage—records of Bullfinches successfully breeding in a cage are few and far between. You could let them try for one nest. If the hen Bullie shows no desire to incubate the eggs, you would have to transfer them to a hen Canary. The young Bullies would have no particular monetary value, assuming you succeeded in getting them. If you paired her with the Norwich cock Canary, bowever, and they produced Hybrids, you would then have something of considerable monetary value, providing they were nice specimens of their kind. If the hen Bullie sat out her time (many of them will often do so), the cock Canary would doubtless help you over the feeding difficulty. The hen Bullie, however, may not appreciate the change of mate, but may "go for" the cock Canary when you introduce him to her. I advise you to take the cock Bullfinch right out of the room away from her, and to hang the Canary on the front of her cage for a few days before turning them together. Hen Bullies can be difficult creatures when they like, and not a little vicious. Give them a liberal supply of seeding shepherd's purse and chickweed (especially should there be young), also any dandelion heads and young leaves you can get. Continue the egg food, of course. You should give soaked rape seed (just sprouting), also lightly cracked hemp and sunflower seeds, and maw seed liberally. Sprays of foliage off fruit trees and bushes or rose bushes, which are covered with green-fly (*aphides*) will also prove very helpful when young are being reared. No doubt the hen will also eat a few small mealworms; while a few best quality ants' eggs can be stirred in amongst the egg food.

A Nest and Eggs.

Amateur.—Very many British birds love to nest "in the very centre of a holly or thorn bush" (these are not the same, by-the-bye). I could not pretend to say to what species the nest belongs with only the meagre particulars you set out to guide me. A Greenfinch's eggs might be described as "whitish colour and reddish markings," and possibly it is the home of this bird. You want to tell me the size of the nest, what it is built of, and particularly the size of the eggs. Then, no

doubt, I could help you. But why not watch and see the bird that visits it? That would settle the matter beyond all question. Goldfinches are fond of nesting in orchards—among pear, plum, and apple trees—but they also build in beech, oak, and other coniferous trees, and occasionally in thorn bushes and evergreen shrubs. The nest is cup-shaped, and a masterpiece of deft workmanship. Moss and lichens, etc., are used externally, and hair and downy feathers, etc., internally. The eggs are usually four or five in number, pale bluish-white in ground colour, spotted, and often streaked, with greyish-red and reddish-brown. The amount of marking varies. The eggs cannot be distinguished from those of the Siskin; and from those of the Greenfinch and Linnet practically only by their smaller size. The nest and its situation, of course, affords a guide to identification. The call-notes and song of the parent birds, too, cannot well be mistaken for those of any other species.

Hand-rearing Finches.

E.M.—Yes; you should follow the directions I gave in No. 279. No one can expect to be successful with every bird he tries to hand-rear, but a large proportion should certainly survive. Finches should have a little soaked (just sprouting) summer rape seed mixed among their soft food from the day they are taken (nine or ten days old). This can be increased from day to day until a good proportion is present. Of course, being more or less moist, the more soaked rape one uses the less the food wants moistening with milk (or water). As the birds get older it should not be given so "sloppy" as at first. Don't forget to mix in every two days or so a small quantity (say a tiny saltspoonful) of crushed cuttlefish, or very small particles of grit. I always think the young birds seem to feel the cold, during inclement weather, when they commence to roost outside the nest, and at this period they should be kept very cosy (especially at night), their cage covered with a warm cloth, and stood in a warmed room when possible. It is the large birds which seem most susceptible to attacks of cramp. It is a very good plan, however, to lightly colour the drinking water with Parrish's Chemical Food—I generally use Fellow's Syrup of Hypophosphates myself, but this is an expensive preparation, and not to be bought in small quantities. It is certainly, however, a fine tonic and strengthening medicine for birds. When they commence to pick about for themselves offer (in addition to soft food and soaked rape) maw seed, lightly cracked canary and hemp seeds, groats, or coarse oatmeal, shelled and broken up sunflower seed; also seeding heads of chickweed, shepherd's purse, and groundsel, and thistles in season. Don't, at the same time, forget grit and cuttlefish, likewise old, crushed mortar.

Advice in Brief.

Identity of Bird (J.J.B.).—I cannot call to mind any British bird which answers your description: "Buff breast, striped light and dark back and red crest." Is it one you saw out in the fields? Several Britishers carry red on the head; but there is never a one that carries a red "crest." Couldn't you give fuller details, and say about what size the bird was, also the locality in which it was seen?

Linnet Off Colour (W.W.F.).—It is difficult to say, from particulars given, exactly what ails your Linnet. Apparently, it is nothing very serious, and I think a dose or two of dandelion juice (taraxacum) would brighten him up, and put him on song again. Get threepennyworth from a chemist, and put half a teaspoonful in two tablespoonfuls of drinking water for two days; then give three or four more doses on alternate days, that is, plain water one day, taraxacum the next. I don't quite think his silence is due to the other Linnet "singing him down." You could keep them apart, however, and see. Thanks for your nice wishes. Redbreasted Linnets (i.e., spring-caught ones) are not good for Mule breeding.

Aviary Breeding (H. Williams).—Sorry to hear you have had nothing but clear eggs up to the present in your outdoor aviary. It is always somewhat risky to rely entirely on fresh-caught Goldfinches and Linnets. You should have introduced a moulted bird or two amongst them. Still, the weather has been really very bad, and several friends of mine have done poorly up to the present in their outdoor aviaries with birds which had bred before therein. Probably you will have better luck next round. You cannot do any more in the matter of feeding.

Linnet Not in Song (Car).—It is no use pairing up a Linnet which is not in song—clear eggs are a certainty, as you have found out. Make a mixture of hemp, niger, and maw seeds in equal parts, and give your bird a small teaspoonful daily (separate from other seeds). Let it also have seeding shepherd's purse and chickweed, likewise seeding dandelion heads and young leaves, if you can get them. I don't quite grasp what you mean by "just caught this season." If only recently taken it may be too nervous yet to sing.

An Unsteady Linnet (Manxman).—It is not much use pairing up in a cage a Linnet which is wild and unsteady; you would, in all probability, only get clear eggs. If you decide to try, bang their cage in a very quiet place, and only go to it for feeding, etc., purposes; even then as little as possible. Probably it is a very late caught bird (it is a mistake to buy such), and will not steady down until after the moult. The best house-cage is the box-pattern Finch stock-cage (see another reply this week). The diet of the hen Canary would suit the Linnet, giving them a teaspoonful of mixed hemp, maw, and niger daily (equal parts). Also give dandelion, chickweed, and shepherd's purse. The stock cage should be hung breast high in a room wherein people are constantly moving about.

Effect on the Song (W. Cook).—The notes of the two young Blackbirds will not affect the melody of your Skylark which is on full song. On the contrary, the young Blackbirds themselves are certain to pick up phrases of the Skylark's song, unless you school them under a good singing adult Blackie. I think Mr. Allaway made it quite clear in his article last week that it was the young (i.e., hand-reared) Skylarks which were certain to pick up strange notes if they chanced to hear other birds singing. All hand-reared birds which are gifted with powers of song are more or less imitative, though some birds' notes are picked up more quickly than others (as witness the Canary's notes with the Skylark).

Feeding a Yellowhammer (Head-marks).—The Yellowhammer only shows any particular liking for canary seed when in captivity; consequently that must form the staple diet of the bird you have. Try him also with small wheat and oats (crushed if you like), groats, coarse oatmeal, cracked hemp, shelled and crushed sunflower seed, maw seed, wild seed mixture, etc.; he may be tempted to take a little of one or the other, and the change will do him good. Rape and sunflower seeds, soaked in cold water until just bursting, likewise tempt many birds. Your bird should also have a little good insectivorous food every other day or so, and a mealworm or two daily, with other insect food (flies, etc.) in season. Live ants' eggs are a great treat. If only caught a month or two, you cannot expect to have him steady. Give him time; he may not really settle down until the moult comes round.

A Matter of Deportment; and a Nest (A Novice).—Several birds build in hawthorn bushes, and lay whitish eggs spotted with brown. You will have to describe the lining of the nest (and materials generally, if you can), and state the size of the eggs, before anyone can venture to say to what bird they belong. As regards whether Blackbirds and Starlings walk or run along the ground, I should have thought you would have found it more interesting to watch the birds and decide for yourself rather than appeal to me. I suppose you mean hop or run, do you not? Well, the Starling hops but rarely, but mostly walks and runs, like the Crow family generally. The Blackbird runs and walks on occasion, but mostly hops. I think that is an accurate summing up of the situation.

Feeding Red-backed Shrikes.

Can you tell me the best food for the common Red-backed Shrike? I have lost four already this season, although I have fed them on prepared insectivorous food and mealworms. Do they require sand at bottom of cage or not? Are waggon cages, about 2 ft. long, suitable for them, or are box cages better?—R.T.G.

R.T.G.—A waggon-shaped cage is by no means to be recommended for a Shrike; let it have a very large box-pattern cage. See the perches are of suitable size, and a nail should project through one, at back of cage, on which it will impale its food and tear it to pieces. Sand, containing plenty of coarse grit should certainly be supplied; though this is better given in a large tin placed inside the cage, as I certainly think peat-moss litter (teased out a bit, if necessary) is the most suitable covering for the floor of its house-cage. I think your trouble as regards keeping this species alive arises from the fact that you do not supply sufficient live food, and animal food generally. For food they require a good insectivorous mixture of biscuit meal, ants' eggs, dried flies, and meat meal—game meal (without grit) or "Melox" would answer admirably as the basis—moistened with grated raw carrot, finely minced green food, etc. The proportions would be game meal, four parts; meat meal and dried flies, two parts each and as good a sprinkling of ants' eggs as you can afford to put in. The latter, of course, are a more or less expensive item. One part of ground silkworm cocoons would also make an admirable addition. Finely scraped, or minced, raw lean beef or mutton must be regularly given, especially during the moult, also hard-boiled egg. Live ants' eggs are relished, likewise cockroaches ("black beetles"), mealworms, and most other insects (including bees), mice, and tiny birds. One of the best and safest animal foods you can give (especially when hand-rearing young birds) is rabbits' flesh, either cooked or raw.

A Young Bird and its Feeding.

(1) I have a nestling just able to fly. Can you tell me what sort and sex it is, and how to feed it? Head, back, and tail smoky brown colour, throat is dirty white, and the breast has a mottled appearance; legs are brown black; beak is dark, tinged with yellow. It is about the size of a Blackbird.—NOVICE.

Novice.—Your nestling, I should say, is a Blackbird. I don't see what else it can possibly be. Young Blackbirds of both sexes resemble the adult hen in plumage, and your description fits the latter exactly. When in nestling plumage the sex is very difficult for the uninitiated to decide. The cocks are a little darker looking on the wing flights. In a short time it will be moulting, and then the sex problem will be solved for you. If the bird is feeding itself, treat it on the lines so often recommended in my columns. Here you are again:—Go to a good bird-food vendor, and get mixed, by measure, game (or pheasant) meal, 6 parts; ants' eggs, dried flies and meat meal, 2 parts each. One or two parts of ground silkworm cocoons would add greatly to its efficacy. Get the game or pheasant meal which does not contain grit. If you experience any difficulty in doing so, crushed puppy biscuits answer equally well. Damp the quantity required for use with grated raw carrot, or finely-chopped, tender dandelion, chickweed, lettuce, watercress, etc., according to season, or cold boiled potato, varying it as much as possible. Give a few mealworms daily, and any live food you can get in season—for instance, smooth caterpillars, flies, spiders, waspgrubs, gentles, earwigs, beetles, cockroaches, and the like. A little ripe fruit and various berries, sweet apple, pear, split grapes, orange, red and white currants, banana, etc., straw, rasp, black, privet, elder, haw, etc., berries are also relished. You need never want for variety. Into the above stock food a proportion of preserved yolk of egg (flake) should be well mixed now and again, or a hard-boiled egg; or a little finely-scraped raw lean meat makes a nice change at times, but should not be overdone. A few snails, boiled and chopped up, are also greatly relished, and are fine things to induce birds to sing. Immerse them in boiling hot water for a time. Blackbirds are great fruit eaters, remember.

Menu for Nestling Jackdaws.

How often should nestling Jackdaws be fed? Had one given me about fourteen days old, died same day; found it had diarrhœa badly. Tried it with bread soaked in milk, hard-boiled egg, small pieces of raw meat, worms, barley meal, and hemp mixed with ants' eggs. Any useful hint on the above matter will be welcomed.—W.R.A.

W.R.A.—You should have no trouble in hand-rearing Jackdaws. Only the other day I heard a friend of mine say that, although he could never hand-rear small birds, Jays, Jackdaws, and the like he found as easy to bring up as young elephants. If you mix finely-minced bard-boiled egg with an equal quantity of very stale bread crumb, and moisten it with new milk when feeding, you should get along all right. If you get several young Jackdaws, however, you will find it cheaper to use scalded and mashed up puppy biscuits (of best quality), with which you can mix the egg in the proportion of three to one. You can give the youngsters mealworms, by all means, and smallish garden worms, cut into suitable pieces, should also certainly be supplied. Occasionally you can scrape a small piece of lean mutton or beef (or mince it up very finely) and give amongst the food; or a little tender cooked meat can be given. Personally, however, I fight shy of meat as much as possible, for I am certain it upsets the stomach of most birds (sets up diarrhœa), especially when much used raw. Mix a good big pinch of fine grit amongst the food now and again, or about half a teaspoonful of powdered cuttlefish bone. You can give the birds a drink of plain water after each meal, if you like, and you can please yourself about adding ants' eggs to the stock food. If any nestling should get a touch of diarrhœa (which is unlikely if you give the cuttlefish or grit), well mix a saltspoonful of prepared chalk powder (from any good chemist) amongst a portion of the food fed to it. Repeat after an interval, if it seems necessary. You seem to have managed to get plenty of variety of food down your bird, seeing you say you only had it one day. A feed every two hours is quite sufficient; though, if one can manage it, a little given oftener is no doubt best.

Treatment of Merlins.

Could you kindly let me know how to hand-rear young Merlins from the nest, and what to feed them on when able to feed themselves? Also give a short account of habits and nesting sites when wild.—A.W.

A.W.—Upon my word, I get asked some knotty questions. No wonder my curly locks are becoming beautifully less and less! The Merlin is the smallest Hawk we have in this country, and he is one of the most beautiful of his kind, as well as amazingly courageous and daring. The female is a sober-coloured bird in comparison (being brownish above and yellowish white below, as against greyish-blue above and reddish-yellow below), but equally fearless. Unfortunately they are far from common. The scanty nest is built on the ground, in May and June, on moors and in mountainous districts (often among the heather) in the northern parts of England, in Scotland, and in Ireland. Four eggs are laid, rounded in form, and pale chocolate in ground colour, mottled with dull red. In the winter the Merlin is more generally dispersed over the country. It feeds mostly on small Passerine birds (such as the Larks, Thrushes, and Finches), but on occasion will attack almost anything wearing feathers, and is bitterly detested by the gamekeepers, who, of course, put a charge of shot into it on sight. In captivity it must have small dead birds to feed on (catch and give Sparrows, for instance). It is not very keen on raw meat, or even mice and rats, though, of course, it will eat such, and earthworms, too, when hungry. Rabbit flesh is very good for them (if you can get it by some cheap method). The young must be fed on chopped up flesh of sorts when being hand-reared. Where are you going to get the nestling Merlins from, by-the-way? Give them a drop or two of water after each meal. Sometimes Hawks get very fastidious in the matter of food, and will not take birds in the slightest tainted—they must be freshly killed.

Hand-reared Song Thrushes.

A. W. White.—I should certainly think the Song Thrush you hand-reared last year, and which has as yet given no sign of singing, is a hen. There is no method by which the sex of Song Thrushes can accurately be told, other than by hearing them sing. The hens are often (one might say usually) bigger and stouter in build than the cocks—as, also, are hen Blackbirds—and that they are as good in colour and markings is evidenced by the fact that some of the finest Song Thrushes ever exhibited on the show bench have been hens. The cocks are generally longer and flatter-looking on head when viewed sideways, and perhaps a shade deeper in brown on the back, while I have heard some fanciers advance the opinion that they generally have a small light patch directly below the under mandible, free from all marking (or pencilling). The one sure test, however, is the song. In taking a youngster out of a nest, I should go for the most forward, best-developed one—such a youngster is usually to be found. Young cocks commence to "record" (or try over their song) almost as soon as they commence to perch—you can see their little throats working like the bellows of a concertina as they warble away. The hens will also "record," but not with the gusto of a real cock, nor with the same pulsation of the throat. Hand-reared birds should always have the opportunity of "learning" from the song of a good adult performer. If this is not afforded them, they never become really finished vocalists, but sing a medley composed more or less largely of the notes of any birds they happen to hear.

Blackbird's Damaged Wing.

Reader of "C.B."—If your young Blackbird broke its wing, and the latter has been allowed to set in the drooping position, I am afraid it is permanently disfigured. When the injury was fresh, you ought to have bound up the wing in position with, say, a suitable piece of tape, stitching it just sufficiently tightly round the body to accomplish that end. I have used such a bandage effectively myself. Generally it will be found to "bind" better if one or two flight feathers are left outside the bandage—that is to say, the bandage should pass between the third and fourth flight feathers of the injured, or both, wings. Another, but somewhat more crude method, is to hold the wings in position, and then tie them together near the tips with thick silk thread, which, of course, keeps them up on the back of the bird. But whatever method you adopt after this lapse of time, it is hardly likely to be of any avail. Should, however, the wing be carried in drooping manner owing to being badly bruised, this will be altered when the effects of such injury have passed off.

Goldfinch's Funny Behaviour.

A. Phillips.—Your Goldfinch suffers from fits. If he has been eating egg food in addition to a lot of stimulating seeds, then it is quite likely over-feeding is the cause. Give a dose of sulphate of soda for one day, dissolving as much as just covers a shilling in two tablespoonfuls of drinking water. Give plain water the next day, but the three following days put half a teaspoonful of taraxacum (dandelion juice) in the above quantity of drinking water. Stop all egg food, though if he will eat a little milk sop well sprinkled with maw seed, that will not hurt. Give only a little hemp daily (separate from other seeds), and let the stock mixture consist of teazle, canary, and maw seeds, with just a sprinkle of linseed. Continue giving a little dandelion—young leaves and seeding heads, as you can discover them. At the sign of a fit, dip the bird's head for a moment in cold water. If a course of treatment on above lines fails to end the trouble, write me again, and I will advise you further.

Blackbird with Growth.

Urgent.—It is regrettable that although the treatment I advised had quite cured the cold and inflammation of the eyes, the bird should now have commenced to develop a hard growth at the base of the beak. Your feeding and general management are all one could desire, and I can suggest nothing you are leaving undone that would be likely to cause mischief of the above nature. I should, personally, feel very much inclined to give the bird its liberty, and have done with it, especially so seeing it seldom sings. If you feel inclined to try the effect of treatment, get a little tincture of iodine from a chemist, and just touch the growth with it once daily. Use a tiny camel-hair pencil brush for the purpose, and be careful the tincture does not get on the surrounding parts. Mix a small saltspoonful of flowers of sulphur amongst its daily food supply for a time.

A Queer Lark.

T.P.—Parrish's Chemical Food is sold by every chemist—at least, I should think so. Give your Skylark one dose of sulphate of soda, dissolving as much as will lie on a shilling in two tablespoonfuls of drinking water. This may be repeated three or four days afterwards, if it seems necessary. You are not feeding the bird generously enough. You should use the stock food I recommend in these columns; or, at least, mix your food in the way I advise. Also read and digest Mr. Allaway's article in last week's issue. You will doubtless accomplish much good by getting a bottle of cod-liver oil and hypophosphates from a chemist, and mixing a small teaspoonful with the bird's daily food supply. Commence with but a small quantity only, and gradually work up to the strength advised. Give the bird some live food—four or five mealworms per day, at least, also a spider or two.

Two Dead Greenfinches.

A. B. B. Warrington.—Your bird died of inflammation of the stomach, though what set up that condition I could not possibly say, not knowing details of management. I certainly do not think, however, a seed mixture comprising two pints canary, and one pint each hemp and linseed, the best you could give to a Greenfinch. Besides, these birds want a liberal allowance of sunflower seed every day, no matter what others they get. Give your next Greenfinches plenty of this seed, and try the following stock mixture: Canary and teazel, one pint of each, hemp, linseed, summer rape and charlock a quarter pint of each. A little maw-seed will also be relished occasionally; likewise any good wild seed mixture. Greenfinches are fond of seeding chickweed and shepherd's purse, and both are very safe green foods; a little dandelion, of course, can also be offered. Finches do not want egg food. You can try them with a little insectivorous mixture now and again, either moistened with milk (see it does not go sour) or finely-minced green-food. Greenics are most easily kept in captivity as a general rule. If you want a definite opinion as to cause of death at any time, send a body to our Mr. North (vide post mortem rules). The loss of flesh would be incidental to the inflammation—or, rather, the illness—for an ailing bird usually becomes thin.

Not as He ought to be.

C.C.—You should not let your Linnet eat a lot of egg food. If he likes a feed of soft food, offer a little of a good insectivorous mixture moistened with a spot or two of milk (mind it does not go sour), or sweet biscuit treated the same way and liberally sprinkled with maw seed would answer well. You should not, either, overdo the hemp, niger, or linseed during the summer. They are quite all right to get a bird into breeding condition, but when that has been attained, they should be more sparely offered. To keep a bird strung up into very high (rank) condition, often means that he goes wrong. Treat your bird with sulphate of soda and dandelion juice (taraxacum) exactly as advised "A. Phillips" in this week's issue. Maw seed will not hurt it; quite the contrary, in fact. Chickweed and shepherd's purse are very good; but when kept in pots in water, the latter wants changing every day, and the green food itself should be often changed. I fancy the "forcing" food to which you have treated the Linnet has upset it. Write to any of our large seed advertisers for a sample of gold of pleasure seed.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

What Parrot?

(1) Principally green, top of head light blue, tail blue, under lower mandible a patch of black like a bib, and under this a strip of red, also like a bib; legs grey. What kind is it? (2) What is its value? (3) What is its food and treatment? (4) Is it a cock or hen? (5) Will it talk?—REGULAR READER.

Regular Reader.—(1) It is evidently an immature bird, and, I am inclined to think, a Blossom-headed Parrakeet, possibly the Burmese form. You give me no clue as to size; repeat this part of your query next week, giving me its comparative size, and state whether its tail is long or short. (2) If a Blossom-head or some variety of Ring-neck, its value 5/- to 10/-. Of course, an acclimatised and talking bird would be worth much more. Ring-necks make fair talkers, the Blossom-heads do not. (3) The diet or Ring-necks and Blossom-heads is a mixture of canary, Indian corn, hemp, millet, oats, wheat, and dari, in equal parts. Supply as extras ripe fruit, nuts, plain biscuits, green food, and a little boiled potato (dry), and raw carrot. Regular supplies of grit and cuttlefish must be given, also water to satisfy its thirst three times daily. Do not give slop or table scraps of any kind. (4) Cannot tell sex from data supplied; this is always difficult with immature birds, which up to a certain age mostly resemble the adult females. (4) Answered under query 2.—If you repeat query, and supply details asked for, I will try and give you a more definite reply.

Name of Parrot.

The dealer says it came from Jamaica. It is a darkish green bird, with every feather tipped with brown, giving it quite a scaled appearance; beak, white; forehead, whitish; lower part of face, streaked with red. What kind is it, and what is its probable value?—G.W.L.

G.W.L.—I am of the opinion you have the Jamaica or White-fronted Amazon (*Chrysotis collaria*). The Cuban form (*C. leucocephala*) is also called the Cuban or Red-throated White-headed Amazon, has the white extending well onto the crown and round the eye; the cheeks and throat are rose-red. If I am correct in my supposition that it is *C. collaria* its value is about 30/- more when acclimatised and mature.

Budgerigars not Breeding.

I purchased two pairs of birds in January last; they make a deal of noise, but have as yet made no attempt to breed. Is my diet correct? When ought they to breed?—ANXIOUS.

Anxious.—If you have true pairs, and they are in breeding condition, the cores of the male will be bright blue, and those of the female ruddy brown. Probably they were immature when you purchased them. Your diet is ample, but when they are feeding young supply a few white oats daily. These birds chatter a great deal, in fact, are on the go most of the day, and chattering noisily the whole time. If they were young birds and not fully matured when you procured them, they will not breed till quite late in the year. If on examining the cores over the nostril you find they are in breeding condition, you may expect eggs at no very distant date, while as a rule these birds breed under almost any conditions. Some individuals take quite a little time to settle down in new quarters before doing so.

Will They Breed?

I bought Hamlyn's Nos. 1 and selection as advertised in current "C.B." Will any of them breed? If so, which?—NEMO.

Nemo.—The Cutthroats, Javas, and Spicebirds are the more probable breeders. Waxbills are shy breeders in captivity, and Weavers even more so; even eggs are but seldom produced by the latter, which are mostly kept for their gorgeous summer

dress. The Mannikins are also shy breeders, but even with these and also the Waxbills while breeding results are improbable they are not hopeless. If you have them in an aviary, supply them with long grass, hay, etc., and fix up a number of nest boxes and leave them to themselves. If you are keeping them in cages, only one pair must be kept in a cage for breeding purposes, and the only ones really likely to breed are the Cutthroats and Javas.

Breeding Long-tailed Greenfinches.

(1) Will Long-tailed Greenfinches breed in a garden cage, 6 by 4 by 3 ft.? (2) What nesting accommodation is required? (3) What food do they require when feeding young? (4) Will they winter in the open.—AVIS.

Avis.—(1) So far these birds have not proved free breeders, though several aviculturists have successfully reared the young. There is no reason why you should not meet with success; at least, if the birds have any inclination to nest, you should meet with success, providing the birds have the cage to themselves. (2) Put up a branch of twigs at either end of cage, and hang a Hartz travelling cage at back of same; you will have to take out the fittings and remove a couple of the bars, so that the birds may have ingress and egress. Supply long grass, hay, and a little moss as building material. (3) Canary, white, small brown, and spray millet, liberal supplies of green food, and a saucer of soft food mixture, ants' eggs, dried flies, and crushed Osborne biscuit, in equal parts; make crumbly moist for use. (4) Your aviary is rather small for the purpose, but they should take no harm, if you can cover in the end of the cage so as to make a snug retiring place for night shelter. In this shelter put up twigs in the corners, and fasten bay to these, so that the birds will be able to shelter behind same. Hope you will have luck with them. In a large garden aviary I have found these birds absolutely hardy.

Macaw Plucking its Feathers.

My Macaw has recently taken to pulling out its feathers; it is fed on boiled rice, hemp seed, banana, and Parrot food. Is there a remedy for this habit?—GLOUCESTRIAN.

Gloucestrian.—The staple diet for these birds should be oats, maize, canary, dari, hemp, and sunflower seeds in about equal parts; also plain biscuits (dry), nuts, raw carrot, green food, and ripe fruit. Water should be offered them three times a day, permitting them to satisfy their thirst on each occasion. I should cease giving the boiled rice, and confine it to the dietary given above. I take it that the bird is in otherwise good health. For one day only soak a biscuit in Dinneford's Magnesia, and see that the bird eats it; if it will not, give one teaspoonful direct to the mouth, if it will permit you to handle it. If the soft food is necessary till it is eating sufficient of the dry mixture, give boiled maize in lieu of the rice; you can put the Dinneford's Magnesia on this. This annoying habit is very difficult to eradicate, and treatment is a trial of patience. Soak the portions the bird is in the habit of plucking with quassia solution; keep it occupied as much as possible, and give it wood, cuttlefish, etc., to exercise its beak upon. You might also try a light metal collar round the bird's neck, from which a piece of steel chain hangs over the bird's breast, but once this habit is definitely taken up, in most cases, the bird is never entirely broken of it. Hope you will succeed.

Cutthroats not Hatching Out.

My pair of birds procured a month ago, and there were eggs in the nest on Wednesday last; on the following day I saw the hen trying to keep the cock out of the nest. She was bleeding at the throat, he forced his way in, and there was a fight inside; he pulled the hen out, and seizing her by the neck, shook her well. I took the male away, but she forsook the eggs. They are building again. How can I prevent a like occurrence?—J.J.

T.J.—Such cases as yours are not by any means isolated, nor yet confined to this one species. There is plenty of time for nesting yet with these birds, which usually breed quite late in the season in this country. I am of the opinion that they have not settled down in new quarters yet, but if the male still persists in molesting the hen, the only way is to get rid of him, and supply her with another mate. You cannot treat these birds as you can Canaries, and take the male away according to convenience. My experience has been that if the male disappears (i.e., dies) before hatching, the hen forsakes the eggs; but after hatching, if the male should die, the hen will rear the young. This has occurred on more than one occasion in my aviary.

What Bird?

I have a Finch about the size of a Siskin; beak, legs, and feet, bluish; head and neck, dove colour; body and back, liver colour; belly and vent, blackish. What species is it, and what are the sexual distinctions? What is their treatment?—H.G.

H.G.—They are White-headed Mannikins. The female is much more smoky or greyer in the hues of her plumage, and her head is much darker in colour than that of the male. They make a pretty variation in a mixed series, and in a large aviary are fairly active, but in a cage they are somewhat dull and uninteresting. Song, as the term is generally used, they have none. Nevertheless, I have not found them lacking in interest in the aviary, and usually keep several species of Mannikins in my mixed series.

Amazon Out of Condition.

My Amazon is mopy, breathes rather heavily, and its nostrils appear partly blocked. Its bowels appear about right. Can you assist me? Grey I have had four months, and has not yet spoken. It is active, and, apart from a sort of trembling, appears healthy; its bowels are rather loose, and it plucks out the fluffy feathers from its breast, etc. What do you advise?—NEW READER (Surrey).

New Reader (Surrey).—The diet you are giving the Amazon is ample for nourishment, and I am of the opinion that its present condition is due to its previous unwholesome dietary. I should give it an aperient once or twice a week, but its bowels must not be allowed to become watery loose. For the next week or ten days give the following to drink: Ipecacuanha wine, oxymel of squills and glycerine, in equal parts, take one teaspoonful of the mixture and two ounces of water and offer same to bird several times during the day; while giving this it should have no other means of satisfying its thirst. Continue to spray the nostrils with diluted glyco-thymoline. When taking up the Chemical Food again, do not offer it merely at night, but let it have only this to drink the whole of the day, only supplying clear water once a week. If you keep it where it will hear plenty of conversation, as well as keeping up the constant repetition, it should soon say a few words. As regards the Grey, if it is healthy, and it appears fairly so, it would be best, I should say, to keep it. As to talking, treat it the same as reply re Amazon, and also the same as to Chemical Food. I should persevere in the effort to get it to take fruit; keep it warm and free from draught, and in lieu of the Chemical Food make its drinking water just saline with Epsom salts. Hope both birds will do well; always glad to help our readers.

What Parrot?

Beak, black; head, orange; eye cere, white; under eye, back, and breast, scarlet; wings, green. What kind is it?—E. POWLEY.

E. Powley.—It is the Jendaya Parrakeet or Conure (*Conurus jendaya*). This handsome bird should have in its staple food the following mixture: Canary seed, one quart, sunflower, hemp, oats, wheat, dari, half-pint each; well mix, and always keep a supply in its cage. Supply in addition ripe fruit, green food, nuts, plain biscuits, grit, cuttlefish, and water ad lib. It is a very showy species when fully mature.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a rep'y direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Avadavat (G.W.).—Congestion of liver and inadequate assimilation of food caused death of this bird.

Canary Hen (F. Thomas).—This bird had chronic liver disease, with recent inflammation and pneumonia. It was probably inherited and incurable.

Young Canary (Mrs. Shaw).—Inflammation of the liver and spleen, with rupture of blood vessel in first-mentioned organ. These are the infantile symptoms of "Bird Fever."

Juvenile Yorkshire (M. McV.).—This bird died of infantile inflammation of bowels and liver, then extending to the lungs. It is the result of cold weather, and nothing can prevent it.

GENERAL.

Answered by the EDITOR.

Clippings (Scottie).—Very many thanks for the items sent; they are, indeed, most interesting.

Cutting (H. Allsop).—Many thanks for cutting. It is most interesting, and you will see that we have used it. Glad you like the "Bird World" in its new form.

A Query (W.R.A.).—It is not always possible to answer a query in the issue of the week in which it is received, though we always do our best to try to ensure this being done.

SINGING CONTESTS.

The promoters of any bird singing club desirous of offering a "Cage Birds'" special prize for competition amongst their members should communicate with the Editor "Cage Birds," 154, Fleet Street, London, giving full name and address of club and number of members.

BRISTOL.

Linnet contest held at the New Inn on June 8th. A large number of visitors came to hear the singing, and were well satisfied. The result was:—Moxham, 90; Higgins, 77; Haskins, 70; 16 entries; Messrs. Taylor and Bruton judges; Mr. Griffiths timekeeper.—W. SHEPPARD, Sec.

LEEDS.

The usual contest took place at the Skinner's Arms, Buslingthorpe. Fourteen birds competed for three prizes; 1st and 2nd was divided by E. Ridgwell and F. Galley, Galley also taking 3rd; judges, F. Raper and T. Crane.—F. RAPER, Sec.

At King's Head, on June 8th, before a crowded house, for three prizes, given by Mr. J. Booth. Twenty of the best birds in Leeds sang. Some very good singing was heard. Galley and Hardcastle shared first and second, Whitaker third. On June 9th 19 birds sang. 1, Hodgson; 2, Hardcastle; 3, Naylor.—T. SUMMERS, Hon. Sec.

The Prince Albert Linnet Association met June 9th, to compete for three prizes, given by Mr. J. R. Saynor. There was a good attendance to hear the birds sing. Nineteen previous winning birds competed. Judges, B. Jackson and C. Whittaker. Result: 1st, Clarke; 2nd, Whitfield; 3rd, Binner.—E. WOOD, Hon. Sec.

SHEFFIELD.

At the Old Britannia, Attercliffe, June 9th, 18 birds sang for three prizes. There was a numerous company present, and some fair singing was heard. Watson, 60; Soldier Jack, 56; Robinson, 51; judges, Messrs. Bollington and Gregory.

SIR,—Re your question about secretaries and club houses, I am sorry to say that Linnet singers in Sheffield are a very disorganised lot. I don't think there is a single house in Sheffield to-day that has a club worked on a sound bottom. I have been working hard ever since the New Year came in to try and better things, but those who ought to have been the main helpers have not only failed to respond, but have also played myself and others some very funny tricks. Sheffield Linnet singers know what I mean. I am sorry to say our season is drawing to a close here, but I will let you know the results up to the finish. Hoping that next season things will be on a better footing, and that one man will not rob another, but try and work in unity and fairness together.

FREDK. WATSON.

A Mother's Devotion.

The devotion of a Stork to its young was exemplified at Basle yesterday, says the "Standard." The nest was set on fire by a spark from a chimney, but the mother bird refused to leave the fledglings, and all were burned to death.

A Tame Robin.

For some months the Robin has been a constant visitor at the house of Mr. J. Hillier, Holly Bush Cottage, Abersychan. The bird is so tame that it goes into the house, eats out of a child's hand, and hops on the table to pick up crumbs after each meal. In fact, the Robin has so settled down in its new home that it has now reared three young ones there, and the youngsters are as tame as the mother-bird herself. When Mrs. Hillier goes into the garden and calls "Robin," the bird soon perches on her shoulder. The bird has even made friends with the cat.

OUR CANARY BREEDING COMPETITION.

See Back Page this Week for Full Particulars.

SIR,—Your competition has done our Society a power of good in the bringing in of no less than thirteen new members in one night. I am exceedingly proud of its effects. Your cards are bound to do any society good if distributed. —J. T. CARRICK, Hon. Sec. Jarrow C.B.S.

SIR,—Please forward me a form for the Canary Breeding Competition (Novices). I have up to date eight young birds and 10 eggs under two birds, and one other laying, which completes my stock. My success I owe mainly to information gained from CAGE BIRDS.—A. E. BATE, Newcastle, Staffs.

SIR,—Please forward a form for your novice competition. This is my first season with Canaries, and I am having such very good luck that I hope to win your first prize. From two pairs I have had 16 eggs, and have got 15 youngsters, 12 on the wing, five nearly ready. One hen laid again.—E. BARBER (Woolsthorpe).

SIR,—Kindly let me know who to apply to as a member of the local cage bird society, who will come and examine my birds at the proper time. I have only one pair of birds; am I eligible? Can you send me the back numbers or coupons? This is my first year of Canary breeding.—H. T. HOWELL (103, Linacre Lane, Bootle).

You are certainly eligible. You can get the back numbers through any newsagent, or direct from us, by remitting price and postage. No doubt the Secretary, or some other official, of the Bootle C.B.S. will communicate with you.—EDITOR.

SIR,—Please send me a declaration form for the Novice Canary Breeding Competition. This is my first year of breeding, and friends tell me I am very successful so far. CAGE BIRDS is the only paper I read, and I have profited by its advice.—S. BROOKES (Frimley).

SIR,—I write for a declaration form. I have been a regular reader of CAGE BIRDS since purchasing my one pair in January last. I have also CAGE BIRDS ANNUAL, which I have found very useful. I have been pretty fortunate so far. Three out of four eggs, first nest, young doing well; second nest, six eggs, all hatched. Have never bred birds of any description before. —(Mrs.) S. CARDEN (Plumstead).

SIR,—I have never kept a Canary until this spring, when I bought a pair of Yorkshires. Can I enter your Novice Competition with one pair? If so, please send me form. I have had some wonderful luck so far—two reared out of four eggs, six out of seven eggs, and now she is sitting on eight. I have taken no advice but CAGE BIRDS.—F. GOSLING (Gravelly Hill).

Form duly sent. You are quite eligible.—EDITOR.

SIR,—I am entering for your Canary breeding competition (novices), and thought perhaps you might be interested to hear how I am getting on. I have nine cocks and eight hens, all Norwich. I have already 22 youngsters on the perches, 10 just beginning to get feathers, and 12 without any feathers at all. Two of the eldest have been rather badly plucked, but are getting over it nicely. I think I have had very good luck, but I have spent a lot of time with my birds, and have read CAGE BIRDS regularly, and got no end of valuable hints. I have not had to write asking questions, because I always find everything I want to know in one or another of the numbers. I should like to know what results some of the other novices have got. One of my pairs have reared me five beauties out of one nest, and they have now got five more that look like living.—L. PEEL, Alfreton.

SIR,—I should like very much to enter your Canary Breeding Competition, but only started reading CAGE BIRDS last week. Should I have to get the back numbers, in order to secure the coupons, or could I be exempted from doing so if I took the paper in regularly from now? I am not a member of any cage bird society. Should I have to join one in order to enter for the competition? Would two friends be regarded as "responsible persons" for attesting to the bona-fide operations of the breeder? I have bred Canaries for some years now, and have not found any great difficulty with them. I have four young birds so far this season, and the hen is sitting on three more eggs. I only have one pair of birds, as I find them quite enough to manage. I breed my birds in a large aviary.—A. A. LLEWELLYN (Clapham Park).

The coupons must be sent, as per rules. It is not absolutely necessary to join a society for the purposes of the competition, and no doubt the two friends would answer as "responsible persons," but it would be well to get an independent fancier to attest the results if possible. There are several societies near you.—EDITOR.

SIR,—Am I eligible for your Canary Breeding Competition? I consider I am a novice, having never in my life had any dealings whatever with Canary breeding till 1906. I never had a Canary in my life till my son brought me a pair from Las Palmas, and what I know I have learnt entirely from your valuable paper, CAGE BIRDS. I did not do much last year, as I was taken ill directly the breeding season commenced, and only my little girl, nine years old, to attend to the birds. But this year I have done exceedingly good—or people say I have. I have two cocks and four hens. The reason I had four hens was because the cocks were so vigorous, and would not let the hens rest on the nest, spoiling two out of the four eggs laid by throwing them out of nest, turning nest upside down. I have up to now 19 young birds on seed, all healthy and strong. One cock and two hens had nine chicks; the others had eight. Should I be allowed to sell any of the young before August 13th?—M. B. REED (Bristol).

According to our definition you do not come under the description, "Novice" (see Rule 1), and, consequently should enter in the "Old Hands" section of the competition. We certainly should not advise you to sell any of the young before the date of the competition closing. You will do well (and other competitors, too) to get your results checked from time to time as the season progresses. The more completely this is done, the better it is for the competitor, naturally.—EDITOR.

SIR,—I have been a reader of CAGE BIRDS since last December. I had a present made of three Canaries last Christmas—two hens, one cock. I got so interested in them that I bought three more, and they are doing very nicely.—T. B. TOMLINSON.

I should very much like to join your Breeding Competition. I have just completed my first round, and I have thirty young from seven hens and three cocks. I shall be very pleased if you will send me entry form and full instructions. —C. FREEMAN, Grimsby.

SIR,—As I bought a cock Canary from a friend last year, I made up my mind to take up the hobby of breeding this year, and was recommended to take CAGE BIRDS, which I did. I have found it very useful, for I did not know how to deal with the breeding of birds till I had your paper, which was about the middle of February, but I have learnt how to treat them since that time. I have been congratulated on my good results by several friends who have seen my birds. I have only two hens and one cock, and have got 22 young out of 28 eggs, so I have made up my mind to join the competition. I have recommended CAGE BIRDS to two more of my friends.—W. CHAPMAN, 42, Warwick Street, Walsall.

Prices in the Export Trade.

The following extract from the letter of a New Zealand correspondent will not be without interest for readers of CAGE BIRDS interested in the export trade of Canaries. For obvious reasons we have suppressed the identities of the English sellers, but we may say they are all men of light and leading in the English Fancy:—

From a private letter written from Melbourne to a friend of mine in Auckland, I learn that Messrs. Trotter and Sulk, of Sydney, got four Plainhead Norwich from ——; they cost them £26. J. White, two C.B. hens and the Crested cock for £62, also from ——, and were very disappointed with them, considering the price far too high. Mr. Hogg got a Coppy cock, but it was dead when it arrived. £98 10s. for eight birds! Another breeder got two each of Crests and C.B., one being dead, from ——, for £60; another man got a pair C.B. and C. from —— for £30. I hear they are pleased with ——'s birds, but are about disgusted with importing birds, as they are charged fabulous prices for ordinary stock. Another fancier is getting some from home, but a man has gone to England, and is going to pick them up for him, so he is hopeful of getting something good. The Plainhead breeders have had very bad luck, I hear, in Melbourne and Sydney, but the Crests have done better, some very good birds having been reared. I sent to Mr. —— for a pair of Norwich Plainheads (£5 pair) for a friend, and he was very well pleased indeed at the birds he sent. Mr. —— proved himself a true fancier. I couldn't raise the price of anything like that, not being supplied with this world's goods. I hope these men get on well with their imported stock, and wish your paper every success."

PROPOSED NORWICH PLAINHEAD CLUB FOR WALES.

SIR,—Seeing a letter from Mr. Dummett, I think the idea an excellent one. We have so many fanciers of this variety in Wales, and no specialist club to encourage them. I am prepared to do all in my power to support Mr. Dummett's suggestion, and trust that in the near future we shall have a successful Norwich Plainhead Club for Wales. W. H. LOVE.

NEST OF WHITE STARLINGS.

SIR,—An unusually rare nest of Starlings was found last week at Maids Moreton, near Buckingham. As the children came out of school they noticed an old Starling feeding her young in a hole on the roof, and as they stood watching her they noticed a white head pop out. A friend of mine called me to come and see it, and on the following morning he got up to the nest, and instead of finding one white Starling, he found three white ones and two ordinary ones. He put them in a cage for the old ones to feed, but unfortunately two of them got away, but the other one is going on nicely. We have also in the same village a white Sparrow, which has been here for several years. The Starlings have yellow beaks and legs. H. EALES.

THE TYPE OF THE NORWICH PLAINHEAD CANARY.

SIR,—I am very glad to see the N.P.C. have altered their standard. I am sure it will be beneficial to the club. Mr. Raynes says the breeders know a good Norwich, but are upset by the judges. Yes, sir, you are right in every word you say. We have had colour winning quite long enough. Another point I hope judges will keep their eye on this next season is good wing carriage and sound feet. I have seen both bad wing carriage and slippy-footed birds winning last season; both faults should put them out of the money. It is the members to say what type they want; then the judges to judge to that type. We want Norwich breeders to judge Norwich. Men that we know have bred good birds, not the buying exhibitor. The breeder is the man that knows a good bird. I am sure there are plenty of good men who won't be led by colour alone. I have not belonged to the N.P.C. for years. But now the standard is altered I will join again, and I am sure more will join. I will do my best to get some old members back. Wishing the N.P.C. every success.

ONCE A MEMBER.

THE CINNAMON C.C. CIRCULAR.

SIR,—Referring to the circular sent to members of the Cinnamon Canary Club, a copy of which appeared in your last issue, I would be glad if you can allow me space to contradict a malicious falsehood contained therein. I refer to the paragraph which reads:—Of the delegates named the following are against the Union in any shape or form—Messrs. Tyson, Dewhurst, Curtis. Can anyone imagine a more ungentlemanly action than to concoct such a lie, and to allow it to reach your office for publication? Simply because I am opposed to one clause in the Union rules, Mr. R J. Pretty thinks he has a right to inform whom he likes that I am against the Union in any shape or form. As a matter of fact, I supported the proposition that the City and Suburban should become affiliated to the Union, and if it were true that I am against the Union I would not allow myself to be elected a delegate by the members of the Association I now represent. After condemning the retiring Council, Mr. Pretty goes on to say:—Let us have men who can be courageous enough to say whether a judge is right or wrong. Is a delegate to be denied the privilege of having courage enough to say what, in his opinion, is right or wrong? Or is it one of the unwritten laws of the Union to crucify a delegate not in sympathy with every clause set forth in the rules? My contention is that the latter portion of Rule 17 will be the cause of a great number of members dropping out of affiliated societies, in order to have a free hand to exhibit where they like. Nor are we likely to increase the membership of our Associations when there are more privileges for a fancier not affiliated to a society. In trying to decipher Mr. Pretty's object for sending out such a misleading statement, I can arrive at no other conclusion than he was afraid that one of those three he refers to would get elected on the Council, and himself left out in the cold. Now that R.J.P. has reached the House of Lords of the Cage Bird Union, we may look forward to big things being done. And after his kindly references to members of the Council, I anticipate for him a warm reception when he goes Manchester way. A. W. CURTIS.

NORWICH PLAINHEAD CLUB FOR NEWCASTLE.

SIR,—It is very difficult to tell whether the above heading is correct for this correspondence or not. From the tone of Mr. Stone's last letter, it is a question if the suggested club (if formed) will be for Newcastle or not. It is just possible, if members wish, for it to be the second B.C.N.P.C. Be that as it may, I fail to see the answer of Mr. Stone's, if there is an answer at all. Why does he not become an active member of the B.C.N. and C.C., and work with untiring energy on its behalf? If unity will not succeed, surely sectionalism won't? To Mr. Stone let me say:—I regret circumstances prevent my assisting him in his object. One thing I can do, if he joins the B.C.N. and C.C., and my members are wishful, I will another year hand over to him the secretaryship, etc., of club, and that will be something to start with. Anyone contemplating joining this suggested club would do well to ascertain the membership of any specialist club, and compare it with the B.C.N. and C.C., and see which club is going to cator best for its members this coming show season.

ANTHONY HAY, Sec., B.C.N. and C.C.

BURTON-ON-TRENT C.B.S.

SIR,—As a result of the letters which recently appeared in CAGE BIRDS, a meeting was held at the New Inn, Station Street, on June 4th, which was attended by a large number of local fanciers. After some discussion it was decided to form a society devoted solely to the interests of cage birds, and to be called the Burton-on-Trent Cage Bird Society. It is open to anyone regularly employed in the town, and to those residing within a radius of six miles from the Market Place. Business proceeded apace, and the election of officers was accomplished without the slightest difficulty, the following being elected:—Committee, Dr. Docherty (Chairman), Mr. Kirkland (Vice-Chairman), Messrs. Emery, Parker, Secret, Watson, Elliott, Lea, Cameron, Bellamy, Hathaway, Coltman, Hakes, and Halliday, whilst Mr. Dicken was, in spite of his protest, elected Treasurer, an office for which he is well suited. Mr. W. A. Cooke, of Bretby, Burton-on-Trent, was unanimously elected Secretary; and Mr. C. P. Smith, 126, Blackpool Street, Burton-on-Trent, Assistant Secretary, either of whom will be very pleased to hear of any fanciers desirous of joining the society. It augurs very well for the future of this new society to be able to state that 30 fanciers have already promised to become members. After careful consideration, the subscription was decided by vote to be fixed at 3s. per annum, without any entrance fee, the society to admit lads under the age of 18 at a nominal fee of 1s. It was decided to hold a Nest Feather Show on Saturday, July 13th, to be open to members of the club. The next meeting will be held at the New Inn, Station Street, on Tuesday, June 18th, at eight o'clock, for the purpose of confirming the rules, and for other important business, including the fixing of the date for the annual open show, when it is hoped to see a large number of new faces. W. A. COOKE, Hon. Sec.

THE SCOTCH FANCY MODEL.

SIR,—Yes, "Piebald," you and your friends may look to the inner circle for information, but I am much afraid you will be disappointed. I would ask "Piebald" to turn up the report of Sub-Committee meeting reported in CAGE BIRDS last year, and compare with my last letter. Fancy a model being selected by consent, and a few weeks later additions made to this selected photo. By whose consent? Who passed it? And what official retains the original? Seeing this photo was distributed in Scotch Fancy circles previous to any meeting, was any mark put on it? To make matters more clear as to the inner circle (it's a small one), I was told by one of the Committee that Mr. T. Smith had received a letter objecting to this photo, to be submitted by Mr. Wright. I asked for this letter, also for any information on this letter, but up to now I am still unanswered. As a member of that committee, I contend I had a right to be answered. The standard of points for merit, shape, and position for judging was never discussed at any meeting, and I contend a greater farce was never acted in the whole cage bird Fancy. I am pleased to see "Piebald" strike the right note—Dutch Belgians, and their frills. We can see some striking resemblances of this bird on looking through the classes. Are the birds handsome? No! What do they lead to? The art of faking. Here is my point. While travelling to a New Year Show, one fancier said to another, "You are not fit to unlace my shoes at the job. I'll play second to only one living man." This conversation was on dressing or faking these Dutch-Belgian cross-breds, which have done so much winning on account of size and feather. They are stiff jointed, and rarely last more than the first year's showing on account of the stiffness. They also lack that grace, beauty, and nerve which has so great a charm in a real good Scotch Fancy. Such beauty, found in the right birds, if properly cultivated, should keep the Scotch Fancy in the right place—the head of the cage bird Fancy. J. HARRISON.

A FEW QUESTIONS AND IDEAS FROM AN AMATEUR.

SIR,—There are many vexing questions and problems, in the course of twelve months, to be read by any keen peruser of the bird papers. Such questions and problems upset an amateur's calculations. For my own part, I may say that I have kept birds for two seasons, and have found that there has arisen many very serious problems during that time; I think that the greatest and perhaps the most serious of which is probably the mating of birds to produce show specimens, although another which runs it very close in importance is the feeding or non-feeding of hens; but of the latter I don't think there is anyone who can, or even hopes, to be able to give a satisfactory solution. But to return to the mating question. How many times do we read that this method is right, or that method is right, most of these happy solutions contradicting the preceding solutions more or less? Now, what I want to ask is, Why cannot there be a census of results, taken throughout the Fancy, or even throughout the C.B.U. members? First, as to whether offspring do mostly resemble in their general character the mother or the father? Surely there is a marked resemblance one way or the other? Some say we get size and colour from the cock, and type and quality from the hen. Again, we read that men have got good results from a small cock and a large hen; further we read that it does not matter either way, if you know what the parents are bred off. So that anyone who, like myself, has had but very slight experience, is somewhat in a fix to decide either one way or the other. Now, in the breeding of other things, in which I have some experience, I found that there was, to a very great extent, a certainty of results, from given methods; that is to say, I could depend on the male offspring bearing the characteristics of the mother, and the female offspring the characteristics of the father, almost every time. This, I may say, was in the breeding of Old English Game and O.E.G. Bantams, and I am rather inclined to believe that the same results obtain in the case of Canaries, but would like to have the opinions of the general Fancy as to what their experience has taught them. Another very complexing question at the present time is the much-abused Rule 17 of the C.B.U. We read that it is coercive, and it is this and that. How do the rules of the C.B.U. compare with the rules of, say, the Kennel Club, the Jockey Club, or some of the grand organisations of labour unionism? Unless the rules of the C.B.U. are binding, or, shall we say, even coercive, of what use are they to stamp out and eradicate once and for ever some of the pernicious practices in the Fancy at the present?

SPRATT'S PATENT, LIMITED,
24 & 25, Fenchurch Street, London, E.C.

I have no doubt that some will say:—What does this man know? He's only an amateur. But then an amateur can read his paper, and cannot fail to see the petty bickerings therein. Let the Executive Council at once decide, and until all societies come into line adhere rigidly to the rules, and, what is more, don't make fish of one and flesh of another, whether the society be a large one or a small one. Again, regarding Rule 17 and its consequences, is not the C.B.U. strong enough to be able to say that unless societies or individual exhibitors join the C.B.U. that they must not exhibit at affiliated shows? This is coercion, but is, in my humble opinion, the only course open. Witness the strength and power of such societies as the Amalgamated Society of Joiners, etc. I believe that the members are not allowed to work with a non-Union man, under any circumstances. If the C.B.U. would adopt stringent measures, and appeal to its members to help affiliated shows in non-Union districts, there would soon, I think, be a better understanding brought about. Another idea (perhaps an equally insane one) is: Cannot the C.B.U. organize a method of registration of stocks, so that we might know what we are buying when we want a change of blood in our breeding rooms? One similar in principle to the registration of dogs by the Kennel Club. Would not this, if feasible, have a beneficial effect in the Fancy. If this idea is thought worth while, I have a method of working it that I would be pleased to suggest. These vapourings are the result of my reading letters from Mr. R. J. Pretty and others, who, I believe, are conscientious workers for the C.B.U. and its interests. In conclusion, I may say that I hope these ideas may be, in some way, of interest to those who, like myself, are seekers after knowledge, and who would like to see the C.B.U. prosper.

S. WITHINGTON.

WATFORD C.B.S. AND RULE 17.

SIR,—I had no intention of entering into any controversy on the above subject, but on looking through CAGE BIRDS I find the Committee of the Watford Cage Bird Society have voted that Rule 17 of the C.B.U. remains as at present. There also appears a paragraph in which it is said one newly-elected member at the adjourned general meeting last week sent in his resignation to this Committee, because the whole of the members at the said general meeting spoke in favour of the rule standing. Now, whoever wrote that paragraph has made a very misleading statement. At this aforementioned meeting, at which about 18 members out of 70 were present, the question as to whether we should vote for Rule 17 to stand or not was brought forward by Mr. R. J. Pretty, the Chairman, for discussion. I spoke strongly against the latter portion of this rule, in which it states:—"And registered members of the Union shall be liable to suspension if found exhibiting at a non-affiliated or non-licensed club show, other than first feather shows and shows confined to members." Mr. R. J. Pretty, who was sitting near me, at this point interrupted with the remark that such was not the case, as Mr. Lythgoe had given him and several other members permission to exhibit at the West Herts Fanciers' Society Open Show. (I see in Mr. P.'s reply to Mr. Tyson he denies that Mr. Lythgoe gave him permission to exhibit at Watford.) I then asked what was the good of having Rule 17 when certain exhibitors were allowed to break it and not the slightest notice was taken. I am in the position to state that the West Herts Fanciers' Society did not apply to the C.B.U. for a licence for their show, and neither did they have one, yet in spite of this, Rule 17 and everything else, certain members of the Watford Cage Bird Society, but non-members of the West Herts Fanciers' Society, were allowed to and did exhibit at the latter's Open Show in December last, and I can quote their names if necessary. This is at least one clear proof that although the C.B.U. may make a rule, they evidently lack the power and strength to enforce and see that it is adhered to. Then how on earth can they be competent to govern the whole Fancy? The idea is simply absurd. Now we will return to the adjourned general meeting at Watford. Several members left this meeting just as the question on Rule 17 was brought forward, and of the remainder, about six took any interest or part in the discussion. As the time at our disposal did not allow us to arrive at any definite decision, this matter re Rule 17 was not put to the vote, and the meeting was adjourned in the midst of the discussion, and it is entirely wrong and misleading for any person to state that the whole of the members spoke in favour of this Rule 17 standing as at present. But now, to crown all, instead of calling another general meeting to decide this important matter and conclude the business left at the adjourned one, Mr. Pretty and his Committee arranged a nice little meeting all to themselves, rushed Rule 17 through (or, rather, agreed it should remain as at present) without even consulting the members. Is it any wonder the latter resign and do not pay their subscriptions? And until the Committee act in a more unselfish and more businesslike manner, acting in co-operation and unity with its members, especially upon important subjects, such as Rule 17 of the C.B.U., it will never forge ahead. At least, such is the opinion of one who bears them no ill feeling, and who for the present signs himself as he is now best known. THE MEMBER WHO RESIGNED.

(For further matter on Rule 17 see page 526.)

BEGINNERS: You MUST read the ANNUAL.

SHEPHERDS PURSE.

SIR,—The nearest cultivated plant I can compare it to is London Pride. It grows on country roadsides and banks, mostly in patches, bears a white flower, and with us (the Midlands) it is now half flower and half seed pods. As the flowers set on the stems and laterals it forms small heart-shaped pods, purses, or pouches. For curiosity I have often asked people in the country if they knew it, and although growing at their feet they have answered in the negative. When pointed out to them, of course, they have known it all their lives, but not by name. THOS. SOAR.

THE EARLY MOULTING OF BRITISH BIRDS.

SIR,—I could answer "G. Jacobs'" query how to force moult British song birds. Before the County Councils made laws for the protection of birds I yearly practised it, but as it is considered a cruel practice, I will only give a few remarks. A Goldfinch-Canary Mule, taught the song of the Goldfinch and Linnet, is the easiest and quickest bird to force into moult. A Goldfinch or Linnet must be over a year old and cage-moulted. It takes from eight to ten weeks to fully moult them, and they must be in full song at the commencement of the moulting process. There is a risk of losing the best birds, as they often die from catching cold shortly after the moult is finished.

J. H. VERRALL.

BRITISH BIRDS IN BRADFORD.

SIR,—I refute Mr. King's statement that the meeting was not published in the Fancy press, as I myself saw the invitation, and over the name of Mr. H. J. Chittenden. The meeting was duly held, and surpassed in enthusiasm the most sanguine expectations of its convener. It may be, as Mr. King suggests, that we have not many fanciers of British birds in Bradford. One of the speakers, advocating the scheme, admitted we were lacking in enthusiasm, and said if a club was formed it would most certainly foster the keeping of British birds for exhibition. With regard to the question of the 21 initial members, being a young fancier, I do not know all who attended personally, but can vouch for the accuracy of the following, that one of the Vice-Presidents has at least two nests of Mules, and a few pairs up for hybridising (one Chaffinch-Bramblefinch), and all the members of the Committee were elected (subject, of course, to their names going forward at next meeting), because they at least were each in possession of a few British birds, and last Saturday, at Great Horton Show, two of them shared the spoils in the British class. I have about 20 British birds up for Hybrid breeding, and not one Canary that I bred this year, as I only keep them as an adjunct to British. As to the club being under the wing of the Yorkshire Union, it is a specialist club, its sole object being to foster a liking for British birds and Hybrids, and is affiliated to no society. It will be for the members to say if it shall become a branch of the National British Bird and Mule Club. It is the intention of the club to extend its patronage to all parts of the county of Yorkshire. All residents in Yorkshire are eligible. I may say that since the notice appeared in the Fancy press, I have received letters of encouragement, and signifying a desire for membership, from Castleford, Sheffield, Otley, Halifax, etc. The membership is already nearing the half hundred, and we extend a hearty welcome to Mr. King or any other fancier to attend our next meeting at Bradford West First Feather and British Bird Show, held in Whetley Lane Schools, Bradford; meeting starts at seven o'clock, when business will be to ratify the election of officers, making rules to govern the club, etc. I trust this gives Mr. King all the information he requires, and that he will see his way to swell our membership.

W. R. MYERS, Sec. pro tem.
Bradford and County B.B. and M.C.

THE CRESTED CANARY CLUB AND THE C.B.U.

"The Remedy is Rule 17."

SIR,—Belated though it be, I am pleased to see Mr. Greeves make some attempt to answer my letter of April 27th last. I don't mind Mr. Greeves, or any other official of the C.C.C., drawing the attention of his fellow-members "to the importance of well considering such a matter (i.e., affiliation to the C.B.U.) before voting." No one could object to that. But, mark you, Mr. Greeves goes out of his way to influence his fellow members with all the strength of words at his command to vote against its affiliating to the C.B.U. He alleged, amongst other terrible things, it would involve the total wrecking of the C.C.C. If such language does not deserve to have the term "hysterical" applied to it, then I am quite willing to withdraw that epithet. Of course, that affiliation might injure the C.C.C. if a number of its members carried out their threat to resign should it come about, I cannot deny. But can Mr. Greeves, or any other fair-minded man, uphold such a selfish, one-sided policy? It says, in effect, "If you don't do as we want you to, we shall decline to play with you any longer." If that is not coercion, then I should like to know what is. It would seem that there are those who gird at the C.B.U. because it has a coercive rule (and a needed rule, too), yet who indulge in a far worse form of coercion themselves. They would, if necessary, deny a *majority* of fanciers the right to do as they think best, by wrecking the club they have all a common interest in. What humbug! Then, again, certain high officials of the C.C.C. have been making capital out of the fact that the C.B.U. Council told its members that Rule 17 ought to be kept in operation, as they believed it essential to the well-being of the Union. The aforesaid officials turn up the whites of their eyes in indignation, and hold it up as a dastardly attempt to bias the result of the voting. Ought not the letters of Mr. Greeves and the actions of certain other officials to be held up to the same censure? Certainly they ought, for they constituted a deliberate attempt to influence the voting of the C.C.C. members. That suited the "powers that be," however, so, of course, it was quite all right! The plain truth is: The C.B.U. could not possibly do anything right from their point of view; they don't, in short, want it to do. Is the power for good which lies in such a body as a Union governing the cage bird Fancy to go to the wall to suit the petty whims and jealousies of a few, however high-placed they may be? I don't think so. The issue lies in the hands of the cage bird fanciers of the kingdom. If they were dissatisfied with the officials of their local society, they would elect others; they wouldn't close the society down. If the present officials of the C.B.U. are not the right men for their posts, then let us also elect others. Why should we close down a body for which the Fancy has waited for years, and which has been proved in the past to be badly needed? Rome was not built in a day, and neither can any Cage Bird Union be perfected in a few brief months.

Mr. Greeves's three arguments do not impress me. (1) Because "lawyers disagree," he would apparently leave us to infer we should draw up no rules at all! If we do the best we can, we clearly cannot do more.

(2) He appears to read into the words, "governing body to the whole Fancy," the meaning that the C.B.U. would govern every society (including the C.C.C.) in the sense that it would tell them what they should do, how they should go to work, and goodness only knows what else. This is a fair sample of the "arguments" brought up against the C.B.U.! As I have said before, and as every man who makes himself acquainted with the objects of the C.B.U. cannot fail to see, that body never set out to interfere with the inner workings of any society, and it has never done so up to the present. All it asks, and sets out to ensure, is that certain broad principles contained in its rules shall be universally observed—and those broad prineiples are merely things which, only a short time ago, the whole Fancy (including high officials of the C.C.C.) was crying out ought to be observed. How, I ask you, Mr. Greeves, will the C.B.U. interfere with, much more "totally wreck," the C.C.C.?

(3) Mr. Greeves points out that the C.C.C. allows the under feathers of the erest overhanging the bird's eyes to be cut, and asks, who is to decide in case of disqualification, the C.C.C. or the C.B.U.? If the exhibitor is reported to the C.B.U. (as he must be if the show is an affiliated one), then, of course, the C.B.U. will decide. But does Mr. Greeves seriously wish us to believe that the C.B.U. would overlook whatever the officials of the C.C.C. had to say on the matter? I can hardly think it. If a judge thinks any exhibitor has overdone the under-feather clipping, he certainly ought to disqualify that exhibitor. The case would be exactly on all fours with the case of the disqualified Green Canaries at the last Crystal Palace Show. In the latter instance the C.B.U. gave every weight to the evidence brought forward by the specialist Green Canary Club, and there can be no doubt that but for the testimony of that body of fanciers the exhibitors concerned would have been punished. Yet this evidence of the desire of the Council of the C.B.U. to consider and give due weight to the wishes of specialist clubs is actually being scoffed at, and held up to their own condemnation by certain officials of the Crested Canary Club—officials who in the same breath tell their own members the C.B.U. is sure to ignore and override their own wishes! Truly, some things pass one's understanding. Surely this is "ridiculously absurd" enough for you, Mr. Greeves? One last point: I think in saying "one would imagine the C.C.C. was a London club," you have unconsciously hit the nail right on the head.

To my fellow members of the C.C.C. I am only left this to say: Don't let yourselves be blinded by the arguments (?) of others—no matter how highly placed and fluent with tongue and pen—against so useful and necessary a body as the C.B.U. The latter may not be perfect yet; but we, and the Fancy generally, can make it so in time. Weigh up well the great good a C.B.U. can be to your hobby. The talk about "coercion" is so much nonsense. If we are satisfied such a body is conducive to the good of the Fancy, then it ought to be our first desire to compel all fanciers and societies to join and support it. If we stick to Rule 17, we can achieve this desirable end. How many shows worth being patronised can then hold a fixture without the C.B.U. support? None; they could not pay their way. So there need be no question of non-affiliated fanciers being able to show where affiliated fanciers cannot. The remedy is Rule 17.

A COUNTRY MEMBER.

I have seen it stated, writes "J.H.V.," that our late lamented friend, Dr. W. T. Greene, did not favour mule breeding, and a doubt seemed to exist whether he ever tried mule breeding himself. I have a distinct recollection of reading in one of his many works an account of his experiments in breeding Greenfinch and Canary mules in an outdoor aviary, which, if my memory serves me correctly, he kept for a time to try to ascertain whether these mules would be fertile; but they were not.

A LONDON SECRETARY HONOURED.

Presentation to Mr. Victor Wynn, the Hon. Sec. of the City and Suburban A.C.B.

It was once said by some unimportant scribbler that the ideal club secretary was one who gave his members every opportunity for grumbling and no cause. This super-cynical view of a secretary's duties would not find favour with the members of the City and Suburban Association of Canary Breeders. Mr. Wynn, the urbane and affable secretary of that body, gives his members neither opportunity nor cause for grumbling, and a more popular official it has never been our lot to encounter. At their last meeting an item "not upon the agenda" was brought forward by Mr. Burn, the Chairman, who, after a mysterious and lengthy preamble, disclosed the fact that Mr. Wynn was to be specially honoured by the Society and presented with a very slight token of their deep personal regard and appreciation for services rendered. A large gathering of members had assembled for the occasion. Those present included the following: Mrs. Maher, Mrs. Harris, Mrs. Lewer, Miss Sheppard, Messrs. Burn, W. A. Shepherd, Curtis, Martin, Bryant, Lazarus, Crisp, Hart, Knight, Goddard, Turner, Large, Cox, Dewhurst, Wheller, Thorns, Wyse, Curry, Burton, Vickery, Daintry, Offord, Sanders, Pullinger, G. Shepherd, Roake, Kelly, Morrison, Elgar, G. R. and W. W. E. Morris, R. J. Cooper, B. J. Cooper, J. Robson, J. Pooley, John Tyson, G. E. Weston, Laccohee, T. R. Trower, W. S. D. Reynolds.

Mr. V. WYNN,
The recipient of a very handsome testimonial, comprising an illuminated address and gold sleeve-links, from the Members of the City and Suburban A.C.B., of which he is the Secretary.

The Society's gift to Mr. Wynn consisted of an illuminated address, handsomely framed and richly prepared, together with a set of gold links elaborately engraved. Mr. Burn, in making the presentation, first of all tendered a cordial welcome to the representatives present from other societies. The members of that society desired to put into tangible form their gratitude to Mr. Wynn for the services he had rendered them. No man in their society or in London had done so much to elevate the Society in the eyes of the Fancy as Mr. Wynn had. He worked carefully yet zealously. He thought out all the details. They had their little controversies in that Society from time to time, and the smooth and pleasant sailing of their affairs was due in no small measure to Mr. Wynn's tact, and conciliatory methods. Mr. Wynn had realised the high standard that it was necessary for their club to run on. The gift they were making to him that night did not adequately convey their sense of his value to them. It was simply a token of their desire to place on record their sense of gratitude for splendid services rendered them.

Mr. Curtis endorsed Mr. Burn's observations. Special mention was made of the assistance given by Messrs. Shepherd and Burn in the preparation for that evening.

Mr. Crisp said that Mr. Wynn seemed imbued by nature with a special disposition for the office of a secretary. He was always courteous, kind, conciliatory, and ready to help. Men of Mr. Wynn's placid temperament generally lacked force, but in his case that was not so. Mr. Wynn had linked himself to them by a chain of affection (a humorous allusion to the gift of links). Messrs. Weston and Robson both voiced in high terms their opinion of Mr. Wynn's capabilities. Mr. Tyson, speaking as the representative of the L.C.B.A., said that it afforded him the greatest possible pleasure to testify to Mr. Wynn's high qualities. He was a perfect gentleman. Mr. F. J. Martin endorsed the encomiums of the previous speakers to the full.

Mr. Wynn, upon being called on to reply, was deeply affected. He professed himself bewildered by the unexpected and sudden character of the honour they had sprung on him. He could not help feeling that honour was undeserved. (Loud cries of "No, No!") He had only been their Secretary for 18 months, and what he had done would be done, he was certain, by any other member placed in the same position. (Voice: "Query.") A fortnight ago he had placed his resignation in the Chairman's hands. He had done so because he felt he was not able to cope with the modern school of thought. (Laughter.) If he had only half as much brains as he had energy he would be better pleased with himself. The heartiness of their tribute that night overwhelmed him. The good feeling they showed did not surprise him, but it deprived him of the power of appropriately expressing his sentiments. The memory of that evening would remain with him long after the links had worn out and ceased to be of service. It had always been, and always would be, a pleasure and not a labour to work for such a society and such large-hearted men as they included amongst them. He thanked all present most heartily.

Mr. Burn then caused laughter by declaring Mr. Wynn's resignation withdrawn, and informing him that it was no use tendering a fresh one as it wouldn't be acknowledged.

The illuminated address was worded as follows:—

"To Mr. Victor Wynn. The members of the City and Suburban Association of Canary Breeders and British and Foreign Bird Fanciers ask your acceptance of this address and gold links as an expression of our appreciation of the efficient and courteous manner in which you have always performed your duties as Honorary Treasurer and Secretary. We gratefully recognise that we owe a large measure of the success of our Association to your devoted labours. We also offer you our hearty good wishes for your future happiness and prosperity, and that for many years to come you may be enabled to continue your faithful labours to further promote the interests and welfare of our Association and the Fancy generally."

BRADFORD (EAST) O.S. RAMBLE.

The members had a splendid ramble to Harden and Bingley on Whit Tuesday. The afternoon was rather wet at first, but opened out gloriously fine, and those who faced the gloomy outlook had the satisfaction of having an afternoon's enjoyment that will rank in the minds of each one present for a long time to come. The company numbered 46, including a fair sprinkling of ladies, who added charm to the proceedings as only ladies can. We also had the company of Mr. Chittenden, who joined the party at Bradford, and I might as well say at the outset that he proved a host in himself to many of the members, for the experience that he has had in wild bird life found expression in this beautiful country, that abounds with all that Nature holds dear. He proved an adept at locating the different species of birds and their nests. We were not long before we had located about a dozen different birds, amongst them being the Redstart (sitting on a clutch of eggs), Chaffinch, Throstle and Blackbird. When we arrived at Harden a cricket match was indulged in, between two elevens picked by Messrs. Hill and Laycock, and excitement ran very high as first one side and then the other got the advantage. Mr. Hill's team batted first, and reached the small total of 29. The match was considered a gift for the other side when the score stood at 23 for four wickets, but a change in the bowling brought the desired effect, and the next six wickets fell without any addition to the score. We next adjourned to the Malt Shovel Inn, where Host Hustwick provided a substantial tea, to which everyone did full justice, the fresh air having given us an appetite that took a lot to satisfy. We then wended our way through that stretch of woodland scenery that earned Bingley its name as "The Throstle Nest of Old England"; nor does it belie its name, for Nature in all its beauty holds sway. It provides naturalists with a feasting ground that can even surpass their hearts' desire. What can be grander than the view from the lodge gates at St. Ives, or what stretch of imagination can paint a picture half as fair as that little winding lane down to the old rustic bridge at Beckfoot? From Beckfoot Bridge we went on the riverside, then crossed Cottingley Bridge. Whilst having a chat with an angler about Kingfishers, he said that he knew of a nest on the riverside. This reminded me that I knew of a sportsman who last year followed a pair at this particular place for a month before he succeeded in shooting the male bird, simply to adorn his bird-case, which already contained five specimens that had been shot on the river round the Bingley district. I thought that it would have profited him better if he had found some more dignified work to do than this wholesale destruction of rare birds. At this point we noticed three pairs of Wild Ducks flying very low down, also some Sand Martins nesting on the riverside. We then went forward through Nab Wood and made for Saltaire, getting a special car to convey us back home, each and all satisfied that we had spent a profitable afternoon, and one that had taught us many lessons in Nature.—H. HILL, Secretary.

Double Value.

On June 8th, when I was taking a walk in the fields, writes "C.B." (New Houghton), I came across a Blackbird's nest containing four eggs. I accidentally broke one, and, to my surprise, it contained two yolks. For curiosity's sake I then broke the remaining three, and found three double yolks out of four eggs, altogether seven yolks in four eggs.

SUGGESTED MODEL NORWICH PLAINHEAD CANARY.

Submitted to the Norwich Plainhead Club by Mr. A. PADDOCK, King's Heath, Birmingham.

SEND FOR

Cage Birds = Annual =

And you will be delighted beyond expression at the value received.

Never was the bird keeper better catered for in respect of birdy literature than he is to-day, and nowhere can you find a handier, more practical, or complete guide to the hobby of cage bird keeping than I offer in CAGE BIRDS ANNUAL.

Listen to this conversation between a beginner and our publisher:—

Publisher.—Take one of our ANNUALS, Sir?

Beginner.—Not I. What do I want with an annual? I've got the weekly.

Publisher.—Without disparaging the weekly, Sir, the ANNUAL is a totally different publication. The ANNUAL is a handy work of reference. You find its value right throughout the year. You never know when it may come in handy—save a bird's life or give you exactly the item you want to know.

Beginner.—By George, that's handy! Will it also tell me how to breed Canaries?

Publisher.—Certainly! And also how to breed Mules and Hybrids. There is also a chapter on keeping a pet bird, and a most useful article by Mr. Sam Drake on "Rearing Young Canaries."

Beginner.—I think I'll take a copy. Stay, though, I'm not only going in for Canaries; I may take up foreign birds.

Publisher.—Then you ought to read Wesley T. Page's chapter on "Some Pleasing and Beautiful Foreigners."

Beginner.—But suppose any of my birds become ill. Where shall I find this ANNUAL come in then?

Publisher.—Just where you want it, Sir. The chapter on diseases is arranged in alphabetical order, and is most comprehensive in character.

Beginner.—It certainly seems a valuable idea.

Publisher.—Valuable! It's worth its weight in gold. Why look here, Sir, in addition there's a chapter on "How to Identify the Call Notes and Song of British Birds," a review of the exhibition year, a breeding register, a show record, a cash account, a list of cage bird judges' names and addresses, a list of the bird trade, a list of breeders and exhibitors——

Beginner.—Stop! stop! man; give me a dozen copies. I'll take them away and distribute them to friends as a public duty. However it's done for the price I can't see. Look here, pack up every blessed book you publish, and let me know how much you want from me.

Publisher.—Thank you, Sir; always ready to oblige. You see, we publish our ANNUAL as an advertisement.

F. CARL,

154, Fleet St., London.

Moulting and Colour Feeding.

By A. BROWN (Gateshead).

A Lecture delivered before the Darlington Cage Bird Society on May 29th, 1907.

Mr. Brown expressed the pleasure it gave him in responding to the Society's kind invitation to come amongst them and give his experience in moulting and feeding. Colour feeding was a most interesting process, and was very popular, as one could see by the number of fed birds benched every season, and a fed bird always seemed to catch the eye in preference to the natural coloured bird. Some fancier might say, "Look at the extra cost." Well, colour feeding did cost a bit more certainly, but it was not expensive. Put up three or four birds to colour feed, and three or four non-fed, and see which birds would produce the best prices if you wished to sell them, and which would be the quickest to be bought. With careful feding, the birds only cost about 6d. each to feed well.

COLOUR FEEDING NOT INJURIOUS.

Colour feeding is not injurious to the health of the birds; in fact, you will always find a fed bird in a more vigorous state of health during the moult than a non-colour fed. The anti-colour feeder says that it is a system of faking. Well, all he could say was that it was not faking any more than was carried on in other branches of the Fancy. The poultry fancier cannot win without some preparation of his stock. The dog fancier must groom and get his stock into condition if he wants to win, and the same applies to the exhibitors of horses; even the horticulturist must prepare beforehand. Colour feeding was not faking, and if feeding was done away with faking and staining would increase. Colour feeding is simply an agent to bring out the colour possessed by the birds, and if your stock did not possess the foundation of colour you could not make them good by simply colour feeding. The birds that carry a good natural colour are those who make the best birds for colour feeding. The pepper used in colour feeding is a vegetable, and I had hoped to have had some specimens with me, but these had not arrived when I left home. Always use the cold pepper, with about ¼ lb. of hot to each 1 lb. of cold. To each egg use its own weight in either bread crumbs or biscuits. If you use up the crusts of bread from the table put them in the oven and dry well, then put through the egg mill. Food made this way keeps sweet longer than by simply cutting from a loaf of bread; it also mixes better with the egg and colour food. To each egg I add two teaspoonfuls of soft sugar. Do not give the birds too much of the colour at start, but gradually increase the strength as the birds break into moult.

A USEFUL HINT.

Do not put maw seed amongst your food, as the birds pick about for it, and throw a great quantity of the food upon the floor of the cages and waste it. Put the seed into a separate vessel, and remember that a little food and often brings birds out better than a pot full only once a day. One teaspoonful for three birds is the quantity I generally use, and I fill up the earthenware egg drawers every night, and again at breakfast time. For young birds commence feeding about ten weeks old for the earlier rounds, and seven to eight weeks for those hatched later. A very good guide for adult birds breaking into moult is for fanciers to mark the date of the time birds were hatched if their own breeding, and, if purchased, to enquire of the breeder the date hatched, as I generally find they begin to moult their adult plumage very nearly to the date on which they were hatched. This knowledge prevents the breeder being let down by the birds breaking into moult before they were expected, and being patchy in colour. Always try and get your birds a good colour down the sides and thighs, as this often catches the judges eye quicker than one that is very hot in front and top, but fails on sides.

TESTING COLOUR FEED.

I cannot recommend any particular maker's feed; you must just test for yourselves, and the one giving you the best results is the feed to stick to. Choose a rich red pepper in preference to the dark, as I generally find the dark brings out a bricky colour. To test your pepper place a pinch between two sheets of blotting paper and put into a press or between two books, and select the one producing the richest colouring on the papers. Don't give your birds too much pepper, as you will not get any better results, even if it was half pepper and half egg and biscuits. Try to find the medium mixture. Should your birds be slow in breaking into moult, get threepennyworth of saffron at the chemists, put it into a wine glass, fill up with hot water, let it stand all night, then strain off, put into a bottle, and add ½ oz. of spirits of wine; this acts as a preservative. Cork up, and use with the drinking water, using sufficient to turn the water slightly amber coloured. For a colour fixer do not use sulphate of iron, as is so often recommended, as this is not fit for cage birds, being too harsh. I always use citrate of iron instead. Put a few drops into the water. Use it only towards the close of the moult, and about three times a week, and not every day.

SEED DURING MOULT.

Do not keep the seed away. I use a lot of dandelion seed, and give plenty of shepherd's purse, which, I find, is beneficial. When sheeting down, don't smother up your birds with brown paper, with only sufficient light for them to see the seed and water pots. This method may be all right for the catchers to get their call birds through quickly, but light and fresh air are essential for Canaries. If you shade your windows, that is all that is required. I generally moult my young birds in the flights, and use rough pine sawdust on the bottom of the cage. I let them have plenty of baths. If you use sand on your flights, your birds get their feet clogged up and tail and flights dirty, and then they require washing before sending off to the show. When the birds are getting well away with the moult, cage off what you think are the most promising into two or three in a cage, and these you can then give more attention to. Don't be in a hurry to rush out your birds to the early shows; let them get well finished, and fined off. You can never get the polish into them if you have to hand wash before they have properly finished moulting. Keep your show birds on colour feed up to the end of the show season, as occasionally they come back home with a few feathers knocked out, and then, if not on feed, they show patches just at a time when most wanted for the bench.

"STUCK IN THE MOULT."

If you should have birds that seem to stick in the moult, procure some cochineal and put into a cup, pour some boiling water over, stand all night, strain off, and give the liquid to drink. This will cause them to drop their feathers very quickly.

I do not favour the colour feeding of British birds. I am more in favour of plenty of Nature's products for them, such as the seeds of shepherd's purse, plantain, dock, dandelion, etc., and the bath. These will get your British birds into a good bloom and colour, and beat colour feeding for them. Now, Gentlemen, this about brings me to a close, and if there are any points I have not made clear, I shall be glad to reply to any questions you may put, and I thank you all for the very close attention you have given me.

Mr. Allan: Do you recommend using egg cake?

Mr. Brown: No; I prefer fresh eggs and the biscuit. Egg cake, flake yolk, and other preparations are handy if the breeder is pinched for time to make fresh food; but I find the best results from fresh eggs.

Mr. Brunskill stated that he used to mix the egg and biscuit and colour food, and put into lever-top pickle bottles, and this kept sweet and fresh for several days, as the colour food acted as a preservative.

A few other questions were put, but Mr. Brown had gone so thoroughly into the subject that there was very little left unsaid.

At the close, Mr. Brunskill proposed a very hearty vote of thanks to Mr. Brown for giving the members such an excellent and instructive discourse on feeding and moulting. It was one of the most interesting papers the members had had the pleasure of listening to, and there was much for both the novice and the more expert members to profit by, and in asking Mr. Brown to accept the thanks of the Society he expressed the hope that they would again have the pleasure of Mr. Brown's company, and could assure him of a hearty welcome.—Mr. R. Todd seconded.—Mr. Brown thanked the members for their kind remarks and attention, and hoped all present would have a successful season, and he would have great pleasure in giving a silver medal for the best colour-fed bird shown by a member at the Open Show.

Powers of Flight.

Hovering appears to be the simplest form of flight, and the easiest. The Sparrow Hawks, Kestrels, Larks, Terns, etc., are able to execute this feat in almost any weather. Hawks prefer a fairly strong wind; the Lark and some of the small birds hover best when the air is still. When hovering, the edge of the wing cuts the air like a knife, for birds always face the wind when performing this act. A Kestrel will come down wind, and turn sharply, return part of the way, and will stop poised in the air, his quick eye having detected some small rodent as he passed by. When a bird flies against the wind the action of the air on the outstretched wing always appears to me similar to the effect upon a kite—the wind strikes the under part at the top edge, glides down the exposed surface, and forces the object upwards. In this manner some large birds will soar to a great height; this they do in a spiral manner, and with hardly a perceptible quiver of the outstretched wing. It is generally done in a moderate breeze, and cannot be performed during a calm. Sometimes we are astonished to see a Hawk or Gull soaring in what to us appears a dead calm; the explanation is that an upward current of air will often be felt upon the windward side of a hill or cliff. Although flight appears natural to birds, young ones are some time before they are able to fly any distance; their first efforts are no more graceful than the initial toddling of an infant.

THE BORDER FANCY CANARY.

By JAMES MACKIE.

Paper read before the Edinburgh Western Ornithological Society, February 7th, 1907.

(*Continued from page* 233.)

I will quote from an article on this particular point, written by one who should know —CAGE BIRDS' Border expert—who gives a full and clear statement, and if you follow the reading closely you will see from what source the colour of your class comes from. He writes:—

"Most shows provide a class for them, but I am sorry to say they are in most instances very poorly filled, and unless breeders pay more attention to them we may see these beautiful birds thrown out of the schedules at the smaller shows. No bird to my mind has such a striking appearance as

A GOOD GRASS GREEN BORDER,

provided it be level in colour, distinct in pencilling, and not showing any bronze on wings. The latter point is one where many good birds fail, many show a tendency to run light in throat and down towards the vent. All these blemishes have to be avoided in breeding Greens, and birds with such must have strict attention paid to their mating. No two birds showing the bronze tint should be put together; if you have a bird showing any tendency to the above fault and which to your mind is equal in type and quality to your ideal, it is a pity to discard such altogether from your Green strain. I have found that such a bird is very useful when paired to a heavily variegated bird with a dash of Cinnamon blood established in it. You may not get all Greens the first cross, but by pairing the progeny back again to a good Green you will find you will have got rid of the greater portion of variegated, and also get more quality of feather, and greater depth of colour. You will find, too, that the bronze tint in most of the young has entirely disappeared. Select the most typical and best coloured, and the one showing the pencilling most prominent down the breast, as by crossing in the variegated has a tendency to go light in the throat and breast. Pair back again to a bird bred from double Greens, and you may now hope to have a fair amount of the Grass Greens. Some breeders also believe in double buffing one pair for a season also, to tone down the bronze. Although sometimes successful I do not care for this method, as you always lose a great amount of colour with double buffing Greens. Speaking about the Buff Greens opens a vexed question with reference to breeding and exhibiting them. We see very few Buff Greens shown, and where they are on view it is seldom they get in the tickets.

Most of the judges go for Yellows. This, I think, is a great mistake, for, although they have not so much colour, nor are they so pleasing to the eye, they are in many instances more typical, tighter in feather, and not so leggy as many Yellows which win. I always hold out that where a class is simply Green, not stating for Yellow Greens only, that the Buffs should have as much consideration shown to them as in other varieties.

Green breeders at present, it must be confessed, are few. There is not the slightest doubt that the Greens take up a great amount of time, and require careful attention; one has nearly to give up the other varieties—that is to say

THE AVERAGE FANCIER,

who has only his spare time in which to attend to his stock, will require to do so if he wishes to be successful with them, as they are very little use for introducing into marks or clears. A breeder must have at least four pairs to keep him in stock, so as not to run them too sib, and even with these he has great difficulty in keeping from inbreeding, and must be buying every year to avoid it. Introducing fresh blood into your stock so often (unless you have any particular friend of whose stock you know the full pedigree) is frequently disappointing, as the blood does not blend, and leaves you many times at your wits' end how to get rid of it again.

The same applies to the Cinnamon, another variety very much neglected, but which, I believe, has now taken the fancy of a fair number of breeders; we may at some future date see them with a class allotted to themselves. They are at present always shown among the Greens, which is fair to neither one nor the other. I find them most useful for toning the feather where there is a tendency to a little coarseness either in clears or marks; indeed, there is hardly a bird in my room which has not a large infusion of Cinnamon blood well established, and I have never found any bad effect from its use, so can confidently recommend it. I find it produces the nice, close, silky feather so much sought after, and which we all admire.

These two varieties of the Border are really the most suited to the Town breeder, and are at present somewhat neglected; consequently from a beginner's point of view they afford brighter hopes by success than with the other varieties.

"COLOURING AGENTS."

A lecture was given by Mr. F. W. Harris on the above subject to the members of the Coventry O.S. on May 29th. Mr. G. Peters presided.

The lecturer's main efforts were directed to showing the relative strength of various colouring agents, by dissolving tests, etc., and he had quite an array of bottles and samples. He opened by saying that madder, although one of the weakest vegetable colouring agents, owing to the difficulty of the birds taking a sufficient quantity, yet was much stronger in colouring matter than marigolds, which he considered very poor in colouring properties. Anatto was a stronger agent than madder, but the same difficulty of concentration and absorption by the birds presented itself, and it was in a general way only used for colouring cheese, butter, and fried fish. Saffron was a better colouring agent, but much too expensive, and was used more medicinally than for colouring, it being both a cordial and exhilarant. Cochineal, the properties were colouring only, but was so far the best, its great cost being the only bar to its use.

"K.N." hot he considered had less colouring properties than cold pepper, and apart from the injurious effect "K.N." had on birds, recommended the use of cold pepper, as being more efficient for colouring, and remarked that cold capsicum pods are a food, and are called "bird pods" in a botanical work, published as early as 1857, fourteen years before the advent of "K.N."-fed Canaries. How "K.N." came to be used in sufficient quantities to colour Canaries may never be known, but it is not beyond the bounds of probability that its use was suggested by such a name and work.

After various remarks and experiences had been given by Messrs. T. Gilbert, G. Lawrence, Waring, and G. Turrell, an evening well spent was brought to a close by a hearty vote of thanks being accorded to Mr. Harris for the trouble he had taken in presenting the subject to the Society.

ESTABLISHED 102 YEARS.

HINDHAUGH'S

'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 12/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by goods train.

We quote as follows on rail Newcastle:—

"SAMPLE A"

Finest obtainable Re-cleaned Spanish Canary Seed, 10/- per 56 lbs., 2/9 per 14 lbs. *(Bag free.)*

Carriage if by passenger train (payable by buyer) is only :—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles :—7d. for 14lbs.	11d. for 28lbs.	1/9 for 56lbs.
100 " " 200 " 10d. "	1/2 "	2/4 "
Over 200 any distance .. .. 11d. "	1/6 "	2/11 "

A Chat about Birds.

Some Simple Facts for Students.

A Lecture by the Rev. K. A. Deakin at the Redditch Institute on February 11th, 1907.

(Continued from page 397.*)*

Larks, and some of the Pipits, were noticeable for the extreme length of the claw on the hind toe. The Swift had a peculiar foot, all the toes being directed forward. Its legs were so short that when on the ground it is almost helpless. Woodpeckers and the Wryneck had two toes pointing forwards, and two backwards, to enable them to climb the trunks of trees. The Goatsucker had the middle toe prolonged, and the claw toothed like a comb. This bird fed on moths, beetles, etc., and it had stiff bristles on each side of the bill. In these, no doubt, the wings of the moths got entangled, and the "comb" was, in all probability, used for clearing them.

The legs of Waders were, as one would naturally expect, very long for the size of the bird. The feet of nearly all birds that swim were webbed, and when bringing the foot forward they closed the toes, so that the least possible resistance was offered to the water, while when used for propelling they were expanded to their full extent. He mentioned before that the Moorhen, whose feet were entirely without web, was an expert swimmer, while the Coot—an equally good swimmer—had its toes very curiously lobed. Grebes, too, had an extension of the membrane of the toe, making each toe very much resemble the blade of an oar.

The points of difference that he had been noticing were all external, but now he wanted to say a few words about one that was internal, but which was none the less very characteristic. He meant the steruum, or breast-bone, and the furcula, or—to use its more familiar name—the "merry-thought." A collection of these bones was very interesting and very instructive. He supposed that they had all noticed the great difference between the breast-bone of a chicken and that of a duck, when they had seen them on the dinner-table, and also between the "merry-thoughts" of the same birds. Well, of course, these differences—like all differences in nature—were not for nothing. If they were to look at the breast-bone of an Eagle they would see that it had a deep keel, and that the sides were wide. The breast-bone was very intimately connected with the power of flight in birds. The conditions necessary to produce this power in its fullest extent were large and strong pectoral muscles, great extent of surface, as well as peculiarity of form in the wing, and feathers of firm texture, strong in the shaft, with the filaments of the plume arranged and constructed to resist pressure from below. A certain degree of weight was necessary to flight, and this was imparted by large pectoral muscles, and the power of these muscles might be estimated by the depth of the keel, and the breadth of the sides of the sternum, as affording extent of surface for the attachment of those large muscles by the action of which the wings were moved. The furcula, which answered to the clavicle, or collar-bone, in mammals afforded a support to the shoulders. Hence it was that these bones were such as he had described in the Eagle whose great power and swiftness of flight were proverbial.

As they came down to the smaller birds of prey, the characters necessary to produce rapid flight declined gradually till they came to the Owls, in which the keel of the sternum was but of little depth, the sides were narrow, while the furcula was especially slender and weak. The buoyant, easy flight of an Owl was as great a contrast to the swift, powerful flight of an Eagle, as the sternum of the one was to that of the other. The feathers, too, were differently formed, which produces the peculiarly silent flight so characteristic of an Owl, and so essential for its noiseless stealing upon its prey. And so with regard to all other birds, they found modifications of the sternum according to their power of flight, till they came to the swimming birds, with their sternums with shallow keels, but broad sides, almost like the bottom of a punt, enabling them to float on the surface of the water.

THE BEAUTIES OF NIDIFICATION.

A chat about birds would be scarcely complete without some reference to their nests, and these were, said the lecturer, almost as various as the birds themselves. Some birds —the Goatsucker, for instance—made no nest at all, but contented itself with simply scratching a slight hollow on the bare ground. Many of the Gulls and Waders laid their eggs on the bare shingle, while the Guillemot laid its single egg on the ledge of a rock. The Plover slightly improved on this by lining the depression in which it made its nest with a few bents, and, on leaving the nest, covers its eggs with water-weeds. The Tawny Owl contented itself with a hole in some hollow tree, without troubling to make any nest in it, while the Starling—which was also very fond of a hole in a tree—made a nest of a little hay and straw, with the addition of a few feathers. The Woodpecker made no nest at all, and, after having laboriously hollowed out a hole in which to lay its eggs, a Starling would often carry in a few straws, when the Woodpecker left at once. Many other birds—the Redstart, the Tits, the Nuthatch, and several others—made use of holes in trees, in which they constructed warm and cosy nests, well lined with hair and feathers. The Wood Pigeon and Turtle Dove made platforms of dead twigs so loosely put together that it was often possible to see the eggs from below; while the Grebe made a heap of water-weeds in shallow water, and laid its eggs on the top, scarcely above the level of the water.

In striking contrast to these were the wonderfully beautiful nests of some of the smaller birds, which, if not so curious as some of the hanging nests from South Africa and other countries, were yet things to fill them with wonder and admiration. He had only to mention such nests as those of the Chaffinch, the Goldcrest, and—above all—of the Long-tailed Tit, as instances of beauty, while the domed nest of the Magpie, and the mud-built home of the House Martin, were equally wonderful.

The Nuthatch (which he mentioned as building in a hole in a tree) filled up the opening with stiff clay, leaving only an aperture sufficiently large for its passage in and out. There was a specimen of the nest of this bird in the British Museum which was made in the side of a hayrick, and is practically a lump of hollow clay, and weighs no less than eleven pounds! When they thought that this was the work of a little creature weighing not more than an ounce or two, it seemed to him that it must read them a lesson of perseverance which they would all do well to imitate. The Sand Martin, with its weak bill, managed to dig out a deep hole in the sides of a sand pit, or cutting, often quite inaccessible even to the school-boy; and the Kingfisher, too, made its nest of ejected fish bones in a similar hole, often, however, taking possession of a burrow of a water rat.

A LOVE FOR THE EXTRAORDINARY.

Some birds seem to lay themselves out to choose extraordinary and out-of-the-way places for their nests. The common Wild Duck has been known to make its nest, and hatch out its young, in a tree at least thirty feet from the ground. The Spotted Flycatcher has a great liking for the hinge of a door; while inverted flower pots, letter boxes, pumps, and even empty pickle bottles seemed to have a great charm for the Great and Blue Tits. Perhaps the most curious site for a nest which had come under his own knowledge was that of a Redstart, which actually selected the pocket of a scarecrow as a convenient place in which to rear its young.

These they might call artificial sites; but there were birds which they found invariably nesting in places in which they would scarcely expect to find them. The long-legged Heron seemed rather out of place rearing its young among the tree-tops, as they might see them in the heronry at Ragley Park. Another of the waders—the Green Sandpiper—unlike all its relatives, took to the trees for breeding purposes, and its eggs were often laid on the old nests of other birds. It did not, however, breed regularly in this country, though it was said (but this seemed to require some corroboration) to have done so in Yorkshire. The Sheld-duck and Puffin nested in holes in the ground, not infrequently turning out the original owner, the rabbit: and the Golden-Eyed Duck (which, however, did not breed in this country) had a stranger habit still of nesting in a hole in a tree, a fact of which the dwellers in Lapland did not fail to take advantage, for they placed boxes, with a hole in the side, in the trees, and in these boxes the birds freely laid their eggs.

NEST DESTRUCTION.

Take whatever nest they might (of course he was not speaking then of those he mentioned as being only a hollow scratched in the ground), it was impossible not to be struck with the wonderful cleverness with which the little architect had been endowed, and it was, indeed, a pitiful sight to see, as one so often did, the result of so much care and labour lying torn and useless by the roadside. Though an egg collector himself, he hoped he might be allowed to say that it was impossible to reprehend too strongly such wanton destruction, and, though perhaps to some of them it might sound somewhat paradoxical, he believed that the real egg-collector—he need not say, he supopsed, that he did not now refer to those who took eggs wholesale for the sake of profit—was almost invariably one of the best bird preservers. *(To be continued.)*

Wars and Rumours of Wars.

By A. C. SELF.

Never were such times since Nelson died! Whatever has come over this erstwhile quiet and not-easily-moved district? I am speaking of Ilford, Seven Kings, Goodmayes, and that vast area of the "just beyond," which has been roused from its ultra-snobocracy and turned into a seething cauldron of fierce debate and controversy. Wherever one turns one hears of nothing but bird breeding and questions as to what is an "amateur" or "novice." In the clubs, in the bars, in the street, outside churches and chapels, meeting halls, doctors' shops, and undertakers, there is a continual, and in many cases belated, hum of conversation on the now universal topic of Canary breeding. Of course, I very soon caught the infection—in fact, I walked open-armed into it.

Right outside my abode there was gathered a round dozen of my neighbours evidently just finding their way home from the aforesaid "excuses for being detained in the City on business." The subject under discussion had evidently become so hot that it had deprived them for the time being of the means of locomotion. Had they proceeded a few paces further it is just possible I should still be ignorant of the cause of this unwonted excitement. But, as I have already stated, they came to a standstill immediately outside my house. Now, as a rule I retire at a respectable hour (unless in my turn I am "detained in the City on business"), and at this very time I was wooing sweet Morpheus—perhaps a trifle unsuccessfully, which accounted for my churlishness. Therefore, in words perhaps more forcible than polite, I asked them what the, etc., was the disturbance, and why they could not, etc., engage a hall for their discussions instead of annoying respectable people at an hour when none but Owls and Bats hold their meetings. And then, reader, came my enlightenment. Then the mystic veil was lifted. With one accord they almost flew at me. "Ah! you can settle this question for us, can't you?" Of course, I said that I would try if they would tell me what it was. And if you will believe me I would have told them anything just at that moment, if it was only to get rid of them.

If appears one or two of the company had made up their minds to go in for CAGE BIRDS breeding competition, and had been canvassing their friends to give their testimony of the genuineness of their statements that they were really novices. In their haste to get these signatures they had held forth in such glowing terms of their chances of winning a prize that they had enthused their friends, who also came to the decision that they also would start the hobby—especially when it was made so easy for them, for all they had to do was to buy CAGE BIRDS, study it carefully, buy a pair of birds, and win a big prize. What could be easier? But the point which was troubling them was whether they could sign for each other. I told them I thought they could, thinking to thus get rid of them and once more retire to rest and oblivion. But no, I had reckoned without my host. Several of my interlocutors knew Canary breeding was a hobby which I had embraced with a certain amount of success, and they plied me with question after question until they had perforce to cease for very want of breath. When I could get a word in edgeways I told them that to answer all their questions would take me until Christmas, and as I had a few pairs of birds to feed between now and then I could only refer them to the aforesaid CAGE BIRDS and CAGE BIRDS ANNUAL, where they could get all the information they wanted and more besides; that they could also "take it lying down," as I wanted to do at the time. This seemed to satisfy them, for they separated, each with a determination of outdoing the other in their new-found hobby. To say that I wished them luck would be a mild expression of my wishes—I wished them to—never mind, it is all over now, and it is quite hot enough here just at present. However, since that night I have met several of my friends and have made amends for my churlishness, for, after all, if one has a hobby he loves to commune with kindred souls.

Talking about hobbies, is it not strange that this desire to take up a hobby should attack one, as it were, in the springtime? Some take up one thing, some another—gardening, photography, fowls, etc., etc., but can any hobby compare with that of Canary breeding? The gardener gets all his enjoyment in the summer time; so does the photographer; so does most of the other votaries of the god "Hobby," but the Canary breeder gets his enjoyment all the year round. In the dismal days of winter he has the song of his pets to make him almost ignore or forget the biting cold, the dreary days and long, cheerless nights. Their music is like bottled sunshine, their company breathes of cloudless skies, mossy banks, and makes one feel at peace with all the world. And in encouraging this best of all hobbies and making it more popular with the community at large CAGE BIRDS has rendered a great service. That this service is being appreciated can readily be seen by the increasing number of people one meets in train and 'bus eagerly conning the pages of this most popular orgau of the bird fancy every Friday morning. I hold no brief for CAGE BIRDS, but feel it my duty to do my share to repay, perhaps in a poor way, the thousand and one helpful hints this paper has given me. And now, Mr. Novice, it is trying to help you—£28 is offered in prizes, see particulars on another page. Go in and win; or, if you do not win, try, and next year you will be as enthusiastic in the pursuit of your hobby as the writer of this short article.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

* * The Proud Goldfinch.

I think this bird is the proudest and the most beautiful I have ever seen. The way he flies from perch to perch in the aviary, in the most graceful fashion, displaying to perfection the yellow bars on his wings, is very interesting, and truly, as Mr. Rudd says, he is "An aristocratic little gentleman." We have one flying in our aviary in the garden, with a dozen hen Canaries. It is my work to clean out the aviary, and the birds do not seem alarmed at my presence. When I put a little hemp and teazle seed down, he sings and shakes himself with pride, and if any other bird goes near his beloved seed he proudly drives it away. —ANNIE PICKERING (aged 13 years), 178, Victoria Street, Chadderton, Oldham.

* Albino Blackbird.

'A gentleman caught a splendid Albino Blackbird on December 23rd. He exhibited it at Chirnside on January 1st, where it won first. It is a cock bird, with rare amber-coloured bill and bright eye ceres. His head and neck are whiter than the rest of his body. The inner flight of wings are also white. My father bought him for us, but he lost half of his tail in coming. We have turned him into our Pigeon loft, and feed him on Hyde's Lark Food, a few currants, and a few earthworms, and he appreciates all of them. We have also a pair of yellow Budgerigars, which are sitting on eggs, also a Siberian Goldfinch, which have all won on the show bench, and if the Blackbird lives he will be another of the team of Patterson Brothers.—GEO. PATTERSON (age 13), Chirnside.

* The Jackdaw.

We have had our Jackdaw for about eighteen months, and I am sure we would be sorry to part with him now. It is most amusing to watch his quaint ways. At first we were afraid of him leaving us, but now he flies about the neighbourhood, and we have no fear of his going away. Our Jackdaw is very sly in his ways. He hops about slowly and quietly, and then suddenly he will make a spring at something, especially if it he anything bright, and off with it, just as though we were after it. With training he talks a little; he can say "Jackey" quite plain.—J. G. Thompson (age 10), 21, Challoner Street, Cockermouth.

A Canary.

One day my father went up to feed his birds, and when he came to the cage of a yellow hen Canary he found the bird in the bottom of the cage. He brought it down into the warm house, and found out that its leg was broken in two places. He then said to me that he was going to destroy it, because it would never get better. I persuaded him not to, and we put it in a cage with its food in a glass, and hung it up in the house. In a fortnight it was up on the perch again, and in the best of health, and able to go amongst the other birds.—CHARLES EDWARD HALL (age 13), 21, Brownhill Avenue, Leeds.

Cruelty and Kindness.

The other day my sister saw some cruel boys throwing a poor little Sparrow up in the air. She went out and took it away from them. It was not dead, but stunned. As we keep birds, and have a Linnet, we put it in with the Linnet. Then we gave the Sparrow something to eat and drink, but in the evening we found it dead.—H. R. MARTIN (age 14), Pleasant View, Dunton Green, Kent.

The Weaver Birds.

The Common Weaver is found in India in well-wooded places, where it feeds on grain and the seeds of grasses. It receives its name on account of its strongly-made nest, of interwoven blades of grass, hanging from the boughs of trees, most beautiful in form, being long and well-shaped. The Sociable Weaver is found in Africa. The nest of this bird often contains several hundreds of cells, surrounding a whole tree, and requires a cart and several men to remove it.—M. PALFREYMAN (age 11), Crook's Cross, South Molton.

Use our Picture Postcards.

WILD BIRD LIFE

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "The Eyrie," Salisbury-road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

A Note on the Cuckoo.

We are now in the leafy month of June, and we may still hear the note of the Cuckoo mingling with the songs of the Finches and Warblers. To-day he was calling vigorously, the sound coming with the wind from the woods as clear as it does in the early spring days. Although it was so strong and clear, yet occasionally he would repeat "cuck" "cuck" twice before finishing his full note, and in one case he sounded it four times. The cry sounded very strange, and could hardly be recognised as part of the bird's song. We shall probably hear him for another week or so before he departs across the seas, leaving the young ones to follow in the autumn. There is, apparently, no reason why the old Cuckoos should not stay with us as long as the young ones do, for if these can stand our changeable climate until the month of September, as many of them do, the old birds could surely do the same; but they evidently just wander over here, deposit their eggs in the nests of smaller birds, making use of them to rear their greedy offspring, and then depart, apparently quite careless as to the welfare of the youngsters.

The Red-backed Shrike.

Bird lovers cannot but notice that many birds frequent particular districts, and are not to be found in others which, in our opinion, are quite as well suited to their pursuits and requirements. In the Red-backed Shrike we have a striking example of this habit, for these birds are singularly local. I know spots in different parts of the country where this bird is to be found nesting year after year with certainty, and, if unmolested, the same bush will be chosen for the site of the somewhat bulky home. This Shrike is a bird that shuns the moors and uplands, for he loves the rich-cultivated valleys—the open country more than the wood. He delights in the tall, straggling hedgerows dividing the stretches of meadow or cultivated land. In some places an old disused chalk-pit, overgrown with brambles, wild woodbine and a few strong-growing thorn bushes, is his chosen haunt. Such places are warm and dry, wild flowers grow in abundance, and big bees drone lazily by. These form a considerable portion of his daily food. The habit of the Butcher Bird partakes largely of that of the Flycatcher, and, like that bird, he no sooner arrives among us than he is at once detected, for he is seen perched on the topmost branch of the hedgerow, the stump of an old tree, or the gate post leading to the meadows, and from one of these commanding positions he is able to see all that is going on, and to flutter into the air after some passing beetle or bee. Occasionally a small bird ventures too near, and the larger Hawk-like creature pounces down upon the unfortunate one and beats the poor little fellow to death with his powerful hooked beak. Sometimes we may see him flutter down to the ground and search among the rank grass for the larger insects, or possibly some small field mouse. During his stay with us this bold bird can have no difficulty in procuring food. Half-fledged birds are

The Red-backed Shrike.

plentiful, and he can easily find nests full of callow young ones. His short wings do not fit him for the chase; he is unable to fly down and capture his victims in the manner of the Hawk; but he is, if anything, more dangerous than the larger bird. Many small birds wander unconsciously close to him, or allow him to mix freely with them. He comes upon them unawares, capturing the wounded or weakly.

The most interesting habit of the Shrike is that of impaling his victims upon the thorns of some handy bush. This is no doubt done for the purpose of tearing it to pieces, for the legs and feet of this bird are not sufficiently powerful to hold its prey. Although the Shrike generally has some particular spot which one might designate its larder, the observer may often meet with evidence of his doings along the hedgerow, and, if followed up, will generally lead to the finding of the nest.

Notes and Queries.

A Fondness for Letter-boxes.

A Blue Tit has built her nest in a letter-box belonging to Mr. J. Scarle, in Wood Lane, Long Sutton, Yorks, for the fifth year in succession. The bird has thirteen eggs this season, and up to the present has already successfully reared in the nest in this letter-box no fewer than 43 birds.

The Lapwing's Weird Ways.

The wild, weird ways of the Lapwing have somewhat abated. He has courted and nested, and his mate is now busily tending the downy chicks in the fast growing corn. Approach the haunts of the hird, and he quickly takes wing, rushing upwards with swift wing beats, turning sideways with one wing pointing to the sky, exposing the whole of the back and outstretched wings; the next instant he has turned; now the opposite wing is uppermost, showing the underpart of the body; a quick transition from black to white; and so he continues rushing round the field at a great rate, meanwhile calling repeatedly, but a different note to that of the early spring. He is anxious for the young ones, hut he knows they are safer than the eggs were in the nest.

Bird Song in June.

In the month of June we get the sweetest notes from wild birds still in song. The passion of the spring is past, the birds sing now for very joy and gladness. There is no rivalry, no mad rush through the strain, breaking off halfway and finishing with a wild scream, as many of them do. The song as rendered now is slower and more tuneful, each note is full and round, and sung with deliberation and method. Get under a tall hedge and listen to the song of the Linnet, such round, full notes can hardly he recognised, so much do they differ from the hurried jerky music of the spring. The song talk of the Greenbird is a study in melody. Who says the Greenie has no song? Listen to him now in the month of June. His is a contented, pleasant trill, without much variation, 'tis true, hut delightful to listen to along the breezy hedgerows.

The Nightingale in Scotland.

"The Scotsman" prints an interesting letter, dated 1889, from a Lady Margaret Cameron, wherein she says, "A Nightingale was heard for three weeks, and also seen, during the month of June, 1889. Thermometer 90 in the shade in May. Very hot all May, June, and July, but cold and wet in the south and east of England." This is particularly interesting, as the bird of melody is supposed never to reach beyond York, but one is inclined to think there is just as much possibility of the Nightingale straying out of his course, as some of the rare birds which from time to time reach these shores as stragglers. The note as to the weather conditions would help one to think it might be a genuine case. Douhtless the lady was well acquainted with the song of the 'Gale.

Bird Sanctuaries.

By the efforts of protective societies and private persous, several real bird sanctuaries exist in the country, and in size they extend from half an acre of wood to miles of moorland aud seashore. Although our commoner birds are well able to hold their own, and need no protection beyond that of the law, yet many species of rare birds require the most careful watching, and as much seclusion as it is possible to give them. When a stretch of woodland is given up to wild hird life, it has been found that the larger birds are equally quick to take advantage of the facilities for nesting in security. Consequently, Hawks, Owls, Jays, and Crows increase rapidly, and these prey upon the smaller and equally interesting birds, so that unlimited protection comes as a mixed blessing. In the case of the Hawks and Owls they can be left to themselves, as they roam far and near, and are always running into danger, but with the Crow family it is another story. They increase rapidly, and pilfer the nests of eggs and young hirds in the immediate vicinity, so that hardly a warbler can be found in a small wood where a family of Jays or Carrion Crows frequent.

Advertisements continued from page 526.

WANTED—continued.

WANTED, Canaries, any number, weekly, for cash; write, stating full particulars and price, to J. Thorn, 37, Plumstead-rd., Woolwich. Telephone, 365 Woolwich.

WANTED, chicks or Canaries, or Goldfinches; cock Greenfinch Mule, big bird, 5/-; pair of riding trousers and leggings, 10/-; harmonium, 10/-, maker, Hiller, cost £9 9/-.—Long, 18, Prout-rd., Clapton.

SALE OR EXCHANGE.

Mainly British
To be Sold or Exchanged

SELL or exchange pair 1906 hand-reared Hawks; what offers?—Green, Stanley-st., Bourne, Lincs.

FOR sale or exchange, four good cock Linnets, for good pair of Norwich Canaries.—H. Hamans, 29, Willis-st., Poplar.

COCK Blackbird, 2/6; four hand-reared cock Chaffinches, 10/6; two-year-old Linnet Mule, 8/6; full song.—Smith, Jeweller, Kirton Lindsey.

COCK hand-reared Linnet, mule, 7/6; exchange hen Canaries or anything useful.—Winstone, 1, Victoria-ter., Dukes-rd., Southampton.

SELL or exchange anything useful; splendid dark cock Goldfinch Mules; good English history wanted.—Bennett, Southfield, Radstock.

LARGE cock Goldfinch and hen Bullfinch, mated, for good Yorkshire or Norwich cock, singing.—Patrick, 38, Doris-st., Ringsend, Dublin.

WILL exchange cock and hen Bullfinch for young Canary cock.—Whittaker, Old Vine Bridge-st., Newcastle, Staffs.

SALE or exchange anything useful for several pairs of Greenfinches, Chaffinches, Bramblefinches.—C. Chapman, High-st. South, Dunstable.

RICH coloured dark jonque Goldfinch Mule, full finch song, 7/6; will exchange him and give cash for Goldfinch or Linnet Mule, on pure Linnet song; approval; deposit.—Shepherd, 24, Penzance-st., Moorrow, Cumberland.

"CAGE BIRDS" GREAT

CANARY BREEDING COMPETITION.

A BOON TO THE FANCY.

£28 CASH IN PRIZES.

Two Sections: (1) NOVICES, (2) OLD HANDS.

1. Only Novice Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907 Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible. (Note definition of "successfully reared" given on Declaration Form.)
5. All stock birds used must be the *bonâ fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society; or may swear a declaration attested to by two responsible witnesses. Declaration Forms (see extracts printed below) are now ready, and will be sent any competitor post free on application; a postcard will do.
7. From now till the date of the **COMPETITION CLOSING, AUG. 17th,** each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

NOTE.—All entries must be sent in by August 17th.

EXTRACTS FROM DECLARATION FORMS.

For Competitors.

I, the undersigned, having entered for "CAGE BIRDS" 1907 BREEDING COMPETITION, hereby make declaration, according to the terms of the said Competition: (1) That this is the first season I have tried to breed Canaries; (2) That I have used this season .....*(state number)*..... Cocks and .....*(state number)*..... Hens, which were and are now *bonâ fide* my own property; (3) That I successfully reared* by August 13th, 1907, ...*(state number)*..... young Canaries entirely from the aforementioned .....*(state number)*..... stock birds, the said young Canaries being in good health on the said August 13th.

* By "successfully reared" is meant that the young birds are feeding themselves—that is, are requiring no assistance from their parents.

For Witnesses.

We, the undersigned, having read the Declaration of .....*(state name)*..... ..... of .....*(give full address)*..... hereby declare that, to the best of our knowledge and belief, the said Declaration is true in substance and in fact, we having seen the above birds and checked the stated particulars concerning them.

DECLARATION FORMS NOW READY.

PLEASE APPLY,

Canary Breeding Competition.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

SANDIFORD'S
FAMOUS
ROYAL RED.

Those requiring our famous colour feeds must order at once if you require our best Royal Red, which is guaranteed and been proved to be the best and finest in the world. Have already sold 4½ tons and supplied all our leading breeders and exhibitors. For success I will just point out the great last Crystal Palace Show. Here I give you details of every bird in the champion Norwich and Cinnamon classes. You will note out of eight 1st prizes seven were moulted solely on our Royal Red. In Cinnamon class every bird was moulted on Royal Red:—Clear yellow, Norwich, Class of 21—1st, 2nd, 3rd, 4th, vhc. Clear Buff, Class of 18—1st, 2nd, 4th, vhc. Tick. Yellows, Class of 19—1st, 2nd, 3rd, 4th, vhc. Tick. Buffs, Class of 20—1st, 3rd, 4th, vhc. Unflighted Yellow, Class of 30—1st, 2nd, 4th, vhc. Yellow Hens, Class of 20—1st, 2nd, 3rd, 4th. Buff Hens, Class of 25—1st, 3rd, vhc. Champion Cinnamon Classes, Yellows—1st, 2nd, 3rd, 4th. Buffs—1st, 2nd, 3rd. Unflighted—1st, 2nd, 3rd. Hens—1st, 2nd, 3rd, 4th. I have only pointed out the great show of the world.

All the following hold a stock of ROYAL RED.

Mr. Sam Cook, Manchester, June 15th, 1907, orders 70 lbs. of Royal Red, and says he got a splendid colour on his birds last season, and he won the Norwich Plainhead Club challenge cup and gold medal with birds moulted on Royal Red. Mr. W. Booth, June 15th, 1907, orders 14 lbs. Royal Red, 4 lbs. Hot. All the following been supplied this last three weeks:—Mr. Eckersley, Birmingham, 10 lbs.; E. Baker, who won three 1sts, 2nds, two 3rds at Crystal Palace, also four specials for best bird in show, got 112 lbs.; E. BOOKS.

THE HYGIENE OF BIRD KEEPING.
By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.
Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C.

OPINIONS OF THE PRESS.
LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."
COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

HARRY ALLEN.

Champion of all champions. I have the finest lot of Linnets ever seen or heard. Gentlemen, if you wish to have a successful breeding season, try one of my birds, as Sergeant Smith and Mr. Child, of Kirstall (besides many others), did. Both of these gentlemen have some fine young Mules to look at. I have some big fine well-pencilled cock Linnets, singing beautifully, been caged months, 3/6 each; extra picked birds, sure mulers, 4/- each; no rubbish, they are the pick of the season. I have some house moulted Linnets, singing hard, well pencilled, finger tame, sure mulers, 8/6 and 10/6; they are the biggest birds in Leeds, in fact, I have never seen bigger Linnets. I have two extraordinary good birds for either showing, muling, or contest singing, price 15/6 each, real honest birds. I have some specially trained Canaries, singing day and gas light, 10/6 and 12/6 each; hens, 3/- each; a beautiful Bramblefinch, finger tame, and fit for show, 3/6, honestly worth double; four packets of my special mixture, 1/-, all Linnet fanciers should try it.—"315, Shoreham-st., Sheffield. Sir,—Received birds safely, and am well satisfied. You may hear from me again.—F. Kenney to H. Allen."—"Carrali. Sir,—Received Linnet safe, and I am perfectly satisfied, and if I will be wanting more I will send to you.—J. Morgan to H. Allen."—"74, Prince Albert-st., Glasgow. Sir,—I received the Linnet, and beg to thank you most sincerely for such a fine big bird. He is singing splendidly already. I shall certainly recommend you to my fancier friends. Again thanking you for such an ideal bird.—W. Montgomery to H. Allen."—I have testimonials coming with every post. All my birds are on seven days' approval; state wants, as I have Linnets all the year round.—Harry Allen, 42, Brown Hill-cres., Harehills-lane, Leeds.

NOTE
THE FOLLOWING
PRICES
FOR
THIS WEEK.

1906 Norwich Cocks, 5/6, 6/6, 7/6, 8/6 up; Hens, 2/-, 2/6, 3/6, 4/6; Pairs for breeding, 8/6 up; Yorkshires—Cocks, 5/6, 6/6, 7/6, 8/6, 10/6 up; Hens, 3/6, 4/6, 6/6 up; Pairs for breeding, 9/6, 10/6 up; Cinnamons, 12/6, 15/- pair; Crests and Crestedbreds matched for breeding, 10/6, 15/-, 20/-, 30/- up; Crested Cocks, 6/6, 7/6, 10/6 to 40/-; Crestedbred Hens, 3/6, 4/6, 5/6 each; Feeding Hens, 3/- and 3/6 each.

1/9 / 3/9 } **1907** { 1/9 / 3/9

Pure Norwich or Yorkshire.—First round Cocks, 3/9, 4/6, 5/-, 5/6 each; Hens, 1/9, 2/-, 3/- each, or two Norwich Hens for 3/3; Pairs matched for next season's breeding, 5/9, 6/6, 7/6 per pair. These will grow into money.

Purchasers should do well to remember that all kinds of Cross-breds are sold as Yorkshires and offered at lower prices than it is possible to get pure-bred Yorkshires for, but not here.

For MY 6 months' approval terms send for particulars. This is not a mean, pirated or professional copyist advertisement; all birds here offered are **in my possession,** hence no delay and no three or four profits.

BORDER FANCIES.—Splendid stock, purchased owing to late owner going abroad, including some good evenly-marked birds. Particulars on receipt of stamped envelope.

GOOD FOR TWO ROUNDS YET

All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-.

These are the BEST VALUE ever offered.

Travelling Cages in all cases charged 3d. extra.

Read few following examples of satisfaction out of hundreds received during this month of June, 1907:—

47, Lavender-hill, Tonbridge, Kent. June, 1907. I should like to thank you for the pair of Norwich you sent me a few months back. No one could wish for a better pair. I have got seven young ones, and the hen wants to go to nest again. You could not have treated me better. My friends want to know where I got them from, and I am recommending you to all likely to want a good bird, knowing they will get such from you. One of my friends has already bought two hens and a cock from you since seeing mine. I am now wantiug a Sib hen.—W. Batchelor to W. Rudd.

Spaenhen, Kimworth-rd., Folkestone. June, 1907. Bird arrived in perfect condition. I am very pleased with it. He has sung so sweetly. I shall always for the future send to you when I want a bird. Thanking you for sending so quickly.—E. Bennett to W. Rudd.

Homewood-pl., Woodchurch, near Ashford. June, 1907. I am very pleased with the Goldfinch. He gives every satisfaction. He is a very good songster.—Mrs. Button to W. Rudd.

82, Leghorn-rd., Harlesdon. June, 1907. Birds arrived this day quite safe. I am very pleased with them. They are a fine pair. Many thanks.—G. R. Piper to W. Rudd.

The Lodge, Oak Mount, Northallerton. June, 1907. Many thanks for the buff Norwich hen. It is very good value for the price. I am highly satisfied with the same.—J. W. Hutchinson to W. Rudd.

30, Cambus-rd., Barking-rd., Canning Town, London. June, 1907. Birds arrived quite safe. Am awfully pleased with them. Wish I had sent to you before.—R. W. Godden to W. Rudd.

1, Wortley-lane, Leeds. June, 1907. I received the Yorkshire cock, and am very well satisfied with it.—A. Jackson to W. Rudd.

Church-rd., Llansamlet. June, 1907. Just a line to inform you the cage arrived safe and gives every satisfaction. Please send list of birds.—Wm. Rosser to W. Rudd.

Wren Nest Cottage, Glossop. June, 1907. The bird and cage arrived safe and in good condition. It had not been in the house half an hour before it began whistling. I shall have some more birds.—E. A. King to W. Rudd.

Rothesay. June, 1907. Hen to hand. Just what I was told to expect. Thanks very much.—D. M—— to W. Rudd.

Berwick. June, 1907. Received bird in good condition. Am very pleased with it. It has started to nest already. I shall certainly get what I want from you in future.—M. Turns to W. Rudd.

Milton, of Campsie, Stirlingshire. June, 1907. Kindly send one tin of Eggertine. I find it invaluable for rearing young Canaries. Enclosed find 2/6 for same.—J. Nicholson to W. Rudd.

15, Crescent-st., Grecnock. June, 1907. I received the birds this morning, safe and in good order. I am well pleased with them, and also your quick delivery.—Wm. Armstrong to W. Rudd.

30, Wharton-st., King's Cross-rd., London, W.C. June, 1907. Cage arrived, everything perfect. Thanks. Will send for some birds early in the week.—E. Thompson to W. Rudd.

8, Charlton-st., Widnes, Lancs. June, 1907. I received Cinnamon hen quite safe, and am very well pleased with same. She has laid three eggs and commenced to sit.—E. Beech to W. Rudd.

47, Owen-st., Eastou-rd., Bristol. June, 1907. Bird to hand safely. Many thanks for prompt despatch. Good value for the money.—A. J. Stone to W. Rudd.

2, Victoria-st., Newark. June, 1907. I received bird safely, and it gives me every satisfaction.—W. J. Fratt to W. Rudd.

Alloa. June, 1907. The light Mule arrived all safe, and I am highly satisfied with the same. Many thanks for your attention, and for sending such a good bird.—D. L—— to W. Rudd.

5, Mowden-st., Rose-gr., Burnley. June, 1907. I am more than pleased with the hen you sent me. She has gone to nest.—T. Lucas to W. Rudd.

Bewshaugh, Kicklden. June, 1907. I am sorry I have not written before to say I received aviary safely. I am highly pleased with it. I also find the Eggertine most useful in rearing young Canaries.—W. Hedley, jun., to W. Rudd.

Coastguard Station, Baltimore. June, 1907. Thanks very much for prompt attention to order. The seed is grand.—E. Southwood to W. Rudd.

17, Holmes-rd., Kentish Town, London. June, 1907. Birds arrived safe. Thanks for quick attention. Am pleased with the birds; one has started to nest already. Wish I had sent to you before, as the birds I have had from other dealers are no good. They must be worn out hens, although I paid more money for them. I like your style of packing birds for a long journey.—E. Flood to W. Rudd.

SONGSTERS! SONGSTERS!!—For Tutors or Cage Pets, fine collection of specially selected birds, 8/6, 10/6 up.

Easy payments by joining my Bird Club. Particulars free.

Full extended current Price List free on receipt of address, or my Amateurs' Guide (containing over 250 illustrations) free on receipt of three penny stamps.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size. The sale this season is phenomenal; never before has it been near so great, and this owing to its merit and merit alone.

W. RUDD,
THE Bird Specialist,
NORWICH.
Telegrams—"CANARIES, NORWICH."

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

"CAGE BIRDS" GREAT CANARY BREEDING COMPETITION.

A BOON TO THE FANCY.

£28 CASH IN PRIZES.

Two Sections: (1) NOVICES, (2) OLD HANDS.

1. Only Novice Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907 Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible. (Note definition of "successfully reared" given on Declaration Form.)
5. All stock birds used must be the *bonâ fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society; or may swear a declaration attested to by two responsible witnesses. Declaration Forms (see extracts printed below) are now ready, and will be sent any competitor post free on application; a postcard will do.
7. From now till the date of the **COMPETITION CLOSING, AUG. 17th,** each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

NOTE.—All entries must be sent in by August 17th.

EXTRACTS FROM DECLARATION FORMS.

For Competitors.

I, the undersigned, having entered for "CAGE BIRDS" 1907 BREEDING COMPETITION, hereby make declaration, according to the terms of the said Competition: (1) That this is the first season I have tried to breed Canaries; (2) That I have used this season .....*(state number)*..... Cocks and .....*(state number)*..... Hens, which were and are now *bonâ fide* my own property; (3) That I successfully reared* by August 13th, 1907, ...*(state number)*..... young Canaries entirely from the aforementioned .....*(state number)*..... stock birds, the said young Canaries being in good health on the said August 13th.

*By "successfully reared" is meant that the young birds are feeding themselves—that is, are requiring no assistance from their parents.

For Witnesses.

We, the undersigned, having read the Declaration of .....*(state name)*..... ..... of .....*(give full address)*..... hereby declare that, to the best of our knowledge and belief, the said Declaration is true in substance and in fact, we having seen the above birds and checked the stated particulars concerning them.

DECLARATION FORMS NOW READY.

Advertisers unable to obtain Postal Orders must remit an extra halfpenny with every four penny stamps.*

CLUB REPORTS.

BURY AND DIS. C.B.S.
Meeting held on June 11th. Mr. J. R. Greenwood presided. It was decided, owing to scarcity of birds, the arrangements for the First Feather Show be modified. Mr. Fallowes, of Bury, was appointed judge of Rollers. It was decided that last year's annual show arrangements, which were so successful, should be repeated in their entirety. These include a prize draw and a boys' drawing competition. The scheme drawn up for the latter is similar to that of last year, but there will be two additional classes for girls.
T. E. HOLDEN, Asst. Sec.

NORTHERN YORKSHIRE C.C.
Meeting held to make arrangements for the First Feather Show. It was decided to alter the date to August 3rd, this being the Saturday previous to Bank Holiday it was considered a more suitable day. The judge will be Mr. F. Armstrong, Halifax (late Sec. Yorkshire Union). It was decided to have five classes. The show will be held in the small hall in the Co-operative Buildings, Newgate-street. One of our vice-presidents, Dr. C. Duncan O'Neal, who was present, kindly promised us a valuable special for the best bird in the show. Other good specials are promised, so we seem as though we should have a good show.
T. C. CRAWHALL, Hon. Sec.

METROPOLITAN ASSOCIATION OF C.M. AND H.B.
Fortnightly meeting held June 13th at the Crown Hotel, Lavender Hill, S.W., when Messrs. J. Humphrey, E. Box and T. Beard were duly nominated for membership. Owing to the absence of Mr. W. H. Vale, who was to have given a lecture on Mules and Hybrids, Mr. T. Beard kindly offered to answer any questions on Mule breeding, which the members were not slow to take advantage of, and a long discussion ensued, in which Messrs. Lessels, F. J. Martin, A. J. Head, J. Humphrey, E. Box, etc., took part. Later in the evening we were honoured by the presence of our President, Mr. J. Tindall, when another discussion took place about the merits of some Goldfinches. Mr. Tindall kindly bringing two birds up for inspection. Will members return unsold admission tickets at our next meeting, June 27th?
A. J. HEAD, Hon. Sec.

LONG EATON AND DIS. C.B.S.
Meeting held June 15th. About thirty fanciers turned up. The passing of rules and other business was carried out without the slightest difficulty. It was then decided to call another meeting on June 29th, to commence at 6.30, for the purpose of fixing entrance fee and subscription, etc.
W. HALLAM, Sec.

WOLVERHAMPTON & DIS. C.B.S.
Meeting June 11th. The chairman, Mr. F. J. Weaver, opened the discussion on bird room management with a few well-chosen remarks on the position, cages, and utensils of the bird room. The discussion was then taken up by Messrs. Thomson, Willoughby, Mex-Jacquemin, Jones, Howes, and Hughes. Several very interesting points were raised which would no doubt prove beneficial to all present. One new member was enrolled.
F. HOWES, Hon. Sec.

SEAHAM HARBOUR C.B.B.A.
Meeting June 15th. The chief business was to draw up schedule for First Feather Show, to be held at Station Hotel, on July 13th. Mr. E. Tankard in the chair. Two new members were admitted, and a few minor items settled. Then the following schedule was drawn together:—Norwich 2, Yorks. 2, Border 2, Crest 1, Crestbred 1, Brown Linnet 1, A.O.V. Brit. Seedeater 1, Brit. Softbill 4, Hybrid 1. All present seemed well pleased with it. The meeting then adjourned until June 29th. All entries for show to be in on that night, when we shall finish all business for show.
J. M. NICHOLSON, Hon. Sec.

LANCASHIRE C.A.
A good number of the members of this Association assembled at Oldham on June 15th, when Mr. F. Steeple presided. A good deal of correspondence relating to applications for the L.C.A. support at the back-end shows was finally left over until some future meeting, in the meantime the secretary to procure from several applicants fuller particulars with regard to the number of classes, judges, prize money, etc. The next item on the agenda was the ringing of young Lancashire Canaries. This subject caused a good deal of controversy, and in the end it was unanimously decided that the L.C.A. do not entertain the idea of ringing young birds. Notice of motion was then given concerning a standard Lancashire show cage, and young bird classes at back-end shows. These last two suggestions will be discussed at the next meeting, which will be held at Middleton Show Room, Old Boar's Head Hotel, Middleton, on July 13th, at 7 p.m.
J. LONG, Hon. Sec.

WEST OF SCOTLAND NORWICH, &c., BIRD CLUB.
Meeting held June 6th, Mr. J. Young in the chair. The Annual Show will be held on December 7th, and judges will be nominated at next meeting. New members accepted:—Messrs. Jas. Anderson, M. Melville, A. Cant, and A. Duncan. The First Feather Show will be held on July 6th at four o'clock. The Association will give a medal for most points. Special by Mr. Young for second most points, special by Mr. A. Muir for third most points, and special by Mr. C. Campbell for fourth most points. Mr. Hunter will also give a special for most entries. There will be no entry fee, and members can show as many birds as they please, but the two highest in prize tickets will only be allowed to count for points. All new or intending members will be eligible to compete for these specials by paying half of their membership fee before judging starts. Copies of the new rule cards can be had on application. Mr. Campbell then proceeded with his lecture on the Norwich Plainhead, and it was highly appreciated by all present. Some fanciers travelled from Stirling, Hamilton, etc., to hear him.
GEO. SMART, Sec.

CRESTED CANARY CLUB.
A Circular to Members.
SIR,—At the Annual General Meeting, held at the Crystal Palace, February 9th, 1907, it was carried by ten to eight that the C.C.C. do become affiliated to the C.B.U. Owing to many members feeling that eighteen votes did not represent the club, over forty members requisitioned an extraordinary general meeting, which was subsequently held at the Napier, High Holborn, when it was decided unanimously that the aforementioned resolution be rescinded, and that every member be allowed an opportunity of voting on such an important question.

1. You are now requested to record your vote on the paper sent herewith according to the dictates of your own opinion, and I desire you to forward the same in enclosed envelope to Messrs. Heath and Clarke, 40, South Eaton-place, London, S.W. (the Club's scrutineers) not later than Saturday, June 29th, 1907. Any arriving after that date will not be counted. I most earnestly hope, whether you desire to join the Union or not, that you will not display the indifference of many clubs, as well as the majority of you at the Annual Meeting, but that every one of you will exercise your vote.

2. Another question upon which your opinion is requested is whether or not you desire that a closed ring be adopted by the club for the better identification of young birds competing for the Club's trophies.

3. Also whether or not you are prepared to adopt a plan for the registration of all birds bred by the members.

4. And are you agreeable that exhibitors, members of the club, be compelled to add the name of the breeder for insertion in catalogues to ensure breeders receiving the credit due for its production, and in a measure thwarting the practice of purchasing winners which are the means of selling the exhibitor's stock at more than a market value in consequence.
JOHN TYSON.

SCOTCH FANCY NATIONAL DERBY O.A.
Half-yearly meeting held June 10th, Mr. Wright in chair, and was supported by Councillor Hogg, the vice-president. The attendance was large, representative, and enthusiastic. A communication from Mr. Wright, of Edinburgh, was read, expressing his views on Mr. McKissock's application, and suggesting that the future meetings of the Society should be on a Saturday; not a single member supported the suggestion.—Mr. McKissock's letter was read, and the members appreciated the fine tone of it. They unanimously granted the application, on the understanding that Mr. McKissock's young Scotch Fancy Canaries continued his absolute property until after the Derby Show. Messrs. David Black and George Fulton were appointed a supervisory committee in connection therewith on behalf of the Association. The members are sorry to lose Mr. McKissock's fellowship; they reciprocate his kindly feeling, and wish him and his household happiness and prosperity in his new home. A report was submitted on the membership and cup fund, and Messrs. Wright, Hart, Porteous, and Smith were deputed to purchase the cup. The fund will remain open for a few months, so that any who have not contributed and may wish to share in it may yet have an opportunity of assisting, the desire being to have a cup worthy of the National Derby. The members were most careful in the selecting of the judges, and on accepting their names will be announced. Between twenty and thirty fanciers have given up the Scotch Fancy Canary, but the position has been conserved by a large accession of new members. It is expected the show on September 21st will be the best ever held. A hearty vote of thanks to the chairman and Councillor Hogg closed a most profitable gathering. The latter, in acknowledging the compliment, in his native humour told very telling incidents, which were much appreciated.
THOS. SMITH, Sec.

THE FIRST FEATHERS OF 1907.

BINGLEY.
Held June 15th. Mr. R. Garrett, Windhill, judged forty-eight birds in four classes. YORKS. YELL. (12): 1, Denby; 2, Dean; 3, Oddy; 4, Townley; vhc, c, Webb; hc, Wilkinson. BUFF (15): 1, 4, Wilkinson; 2, Barker; 3, Webb; vhc, Townley; hc, Holmes; c, Livesey. TKD. OR U.M. YELL. (9): 1, 3, Denby; 2, Livesey; 4, Barker; vhc, Smith and Son; hc, c, Barker. TKD. OR U.M. BUFF (12): 1, 2, Smith and Son; 3, Livesey; 4, Denby; vhc, hc, Walton; c, Dean.

HEBDEN BRIDGE.
Held at Lello's Dining Rooms on June 15th. Mr. R. Sutcliffe made the following awards:—YORKS. YELL.: 1, Astin Bros.; 2, King; 3, Greenwood. BUFF: 1, King; 2, Simpson and Son; 3, King. TKD. YELL.: 1, 2, 3, Greenwood. BUFF: 1, spl for best bird, King; 2, Spencer; 3, Harrison. CINN. MKD.: 1, 3, King; 2, Greenwood. NOR. BUFF: 1, 2, Pickles. CINN. BUFF: 1, Pickles. A.O.V.: 1, Harrison; 2, Spencer. SELL.: 1, King; 2, Greenwood; 3, Pickles. BRIT.: 1, Harrison; 2, Simpson and Son.

CUMBERLAND YORKSHIRE C.C.
The members of the above club held the first of a series of Table Shows for 1907-8 in the Foresters' Hall, Whitehaven, on June 5th. Entries fell short of expectations, owing to the cold weather experienced in the district. The first round amongst the members has almost without exception been a failure, but there is a decided improvement in the second. The birds staged were on the whole good, many of them could have done with a week or so longer to tighten up. Mr. Jas. Stewart's awards gave every satisfaction. CL. YELL.: 1, Joyce; 2, Irwin. BUFF: 1, Irwin; 2, 3, Myers. TKD. YELL.: 1, 2, Irwin; 3, Joyce; vhc, bc, Douglas. BUFF: 1, 2, Douglas; 3, Joyce.

KEIGHLEY AND DIS. C.B.S.
Held at the King's Head Hotel on June 15th. Mr. J. Bailey judged, and his awards gave entire satisfaction. The result for points was as follows:—T. Slater, 17 points; Morris and Shackleton, 16 points; Middleton Bros., 16 points; C. Spencer, 15 points; total entries, 89. YORKS. YELL. (9): 1, Smith and Sharp; 2, Middleton Bros.; 3, Ainsworth. BUFF (13): 1, Smith and Sharp; 2, Slater; 3, Ainsworth. TKD. YELL. (7): 1, Slater; 2, Morris and Shackleton; 3, Middleton Bros. BUFF (11): 1, Middleton Bros.; 2, Morris and Shackleton; 3, Slater. U.M. YELL.: (3): 1, Slater; 2, Smith and Sharp; 3, Morris and Shackleton. BUFF (6): 1, Slater; 2, Middleton Bros.; 3, Morris and Shackleton. FOUL MKD. (5): 1, Wright; 2, Middleton Bros.; 3, Berry. A.O.V. (3): 1, Slater; 2, Wright; 3, Groves and Shutt. SELL., 12/6 (8): 1, Morris and Shackleton; 2, Ferguson; 3, Clarkson. BRIT. BIRD (4): 1, Bancroft and Dean; 2, 3, Parkin. NOVICE, YELL. (4): 1, 2, Pickles; 3, Crowther. BUFF (7): 1, 2, 3, Spencer.

NORTHAMPTON.
Particularly successful this year was the Northampton Hand-in-Hand Cage Bird Society's Show of Canaries and Mules bred in 1907 and of British birds (any age). It was held June 15th at the Foresters' Arms, Wellingborough-road. The number of exhibits was in advance of last year. Mr. J. Robson judged. The Norwich section was the strongest in the show. It was the largest section, and the quality throughout was very good, and the shape excellent. Competition in each class was very keen. The Crest and Crestbred class was not large, but the winners of the first and second prizes (both Crestbred) were two very promising birds, with splendid head properties. Cinnamons were few in numbers, but of excellent colour. The British classes were both remarkably good. Many of these birds might figure creditably in any large exhibition. YELL. NOR. (6): 1, Nason; 2, Jeffs. BUFF (16): 1, Irons; 2, Jeffs; 3, vhc, Irons; hc, Swingler and Blackwell, Isom. TKD. YELL. (14): 1, Dickens; 2, Stockwin; 3, Jeffs; vhc, Kennes; hc, c, Hill. BUFF (22): 1, Swingler and Blackwell; 2, Jeffs; 3, vhc, Irons; hc, French, Hobbs. CREST OR C.B. (6): 1, 2, Mills; 3, vhc, Forman. CINN. JONQUE (1): 1, Nason. BUFF: 1, 2, Nason. A.O.V. (10): 1, Barwell; 2, Hill; 3, Nason; vhc, Hobbs; hc, Munday. SELL. PAIRS, 12/6 (5): 1, Dickens; 2, Brown; 3, Lane; vhc, Hobbs; hc, Moreton. SELL., 7/6 (7): 1, Dickins; 2, 3, Martin; vhc, Lane. BRIT. FINCH (21): 1, Barwell; 2, Stockwin; 3, Munday; vhc, Jeyes; hc, Barwell; c, Jeyes. A.O.V., SMALL (9): 1, Swingler and Blackwell; 2, Cooper; 3, Munday.

GRIMSBY.
A most successful First Feather Show was held by the above Society on June 12th in Slatter's Rooms. Considering the usual remarks on ill-luck, etc., we had a most satisfactory entry. The birds staged included some very bonny birds, some of which will no doubt be heard of again, especially Mr. Moore's yellow, which took the medal for best bird on the tables. Mr. D. Hope, of Hull, judged with his usual care, and his awards were considered most satisfactory. The special was presented by Mr. W. Johnson, through Mr. Robinson. This only goes to prove the good feeling existing between the rabbit and cage bird Fancy. And why should it not be so? NOR. YELL.: 1, spl, Moore, sen., splendid proportions, the right carriage, with very good colour, and although a shade small, will be heard of again; 2, Moore, sen.; 3, Townsend NOR. BUFF: 1, Moore, sen., good shape and quality; 2, Townsend; 3, Stubbs; vhc, Stubbs; hc, Townsend; c, Moore, sen. NOR. YELL., AMATEUR: 1, Medcalf, a topper, with plenty of size, which ran Mr. Moore's bird very close for the special; 2, Moore, jun.; 3, Robinson; vhc, Moore, jun. BUFF, AMATEUR: Mr. Crowston took all awards in this class with some bonny birds. NOR. YELL., NOVICE: 1, Johnson, a very nice bird, having just a shade too much the wrong side of the perch; 2, Emerson, a very decent bird, gone too far into moult; 3, vhc, Cotterhill. NOR. BUFF, NOVICE: 1, 2, Johnson; 3, Pett; vhc, hc, c, Cartwright. BRIT.: 1, Stubbs, nice Bramble; 2, Harmer, Thrush; 3, Moore, jun., Siskin. At the conclusion of the show a hearty vote of thanks was given to Mr. Hope for his services, and we were all pleased to see Mr. Calam there, who kindly acted as steward. A second Table Show is arranged for July 10th, when the same gentleman has kindly consented to judge. We are pleased to add that we enrolled four new members.

QUEENSBURY.
Held June 16th at the Granby Hotel, when some fairly good youngsters were staged. Mr. J. Dawson, Great Horton, gave the following awards:—YORKS., CL. OR TKD. YELL.: 1, Fowle; 2, Waterhouse; 3, Stocks; 4, Bramfit. CL. OR TKD. BUFF: 1, Swaine and Allen; 2, Smith; 3, Craven; 4, Tomsett. UNEVEN OR FOUL MKD. YELL.: 1, 2, Swaine and Allen; 3, Fowle; 4, Nickol. UNEVEN OR FOUL MKD. BUFF: 1, Fowles; 2, 4, Jagger; 3, Bramfit. A.O.V.: 1, 3, Swaine and Allen; 2, A. Mitchell.

WIBSEY AND DIS. C.B.S.
A very successful First Feather Show was held on June 15th at the Horse and Groom Inn, Wibsey. Mr. G. Stebbings judged, and gave every satisfaction. The quality of birds was excellent. CL. YELL. YORKS. (8): 1, Taylor Bros.; 2, 3, Chapman and Bateman; 4, D. Thornton; vhc, E. W. Johnson; hc, W. W. Ellerton and C. G. Ackroyd. CL. BUFF (11): 1, c, Taylor Bros.; 2, C. Bastow; 3, W. W. Ellerton; 4, S. Shaw; vhc, D. Thornton; hc, J. Hinchliffe. TKD., ETC., YELL (11): 1, c, S. Shaw; 2, G. H. Woodrow; 3, Chapman and Bateman; 4, hc, C. Bastow; vhc, E. W. Johnson. BUFF (9): 1, C. Bastow; 2, W. Ellerton; 3, F. Pickles; 4, c, Chapman and Bateman; vhc, G. H. Woodrow; hc, J. Hinchliffe. CINN. MKD.: Cancelled. SELL.: 1, C. Bastow; 2, W. Ellerton; 3, hc, S. Wilkinson; 4, Taylor Bros.; vhc, Chapman and Bateman; c, D. Thornton. Classes 2 and 4 were specially good for quality of birds.

SOUTH LONDON C. & F.A.
The above association held their Young Bird Show on June 12th, and it was well attended by members and friends. Mr. J. Robson judged, and his awards were well received. Mr. G. Munday won special for best in show and best Norwich with a clear. Mr. F. Johnson that for best Crest or Crestbred with a Crestbred. Mr. J. Fishwick won that for Yorkshire, and Mr. F. Bigley that for best British or Foreign bird with a well marked Linnet. CL. NOR. (10): 1, 2, spl, 3, Munday; 2, Johnson; vhc, Biss; hc, Males. MKD. NOR. (8) 1, 2, Munday; 3, Wilmot; vhc, c, Harriss. CRESTS OR CRESTBREDS (4): 1, spl, Johnson; 2, 3, vhc, Bigley. YORKS. (7): 1, spl, 2, 3, vhc, Fishwick; hc, Johnson; c, Males. A.O.V.: 1, Johnson, Lizard. BRIT. OR FOR. (4): 1, Bigley; 2, White; 3, Harriss; vhc, Males. Points gained for Points Cup, 1907: Munday, 25; Johnson, 23; Bigley, 22; Fishwick, 22; Harriss, 11; Wilmot, 8; White, 6; Biss, 4.

NORTH MANCHESTER C.B.S.
Held June 15th at Christ Church Schools, Harperhey. Judge, Mr. F. W. Nelson. AMATEURS, YORKS. YELL.: 1, 3, Norris; 2, Bardsley; 4, Fenton. BUFF: 1, 2, 3, 4, Norris; vhc, Aspinall; hc, Bardsley; c, Bichenhall. NOR. YELL.: 1, Fenton. BUFF: 1, 2, Fenton. BRIT. HARDBILL: 1, 2, Balshaw. COTTAGE: 1, spl, Lowe; 2, spl, L. Whitfield; 3, 4, Sheldon; vhc, hc, Gilbert. MULES: 1, spl, Balshaw. NOVICE, YORKS. YELL.: 1, 2, Dalzell; 3, Clarke; 4, Collinson; vhc, c, Odell; hc, Jones. BUFF: 1, Clarke; 2, Dalzell; 3, Collinson; 4, bc, Thomason; vhc, c, Odell. TKD. YELL.: 1, Jones; 2, bc, Odell; 3, Dalzell; 4, Clarke; vhc, Hulbert; c, Jones. BUFF: 1, hc, Dalzell; 2, Thomason; 3, Hulbert; 4, Jones; vhc, Clarke; c, Odell. NOR. YELL.: 1, Deakin. BUFF: 1, 2, Deakin. TKD. YELL.: 1, Deakin. BUFF: 1, Deakin. BRIT. HARDBILL: 1, 2, Odell. SELL., £1: 1, Norris.

RUTHERGLEN AND DIS. C.B.S.
The First Feather Show took place on June 15th. Considering the backward season, there was a very good turn-out, the Border class being particularly strong. Not only was there a large entry, but the quality of the exhibits were such as to reflect great credit on the members. Mr. Andrew Miller (Anniesland) acted as judge. BORDERS, CL. BUFF: 1, 2, Manson; 3, Joel; 4, Brownlie. YELL.: 1, Manson; 2, Boyd. BUFF VGTD.: 1, 2, Manson; 3, 4, Brownlie. YELL. VGTD.: 1, Manson; 2, Brownlie; 3, 4, Walker. GREENS OR CINN.: 1, Lappin; 2, 3, Manson; 4, Brownlie. NOR. CL. YELL.: 1, Bowman; 2, 3, McAulay. BUFF VGTD.: 1, 2, McAulay. YELL. VGTD.: 1, Bowman. CRESTS: 1, Joel. CRESTBREDS: 1, 2, Joel; 3, 4, McAulay. A.O.V.: 1, 2, Lappin. As it was so early in the season only one Mule was shown, a Siskin-Canary, the property of Mr. T. Lindsay. At the close, Mr. Miller congratulated the society on the appearance of their First Feather Show, and expressed the hope that, seeing such a good start had been made, an even higher standard of excellence would be achieved when the Winter Show came round. The Secretary replied for the society, thanking Mr. Miller for his kindness in judging, and for his encouraging words to the members.

OLDHAM.
The 57th annual show of young stock in connection with the Oldham and District C.B.A. took place in the Textile Dining Rooms, Oldham. The exhibition was considered to be the worst one the society had held for the last ten years, breeders complaining very hard against the militating effects of the weather. An entry of 53 was discouraging. As most of the members had lost nearly all their birds in the first round by being dead in shell, etc., this slack entry is nothing to be wondered at. Mr. Lowe has been very successful with his breeding, and with four nominated birds gained the full points (28) for the cup; this being his third achievement, the trophy becomes his own property. "Teddy," as he is familiarly called, also gained the special for best bird in show with a broken-capped Silver Lizard. For a youngster the bird stood out well, and should he moult out all right he will no doubt be heard of again, as he has plenty of size and work on him. Messrs. Winn and Martin also exhibited a couple of fine Lizards. The Lancashires were only a moderate lot, whilst Mr. Fitton staged a very promising Crest. In the Norwich classes Messrs. Sharples and Steeple put down some very typical youngsters. The competition in Yorkshires was somewhat keen. Mr. Hordern's birds were about to break in the moult, whilst Mr. Wagstaffe's were not quite fit. The judging was in the hands of Mr. Hardy, the treasurer of the society, who gave all-round satisfaction.
LIZ., GOLD (3) 1, spl, Winn; 2, Lowe; 3, Hampshire. SILVER (4): 1, spl, Martin; 2, Lowe; 3, Hampshire; 4, Ackroyd. BROKEN CAP, GOLD (2): 1, spl, Lowe; 2, Hampshire. DO., SILVER (5): 1, spl, Lowe; 2, Winn; 3, Martin; 4, Hampshire; vhc, Ackroyd. LANCS. COPPY, BUFF (2): 1, spl, Lowe 2, Winn. PLAINHEAD, YELL. (1): 1, spl, Fitton. DO., BUFF (3): 1, spl, Lowe; 2, Winn; 3, Ogden. CREST (1): 1, spl, Fitton. C.B. (3): 1, spl, Lowe; 2, Winn; 3, Ogden. NOR., BUFF (3): 1, spl, 2, Sharples; 3, absent. TKD. YELL. (3): 1, spl, Sharples; 2, Steeple; 3, absent. TKD. YELL. (4): 1, spl, Steeple; 2, Sharples; 3, Fitton; 4, absent. YORKS., YELL. (4): 1, spl, 2, Hordern; 3, Wagstaffe; 4, Dyson. BUFF (3): 1, spl, Wagstaffe; 2, Dyson; 3, Mirfield. TKD. YELL. (2): 1, spl, Martin; 2, Mirfield. TKD. BUFF (5): 1, spl, Hordern; 2, Fitton; 3, Wagstaffe; 4, Mirfield; vhc, Dyson. A.O.V. (3): 1, spl, Lowe; 2, Wagstaffe; 3, Dyson. £1 SELL. (1): 1, spl, Hampshire.

THE CAGE BIRD UNION.

The Question of the Hour.

THE FOLLOWING IS A LIST OF THE SOCIETIES WHICH VOTED ON RULE 17.

For: Consett, Derwent Valley, Hartlepools, Morpeth, Newcastle, Shields, Stockton, Wallsend, Ashington, Barrow, Cockermouth, Millom, Lancaster, Blackburn, Blackpool, Great Harwood, Burnley, Preston, Rochdale, Rochdale Good Intent, Todmorden, Bury, Bolton, Middleton, Manchester, North Manchester, Pendleton, Eccles, Altrincham, Chester, Crewe, Wigan, Warrington, Bramley, Hull, Leeds, Parkgate, York, Birmingham, Coventry, Hinckley, Leicester, Mansfield, Nottingham, Potteries, Wellingboro', Oxford, Grimsby, Langwith, Wolverhampton, Norwich Record, Diss, Bournemouth, Bristol C.B., Bristol Fanciers, Western Counties, Cardiff, Swansea, Cheltenham, Gloucester, Merthyr, Dowlais, Welsh National, London Provincial, London Counties, British Roller, Watford, Greenwich, Southern Norwich, Woolwich, Battersea, Metropolitan Association, Hastings United.

Against: Sunderland, Northern Crest, Southport, Oldham, Hazel Grove, Wharton & Winsford, English and Welsh Border, Sheffield, Derby, Ilkeston, Hanley, Leek, Exeter, Penzance, City and Suburban, London C.B.A., North London, Dulwich and Peckham, Wimbledon, Portsmouth.

G. W. F. LYTHGOE, Hon. Sec.

SIR,—In my last letter I ommitted to comment on Mr. R. J. Pretty's reference to "undesirables." Considering his vast experience, and for the benefit of the Fancy, I would suggest that he enumerates all these coming within that category, and thus assist others in avoiding them. JOHN TYSON.

A "Grate Fite" at Newcastle.

SIR,—We have heen treated to some very instructive and amusing letters in connection with the C.B.U., but I think the cake should be awarded to the letter in your issue of June 15th, signed "Rule Seventeen." In his report of the Neweastle meeting he says Mr. Shepherd and Mr. Currah occupied the chair; surely they must have a very unruly lot of members if it requires the services of two Chairmen to keep them in order. Then he goes on to say that there never was a better display of oratory at a hirdy meeting. It would be interesting to hear how many hirdy meetings he has attended other than his own Neweastle meeting. His nasty slap at Mr. Currah is beneath further notice. Then comes the most important news of all, not only important to the Newcastle members but to fanciers in general, viz., that they have two members who are always right and just! Now how can there he any need for a C.B.U. to deal with dishonest fanciers when it is proclaimed to the world that the Neweastle Society has a total of two honest men, and only a small membership of a little more than a hundred. The rolling forth of speeches in fine frenzy is really superb. Mr. Editor, might I suggest that you sneak this phrase and add it to your list of fanciers' terms in the next issue of CAGE BIRDS ANNUAL? "Rule Seventee" and his friends must have been in a terrible state of frenzy to stand in the street till midnight (as he says they did), the meeting having ended at about 10.15. S. MACTAVISH.

Mr. R. L. Crisp Takes a Turn.

SIR,—Many, I feel sure, will he pleased to see your disclaimer of partiality in connection with the C.B.U. which appeared in your issue of the 7th inst. You will, I think, agree that when correspondents deal largely in personalities and shelter themselves under nom-de-plumes, they to a certain extent, obtain an unfair advantage over their opponents. May I, therefore, venture to suggest that you still further show your impartiality by using your influence in the cause of fairness to induce "Observer" and "Country Reader" to disclose their identities. It has been suggested to me that they are one and the same person, or a case of Dr. Jekyll and Mr. Hyde, and as far as "Country Member" is concerned a veritable "Mrs. Harris" in relation to the C.C.C., and even if this construction is wrong may be he is playing jackal to someone's lion. I am sorry to see Messrs. Tyson and Greeves being drawn by him, and should be glad to see them decline to discuss anything further until he has established his right to interfere with C.C.C. matters (if he has a right). Why he has not the courage to put his name to his correspondence is beyond my comprehension. I am well aware "there are more things in heaven and earth than are dreamt of in my philosophy," but perhaps he will at least enlighten me on this point. I hope Mr. "Observer" will also favour the Fancy with his real name. It does seem such a pity to hide his luminous light under a bushel. I wonder if he would consider it fair criticism to compare him to "Fagan," "Bill Sykes" or the "Artful Dodger," or the opprobrious Jones Chuzzlewit? I may mention that I have no feeling in asking the question other than that of keeping the discussion within equitable bounds, for were it not for you, Mr. Editor, it is reasonable to suppose that it would be conducted in a very unbridled way, and soon degenerate into that of the gutter type, judging by some which has already appeared. It is as well to remember that we all have a perfect right to our views, and, provided they are not offensively expressed, should be treated with reasonable respect. It is to be hoped that the Fancy will not gauge the standard of veracity and intelligence of the so-called Upper House of Convocation of the Fancy, by the contemptable ebullition of rabid spitefulness, displayed recently hy one of its members. It is deplorable enough to contemplate such a one sitting in judgment on others. In conclusion, let me say that all the advocates arguments in favour of the C.B.U. savour very much of "Alice in Wonderland," except, of course, they cannot even say "We had jam yesterday." The best they can offer is jam to-morrow; hut to-day is out of the question. In other words, not what we have done, not what we are doing, but what we are going to do. R. L. CRISP.

Mr. R. J. Pretty Replies.

SIR,—Mr. Tyson, as usual when cornered, wanders off on another tack—he says he is still under the impression that his version is correct. Why is he under the impression when he knows it is an undoubted fact? I repeat my statement that it is a deliherate falsification of my remarks to make it appear that Mr. Lythgoe had been granting myself and others special privileges, whereas he only pointed out what I was entitled to do. Now to bring Mr. Tyson back to the facts, I refer him to your report, headed "An Important Point," and Mr. C. H. Cooper's enquiry which Mr. Crisp replied to in the negative. In order to remove that misapprehension I pointed out he could show at his show, quoting Mr. Lythgoe's authority, and instancing the West Herts Show as a case in point. To further disprove Mr. Tyson's malicious allegation I append a copy of my letter to Mr. Lythgoe:—

6, Old Burlington-street,
London, W.,
November 27th, 1906.

Dear Mr. Lythgoe,—I received yesterday morning a schedule from the West Herts Fanciers' Association, Watford. On looking through it I could not find that it was licensed by the C.B.U. On going to Watford last evening, to the Watford Cage Bird Society's Show, I met the Secretary, Mr. Edwards, and I asked him the question and he told me it was not. I told him that I was unable to exhihit there, although a member, and I also told him that a member of his Committee was in the same boat; and, further, that none of the members of the Watford and District C.B.S. could show. He thereon consulted this committeeman and they told me that they were under the impression that it did not matter this year, as there were some other shows doing the same. This said committeeman, who is also a member of the L.C.B.A., said he should show. I said I dare not even if I wanted to, as others had already been warned about it, and I advised him to look up last week's papers and see for himself. After discussing the matter at some length Mr. Edwards asked me if I would write you and see if the license could be given now. I expressed my doubts, as the schedule had been issued, and it did not cross my mind that the license had to be applied for 28 days beforehand. I don't know if anything can be done specially in this ease, as it is not a wilful case of not applying, but simply a misunderstanding. But if you can grant a license in this instanee I would take the responsibility as to the fee, etc. He could see the state of affairs after I had talked to him and explained matters. I should he glad if you could do anything in the matter to ohlige. You will understand that this is a mixed society.—Yours sincerely,

R. J. PRETTY.

On receipt of Mr. Lythgoe's reply (which I quoted last week) I immediately sent a copy to the West Herts Secretary, and told him to apply for the license at once, in order to benefit the section. I made my entries under the impression that the license had been applied for, not, as Mr. Tyson implies or insinuates, that we had special permission. The case is clear enough (except, perhaps, to Mr. T. and his friends) that fanciers who are members of an affiliated Society can show at another show, open or otherwise, providing THEY ARE MEMBERS OF THAT SOCIETY holding the show (whether affiliated, licensed or not). I have already proved Mr. Tyson's reckless assertion that I am prepared to misrepresent opponent or friend is false; hut I can and am prepared to show up a humhug, and what is more, say what I mean and speak my mind irrespective of friend or foe. He is also good enough to inform us that we have not exchanged words for some time. One dreads to contemplate the result of a verbal exchange with a "gentleman of mature years" who commences a letter with such terms as "vehement effusion." I say it is since he wrote me a letter on January 14th, 1903, when he demanded that I should pay the losses incurred by the Scotch Fancy classes at the L.C.B.A. show the previous year, insinuating that I said or promised to guarantee such classes (another untruth). The Club gave extra prize money, found specials and paid the judge extra for judging, and then he had the cheek to say I also guaranteed. I suppose he thought he had got a juggins. I have been very, very earcful with him ever since, and one has need to be with such. So more or less I have treated him with contempt ever since. Now he brings up another malicious statement in respect to a City and Suburban Show. Yes, I made the statement, but Mr. Tyson omits to state that "the honourable member" was my informer, on whose authority I made the statement, and neither Mr. Tyson or myself would for one minute doubt the veracity of the "honourable member." Now we reach the "Grand Dramatic Denunciation"—"I must nail to the counter," etc. What a nail! and even the counter, like his arguments, are rotten. "The late C.B.C. never gave medals to the L.C.B.A. members." I have the schedule of the L.C.B.A. twelfth annual exhihition held at the Royal Aquarium ou November 20th, 21st and 22nd, 1900, Hon. Show Secretaries Messrs. Attridge and J. Tyson. Now let Mr. Tyson turn to Page 24, and see that Special 53 reads thus: Handsome Gold Medal presented by the Cage Bird Club for most points gained by a member of the C.B.C. or L.C.B.A.; again, Special No. 54, Handsome Silver Medal, worded exactly the same; and, further, it appears in the catalogue the same. Now, John Tyson, who is telling the falsehood? What could be plainer? Where is the counter and the nail?

Now for the next untruth, "That Mr. Tyson is opposed to the Union." Will he kindly explain what he means when replying to "A Country Member" in the issue of your paper of May 19th, page 459. He says: "'A Country Member' asks that the C.B.U. be given a chance to settle down. By all means, let some fancier compose a sleeping draught aud another its epitaph." What construction can be put upon such a statement than that he is opposed to the Union. Everyone is asking why does he remain a delegate? As to his other two friends, Messrs. Curtis and Dewhurst, they say they are not. Well, then, in future, we must not take any notice of their speeches, as evidently they do not know what they are talking about; neither must we take them seriously, as they do not mean all they say, but are carried away hy the "exuberance of their own verbosity," and lose themselves. As Mr. Curtis is such a "connoisseur" of circulars (as the members of the Cinnamon C.C. know), I refer him to page 501 in vol. 9 of this journal.

I thank those delegates who have elected—no, no! I mean voted for—me on the Executive (which to me is an agreeable surprise), and which I appreciate as a great honour, still more so as it has changed Mr. Tyson's feeling to that of one of the greatest sympathy for the Union. They can also rest assured that I shall not dictate or dogmatise, as has been suggested, but with the benefit of some 14 to 15 year's experience I hope we shall make the Cage Bird Union a blessing to the Faney. In conclusion, I hope that if ever I arrive at Mr. Tyson's mature years (as he puts it) I shall not have lost the horror of making (or presenting) a spectacle such as the painful example he has gratuitously presented to us in your valued columns.

R. J. PRETTY.

ALL THE YOUNG BIRDS YOU BREED

Should have their Pedigrees and particulars entered up at once in

THE STOCK BOOK.

"Simple in method, easy to understand, thorough and complete, indispensable in every bird room, and wonderful value for money."

That is the Universal Verdict of all Fanciers on this, the latest publication for the benefit of keepers of cage birds. Read the sheaves of testimony to its merits published in the last few issues of CAGE BIRDS.

Compiled by Mr. G. E. WESTON, our

BREEDING ROOM REGISTER

and BIRD KEEPER'S ACCOUNT BOOK (Copyright)

Will furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints will also be found in its pages.

A DISCUSSION ON SEEDS.

Some Information About German Rape.

At a recent meeting of the City and Suburban Association of Canary Breeders, a very interesting discussion took place, arising out of a lecture delivered by Mr. T. R. Trower, on "Bird Seeds." Many pertinent questions were asked, and Mr. R. L. Crisp conducted almost a cross-examination of the lecturer in his eagerness to obtain information for himself and those present. Mr. Trower took up the position, however, that he was simply an expert on seeds, that he did not set up to he a chemist or a bird doctor, and while he might have his own personal opinions upon matters which came within the province of the bird fancier, he preferred not to express them.

Mr. F. J. Martin asked the lecturer whether German summer rape ought not to have a dark blue tint. Mr. Trower replied that rape was sold in all sorts of tints. He recollected a certain seed sold by a small vendor which was a beautiful blue colour, but which, when placed in a wet handkerchief instantly transferred that colour to the handkerchief. It was simply old cabhage seed dyed, and the dealer who sold it was liable to a £100 penalty. Good German rape should be perfectly sweet and fresh to the taste, free from acidity, rawness, hotness, or any rancid flavour. In testing any kind of seed, you could have no better judges than your own mouth and eyes. A seed that looked good and tasted good was hound to he good for birds. Mr. Crisp inquired whether it was wise to keep rape seed for any length of time. Mr. Trower said that after a year or two rape seed undoubtedly deteriorated. It hred a large quantity of small mites, and a bag of rape tied up for two years and then opened, would be found to be a mass of little living creatures. The canary seed, on the contrary, seemed to improve by keeping a year or two. He had known canary seed three years old quite as good as it was at one year, and he had seen canary seed 10 years old in fairly good condition.

Mr. Trower refused to be drawn on the point as to whether rape seed ought to be kept for 12 months, or ought not to be kept longer than 12 months. Some fanciers believed in the one and some in the other. The late Mr. Zache, a well-known expert, of Gt. Portland Street, always liked rape to be not less than 12 months old. He would say, however, that rapo lost, after 12 months, a certain amount of oil, and it became drier; but he did not regard that fact as any detriment to the hirds. Commercially, rape kept longer than 12 months was of the same value as rape that had not been kept so long.

He knew no way of telling the age of seed, but mentioned that seed merchants were in the hahit of putting seed which they desired to test into a little pot, to see how many of the grains would grow, in order to find out which was good and which was bad, for very old stuff would not sprout at all, consequently was useless. In the same way, old German rape seed would take longer to germinate than new on being soaked in water.

At the close of the discussion a very large collection of seeds Mr. Trower had on view was examined by three members present, and the samples seemed to meet with considerable approbation and favourable comment.

In Australia.

At the Newington Asylum, Parramatta, there is situated in the grounds a small cottage, which is used daily by inmates of the establishment. On one of the walls is a small switch used for an electric light. This has been disused for some time, and has been selected by a pair of Starlings as the foundation of their nest. At present there are two eggs in it, and the birds fly in and out of the room quite disregarding the doings of the inmates.

THE SHOWS.

SHIPLEY.

The Shipley Young Bird Show was held at the Victoria Hotel, Saltaire Road, on June 15th. The total number of entries was 70, this being a record for a first feather show in the district. The special for best bird in the show was won by Mr. Long's clear Buff, a bird with plenty of length, grand position, and well on leg. The best 3rd Yellow was won by Mr. H. Dobson; the best 3rd Buff by Mr. Grauge. Mr. W. A. Cowgill judged. Mr. Dobson, the Secretary, had the birds well staged by 2 o'clock, and all the tickets were on and the public admitted by 3.30. Many of the birds were much admired.

CL. YELL. YORKS (14): 1, c, Towers, well on leg, good wings and tail, full of quality, neat head, will make a good one; 2, hc, Hudson, well on leg, shade flat on head, fine flights and tail, grand carriage; 3, Dobson, good head, slim, well on leg; vhc, Marsden, long flight and tail, good stand. BUFF (9): 1, Long, well on leg, good wings and tail, full of quality, a beauty, winner of special for best in show; 2, Marsden, well on leg, long flights and tail, bit strong, yet full of quality; 3, Bradshaw, grand legs, also a shade strong, long flights, steady; vhc, Crosland; hc, Whitaker; c, Hudson; No. 7, Long, No. 9, Lowden, wrong class. TKD. BUFF (8): 1, Crosland, good wing, marked well on leg, long flight and neat tail; 3, Bradshaw, cheek ticked, well on leg, long flights and tail, full of quality; 3, Battye, ticked head and eye, stands well, fine flights and tail, very steady; vhc, Hudson; hc, Clegg. YELLOW (4): 1, Long, ticked on cheek, very steady, full of quality, neat wings, grand piped tail, even ticked; 2, Marsden, capped on head (a mark we do not like to see on a bird), stands well on leg, long flights and neat tail; 3, Bradshaw, thigh ticked, bit snaky, well on leg, very wild, should improve; vhc, Battye. UNEVEN MKD. YELL (6): 1, Towers, heavily marked, well on leg, long flights and tail, full of quality; 2, 3, Dobson, varieg., neat head, good wing carriage, nice tail, third unevenly marked, full of quality, well on leg, very wild; vhc, Grange. BUFF (1): 1, Stubbs, varieg., fairly smart one. CINN. MKD. YELL. (4): 1, 2, Dobson, eye and wing, type and quality, well on leg, good wings and tail, second eye, wings and head, well on leg, slim, full of quality; 3, Armstead, small, typical, very neat; vhc, Snowden. BUFF (8): 1, Fieldhouse, grizzled head, long, slim, full of quality, well on leg; 2, Grange, capped on head, cheek and wing, bit on the stout side; 3, Grange, eye and wings, ticked on head, good wings and tail, we liked; vhc, Stubbs; four birds in this class were "wrong classed." BRITISH (4): 1, Bradshaw, nice Greenfinch; 2, Dobson, Goldie; 3, Hudson, Linnet; vhc, Towers, Chaffinch.

LISKEARD.

The Royal Cornwall Fanciers' Association held its Annual Show at Addington, Liskeard, on June 12th and 13th, in very wet weather, which told considerably on the good collection of exhibits, which faced the judge, Mr. R. B. Tope (Plymouth), whose awards gave entire satisfaction. Some of the classes were very small, on account of the breeding season being in full swing; but the Finch, Mule and British classes were well represented, and competition was very keen. The quality of some of the exhibits was above the average, and well up in colour and feather. The winning Crest was a gem, being quite a baby, with a lovely crest and body, and no doubt will be heard of again. The special for best bird in show was captured by Mr. F. Collins with a smart, young, lightly-variegated Linnet Mule, a credit to its owner. In Messrs. May and Peter the society have a pair of most hard-working Secretaries, and they were assisted by a capable lot of stewards, who did their best to look after the welfare of the exhibits.

YORKS (4): 1, res., Pincombe, four-point Cinnamon Yell., good colour, neat head, tail and wings, res. nice length and style, not so good in wing carriage; 2, Lobb, tkd. head Yell., good length, nice position, spoilt a little in the wash; 3, Thomas, Buff, grand shape and style, only fault little too stout. NOR. YELL. (1): Veale, beautiful quality, good shape, well packed flights and tail, nice carriage, rich level colour. NOR. BUFF (1): Trevena, splendid colour, good-shaped body, good neck and back well mealed. NOR. TKD. (2): 1, spl., Trevena, Yell., neck marked, good colour and quality, neat tail and flights; 2, White, Yell., marked neck and wings, nice shaped body, good quality, nice head, flights and tail. C.B. (2): 1, 2, Symons, marked neck and wings, good skull, in grand feather, second good body and skull, bad condition. CREST (2): 1, spl., 2, Symons, even marked, dark crest and wings, nice frontal, good length and droop, a gem for a young bird, second variegated Green, good body, but not the crest of winner. A.O.V. (2): 1, 2, Biddick, two good Scotch, Yell. and Buff, not looking their best, being wet and cold under the canvas. GROUP (4): 1, spl., Gaved, Mules, three Buffs, one yellow, good group and well shown; 2, Symons, Crestbreds, will make good birds, very young as yet; 3, Pincombe, Yorkshires, fair birds; vhc, Thomas. GOLDFINCH MULE, LIGHT (13): 1, res., Collins, six-pointed Buff, grand eye and wing markings, splendid blaze and in good condition, res. four-pointed Buff, shade smaller, but good markings, well shown; 2, Gaved, another six-point Buff, smaller; 3, vhc, Browning, four-point Buff, good eye markings, nice size, colour and shape, in good condition; hc, Crowell; c, Watson; a grand class, best seen in the district for a long time. A.O.V. MULE OR HYBRID (6): 1, two spl., 3, res., Collins, young, lightly-variegated Linnet Mule, good size and colour, put up in rare fettle, sweet exhibit, third Goldie-Greenie, good size and colour, splendid wing bars, res. Goldie-Bullie, wants a moult, will make a good one; 2, Browning, splendid Linnet-Bullie, grand colour on breast, extending well over thighs; hc, Hove. GOLDFINCH, CAGE-MOULTED (11): 1, Thomson, good blaze, bars and buttons, very steady and well shown, well tanned chest; 2, White, nice bright blaze, very expansive and rich tanning, good buttons and bars, equal to first; 3, Brewer, good face, buttons and bars, nice body colour; res., Vincent, nice wings and buttons, good size, well placed; vhc, Browning; hc, Gaved, c, Adams. PAIR (2): 1, Symons, Crest and Crestbred, good even-marked crest and variegated Crestbred, rare skull and lashing; 2, Biddick, Scotch, grand shoulders, carries tail well under perch, looking very cold. BRIT., LARGE (4): 1, spl., 2, res., Thomson, Cornish Chough, in new hands, grand beak and leg colour, lovely sheen, late Tickell and Son, second Waxwing, splendid colour, beautiful feather, clean cut bib, well shown, res., Redwing, very wild; 3, Whitford, Thrush, chest well spotted, very steady. SMALL (9): 1, 3, Thomson, Nightingale, good colour and condition, well staged, third Treecreeper, grand markings, in good condition, fell dead after judging; 2, Collins, Snow Bunting, large, good colour, very steady, well placed; res., Hicks, black-legged Goldie, grand blaze, good buttons and bars, nice body colour; vhc, Arthur; hc, c, Rowe and Hancock. FOREIGN (4): 1, Tarratt, Indian Shama, good colour, nice tail, in good condition; 2, Davies, King Parrakeet, good colour and feather, wins well; 3, Feltham, Grass Finches, very taking little birds, show them in a better cage, Mr. F.; res., Lee, Cockatoo, good colour, nice head, good condition.

CAPE TOWN.

The first Members' Show organised by the Cape Town Canary and Cage Bird Society was held on May 24th and 25th in the Oddfellows' Hall. The society has only been in existence about seven months, and has on its roll 28 members. The first effort was, on the whole, of a creditable kind. Some score members sent over 200 birds for competition in 104 classes, covering practically all kinds of cage birds. The best represented classes were the Yorkshires and Norwich, though even in these sections a few classes had to be cancelled for want of entries. In the young Colonial bird section strong competition was witnessed among the Yorkshires and Norwich. In addition to the ordinary prizes, two silver cups, twelve medals, two Canaries and a quantity of seed were offered as special prizes. Mr. Lawrence's cup for the best young Crested Norwich was awarded to Mr. J. Templer, who also had the distinction of carrying off Messrs. Stranach and Son's cup for the best pair of Canaries matched for breeding. The prize list is subjoined:—

DUTCH FRILLS: 1, Templer; 2, Lawrence. HEN: 1, Templer; 2, 3, Lawrence. YORKS., CL.: 1, 3, du Toit; 2, Walker. HEN: 1, Templer; 2, Carrick. TKD., ETC.: 1, Mrs. Bartlett; 2, Templer; 3, Carrick. GREEN HEN: 1, du Toit. LANCASHIRE COPPY: 1, Templer. HEN: 1, Templer. LANCASHIRE, PLAINHEAD: 1, Templer. HEN: 1, Templer. NOR., YELL.: 1, Lawrence; 2, Stevens; 3, Lawrence. HEN: 1, 3, Lawrence; 2, Templer. BUFF: 1, Templer. HEN: 1, Templer; 2, du Toit; 3, Mrs. Bartlett. TKD., ETC.: 1, Templer; 2, du Toit; 3, Lawrence. HEN: 1, 2, 3, Lawrence. GREEN: 1, Lawrence, 2, du Toit. HEN: 1, 2, 3, Lawrence. DARK CREST: 1, Templer; 2, Lawrenee. HEN: 1, Templer; 2, du Toit; 3, Carrick. LIGHT CREST: 1, Templer; 2, Lawrence. HEN: 1, Mrs. Bartlett; 2, Carrick. CL. CRESTBRED: 1, 2, du Toit; 3, Templer. HEN: 1, Templer; 2, du Toit. A.O.C. COCK: 1, Templer; 2, Carrick; 3, Lawrence. HEN: 1, Templer; 2, Carrick. SINGING CONTESTS.

ACCRINGTON.

A Lark singing took place at the Welcome Inn on Saturday, June 15th. There were eleven entries to compete for the four prizes, which were given for best singing, ten minutes hanging. The following were the winners:—Jackson, 6.41; Sanderson, 5.28; Hargreaves, 4.47; Greenwood, 4.47. The singing did not come up to expectation, on account of the weather being so very dull and wet.—A. KNOWLES, Sec.

[Please write on one side of the paper only.—ED.]

LEEDS.

Contest held at Skinner's Arms, Buslingthorpe, June 15th. Sixteen birds competed for three prizes. There was a good number present, and the birds sang well, everyone being satisfied with the result. Mr. J. Clark's bird ran like a German Canary, and it would have taken a fair good Linnet to beat it. 1st, Clark; 2nd, Galley; 3rd, Neat.—F. RAPER, Sec.

Grand Linnet contest, June 15th, at King's Head. Seventeen birds sang for three prizes, given by Mr. J. Booth, before a crowded company. 1st, Hardcastle; 2nd and 3rd, shared by F. Galley and D. Clegg. June 16th, twenty-four birds sang in heats. 1st, Hardcastle; 2nd, Crowther; 3rd, Mawson; 4th, Fisher. Judges, C. Cooper and J. Melia.—T. SUMMERS, Hon. Sec.

The Prince Albert L.A. met June 15th to compete for three prizes, given by Mr. J. R. Saynor. There was a good attendance of visitors to hear the birds sing, quality singing only. Mr. Allen judged the birds to the satisfaction of all present. Fifteen previous winning birds competed. 1st, 2nd, Whitfield; 3rd, divided between Dean and Binner.—E. WOOD, Hon Sec.

CROOK AND DIS. C.B.S.

Linnet Singing Contest at Love's Hotel on June 15th. Fourteen birds entered for the four prizes. 1st, 2nd, 3rd, Cuthbertson; 4th, Wilson. A most pleasant afternoon was spent. Judge, Mr. Geo. Reed. Timekeeper, Mr. J. J. Bright. Book-keeper, Mr. W. Fairless.—WM. RUTHERFORD, Sec.

SHEFFIELD.

There was a Linnet singing contest at the Don Inn, Carbrook, on June 16th. Twenty-three birds competed for three prizes. There was a large company present, and some good singing was heard. 1st, Vyner; 2nd, Robinson; 3rd, Wilson. Judges, Messrs. Blackadder and Gregory.

At the New Inn, Duke-street, Park, on June 16th, ten birds sang for three prizes. There was a fair attendance, and the judges were Messrs. H. Spottiswoode and J. Wragg. The points scored were:—Fowlstone, 97; Darkey, 60; Fowlstone, 56.

At the Old Britannia, Attercliffe, on June 16th, ten birds sang for three prizes. There was a good company present, and the singing was much enjoyed. The winners were:—Robinson, 73; Biggin, 60; Biggin, 57. Judges, Messrs. Bollington and Watson.

BLACKBURN.

Blackburn Linnet S.A. held their consolation contest June 15th, at the Old Red Lion. Seventeen birds competed for eleven prizes, given by Messrs. R. Topping, W. H. Topping, J. Dobson, G. Rostron, R. Leeming, C. McGreevey, H. Christopherson, J. Walsh, and three given by the society. The winners were:—1st, Marsden; 2nd, Place; 3rd, Harrison; 4th, Blackshaw; 5th, Leeming; 6th, Hayhurst; 7th, Fender; 8th, Blackshaw; 9th, Halliday; 10th, Sargent; 11th, Gray. There were six other prizes, given by Mr. D. Bentley, of Great Harwood, for the birds which sung but did not secure a prize.—R. HAYHURST, Sec.

Next All England singing contest for quality will take place next Saturday, June 22nd, at the Vauxhall Inn, Witton, Blackburn, singing to commence at two o'clock. Entrance, 1/- per bird; 1st prize value 15/-, and a number of other prizes.—FRED HOWSON, Proprietor; RD. HAYHURST, Sec.—Advt.

REVIEWS OF SCHEDULES.

Wimbledon First Feather Show.—July 1st. Judge, Mr. J. Robson; 16 classes:—Norwich and Yorks, two each for champions, amateurs and novices, and four members. Prizes on sliding scale. Entries close June 26th, to Mr. W. H. Colman, 40, The Broadway, Wimbledon.

Queen's Park First Feather Show.—June 27th; judge, Mr. J. Robson; 31 classes:—Crests, Yorks., two each for novices, amateurs and champions; Cinns., Lizards, one each, same sections; Mules and Brit., six; selling, one. Entry fee, 1s. Prizes on sliding scale. Entries close June 22nd, to Mr. J. C. Birch, 68, Ashburnham Road, Willesden, N.W.

"LIVERPOOL" VIRUS
is absolutely harmless to human beings and animals, but is speedily fatal to
RATS & MICE.
It causes a fatal disease to spread through a colony of these pests.
They do not die in their holes.
There is, therefore, no danger of smell from dead bodies.
Mice Virus, 1/6 per tube.
Rat Virus, 2/6 and 8/- per tube.
Prepared in Liverpool. Of all Chemists.
EVANS, SONS, LESCHER & WEBB, Ltd., Liverpool and London.

LEEDS FANCIERS AT MONK FRYSTON.

Saturday, June 15th, was a wet day, naturally, for were we not due at the aviaries at Monk Fryston? But, having received the kind permission of the owner, the Rev. Mr. Hemsworth, we turned up at the station 20 strong, and set out with light hearts, notwithstanding the wet. Arriving at South Milford we trudged the two miles, through rain and mud, only once stopping, some of the party having got interested in a Black Bull. When we reached Monk-Fryston Hall, where the aviaries are situated, we found Mr. Levitt, who has charge of the birds, etc., waiting for us. The aviaries consist of 67 outdoor pens, containing about 200 birds and animals. There is also an indoor aviary containing about 50 birds. The best thanks of the party are due to Mr. Levitt for the manner in which he explained everything. It was an eye-opener to us to see the Foreign birds out in the rain. Mr. Levitt told us some of them, although wooden hut arrangements for shelter were provided in each pen, had not been under shelter for five or six years. They never used the hut. Pen No. 6 contained a fine white-tailed Sea Eagle, who treated us with contempt, and did not deign to look at us. Pen 19, among other birds, some Bleeding Heart Pigeons, looking for all the world as if they had been shot in the breast. Pens 20 and 21 full of monkeys, where our party grouped for some time. We must have been as interesting to the monkeys as they were to us. Pen 22 black and white Ruffled Lemurs. They are rightly named. They got very ruffled, and screamed something awful. Pen 23, Demoiselle Crane, standing well on legs, showing plenty of thigh, will stand high in any company. Pen 26, white Jackdaw, did not care much for the rain. Pen 44, Rock Peplers, bred in the aviary, and I suppose the first bred in England. Pen 56, a fine specimen Salmon-crested Cockatoo. They must have been singing "Little wooden hut" to him. He certainly had not left it for anybody. He had pulled it all to bits. To describe the whole place would fill this week's issue. Among the birds were Red and Gold, Blue and Yellow and Military Macaws, Port Lincoln Parrakeets, Laughing Jackals, Paradise Whydahs, Saffron, Zebra and other Finches, Orange Bishops, Mocking Birds, etc., all in outdoor aviaries. It is a splendid place, and well worth a visit. Permission is granted by the Rev. Hemsworth to parties, and tea can be had in the concert room in the park. We sat down to tea about 5.30, and soon there was a pile of empty plates. All the colour-food eaten up splendidly. There will be a fine blaze of colour when they have finished moulting, if Saturday's tea was a sample of what Leeds fanciers can do in the eating line. Home again at 7.22. Wait! I hear the singers of the party got lost, and did not arrive till eleven. All the party enjoyed themselves, and cried encore. I think we shall repeat the performance in August.

C. R. STEPHENSON.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).
W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate.
J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.
W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.
GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. Thirty years' experience. Terms moderate.
J. BERTIE, 7, Mitchell-st., Nottingham, Judge of Canaries and Cage Birds; all classes; 30 years' practical experience.
W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over 25 years' practical experience. Terms moderate.
A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.
J. DOBSON, 14, East Road, London, N. Judge of Canaries and Cage Birds.
J. W. DRIVER, (Admitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.
GEO. GARDNER, 11, Haverstock Road, London, N W. Judge of all kinds of Cage Birds.
C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow. Judge of Canaries, Mules, British and Foreign Birds.
E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds (all varieties). Life experience.
F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees, Mules, British and Foreign, a Speciality. 17 years exhibitor. Terms moderate.
W. R. MILES, The Aviaries, Chichester. Judge of Canaries and Cage Birds. Life experience.
W. MUNDELL, 6, Carlisle Place, Bradford. Judge of Canaries and Cage Birds.
J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds. Author of "The Common Sense of Canary Rearing."
J. PATTERSON, Chirnside. Judge of Cage Birds All varieties. Wide practical experience. Specialist Border Fancy Judge.
J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.
PARKER ROBINSON, N.B.B. & M. Club, 1, Back Hartington Street South, Barrow-in-Furness. Cage Birds, all Varieties.
J. H. ROE, 167, Clarence Rd., Derby. Judge of Canaries and Cage Birds. Twenty years' practical experience.
WILLIAM J. ROSS, 19, Haulgh Road, Invernces, N.B. Judge of Pigeons, Canaries and Cage Birds. All varieties. Life experience.
C. E. SILK, The Aviaries, Emsworth, Hants. Judge of Canaries and all Cage Birds. Life experience.
HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.
R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.
J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of Canaries and Cage Birds. 25 years Breeder and Exhibitor leading shows.
J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. Thirty years' experience.

SHOW ADVERTISEMENTS

Scale of Charges.

SHOW ADVERTISEMENTS, which must be fully **PREPAID,** are inserted in CAGE BIRDS at the following rates:—

¼-inch **2/-**, ½-inch **3/-**, 1 inch **5/-**

If more than 1-inch in an issue is required the charge will be **6s.** per inch and *pro rata* except to "Guaranteed" Shows appearing in our Dates Fixed column, which are charged at 5s. per inch and *pro rata*.

SHOW ADVERTISEMENTS across two or more columns 7/6 per inch, column width, except to "Guaranteed" Shows, for which the charge is 6/- per inch, column width.

(FULL TARIFF ON APPLICATION).

BATTERSEA and Dis. C.B.A. 2nd Annual Open and Members' Young Bird Show, **Wed., July 3rd.** (Entries close June 24th). "Duchess of Devonshire," Lavender Road, Clapham Junction. J. ROBSON, Judge. Schedules and any information, F. Easterling, 5, St. Mark's Road, Fulham Road, S.W.

WIGAN and District Cage Bird Society. The Tenth Annual Show of **Canaries and Mules** (in their nest feathers) **and British Birds,** will be held at THE ADELPHI INN, Harrogate St., WIGAN, **On Saturday, June 29th, 1907.** Prizes 10/-, 5/-, and 3/-. **SCHEDULES NOW READY.** W. RIDGE, 55, Poolstock, Wigan, Hon. Secretary.

QUEEN'S PARK and District C.B.A. Members' First Feather Show at the WINDSOR CASTLE HOTEL, Harrow Road, W., **Thursday, June 27th,** 2 to 10 p.m. Judge:—J. Robson, Esq.

South-West London C.B.S. Young Bird Show, **Saturday, June 22nd, 1907, at Plough Hotel,** near Clapham Junction. Exhibits to be in Show by 3 o'clock.—W. LILLEY, Hon. Sec.

Two Pounds Reward.

On Sunday last (the 16th inst.), writes Miss L. M. Medland (Luxborough House, Northumberland Street, London, W.), I had the misfortune to lose my Greater Spotted Woodpecker, which had been in my possession about a year. Knowing that CAGE BIRDS has such a wide circulation, I am advertising a reward of £2 for its return, hoping it will meet the eye of someone who may be fortunate enough to get the bird; but I doubt very much if he will ever be seen again. He may be easily recognised by one broken toe.

The Leigh and Dis. C.B.S. intend to hold an open £5 Limit Show, date not yet definitely chosen; and also to join the Cage Bird Union on an early date.—A. PARKS, Sec.

I am pleased to inform you that at the meeting of the Downend and Dis. F.S., held last Thursday, it was decided to join the Cage Bird Union for the coming show to be held on August 6th.—F. NORRIS, Sec. Cage Bird section.

Have had such numerous applications re my Tanagers. Thanking you, and complimenting you yet again on such an admirable Fancy paper as CAGE BIRDS—"the hobbyists' ideal,"—O. MILLSUM, Swindon.

The two judges appointed at Earlston, N.B., Show on November 30th, 1907, are Mr. W. C. Duncan, Coldstream (Borders), and Mr. Goodfellow, Edinburgh (British), writes Mr. John Brockie (Sec.).

Hitherto, writes Mr. Gartbwaite, of Grimsby, I have had to decline wholesale orders for "Lifebelt" food. I have now increased my facilities for rapid production, and am prepared to execute wholesale orders. It is selling famously.

The quarterly balance-sheet of the Queen's Park C.B.A. shows the cash in hand to be £3 8s. 6½d., thus things are still going along merrily in the right direction. The Secretary is Mr. J. C. Birch, 68, Ashburnham Road, Willesden.

At the Middlesborough and Teeside C.B.S. Annual Show, on October 26th next, Mr. W. Mundell will judge Canaries, and Mr. F. Marwood British birds, writes Mr. A. Wake, the Sec. The Young Bird Show is fixed for July 13th.

At a meeting held at Mutton's Hotel, High Street, Redhill, on the 10th inst., writes Mr. A. W. Bacon, the Hon. Sec., it was decided to hold the Reigate F.A. Young Bird Show on July 8th at this hotel; judge, Mr. J. Robson. Entries close June 29th; birds to be at show by 6 p.m. Show will open 7 to 10 p.m. Members are strongly urged to help us.

Fanciers and others in need of new cages should send a postcard to Mr. J. A. Reece, Jockey Wire Works, Colston Street Yard, Bristol, who has just issued a new list of cages suitable for Canaries, British and Foreign cage birds. The cages are fully and clearly described, the list is splendidly illustrated, and the prices quoted are most reasonable.

When buying pepper insist on having Ramsden's. It is, without doubt, the finest on the market. It is being used this season by hundreds of leading fanciers, with marvellous success. When buying pepper, don't be persuaded that any other pepper (probably giving much more profit to the dealer offering it) is just as good as Ramsden's—it isn't.—ADVT.

From Mr. Leclair comes a sample of his special combination cage bird grit, which is composed of ground cockle shells and flint grit, which provides the birds not only with good grinders to assist in the proper digestion of their food, but also gives them the lime and salt which is so needful. Mr. Leclair's address is 150, Wallwood Road, Leytonstone, and he, no doubt, would be pleased to send samples.

"Bird Notes" for June is to hand, and a very interesting number it is. The frontispiece is a plate of four Finches, illustrating an article by Mr. Wesley T. Page on "The Genus Spermophila." Mr. Hopkinson writes entertainingly on "The Amethyst Starling," whilst Dr. Snell's contribution, "Some Birdy Rambles in Europe," reveals the contributor as one who possesses a keen eye for the beauties of Nature, and is gifted with a facile pen. Not the least interesting of good things is Mr. Goodchild's article on the Zoo's recent receipt of a consignment of Humming Birds, whilst Mr. D. Dewar writes learnedly on "Aviculture and Zoological Theory."

Send at Once.

Every keeper of birds should note the offer made on our back page this week. Take advantage of it while it lasts. Send us a sixpenny postal order at once. In return we send you the "Annual" and a set of beautiful picture postcards.

More News.

Last week we spoke of the accuracy (?) of the information on birds given readers by certain of the lay press. Here is a further sample from one of the papers of the "Chat" description:—The best time for mating is when the head of the Goldfinch loses every trace of black and takes on a beautiful transparent pink and white colour.

The Rare Merlin.

Breconshire, it is said, possesses two records of a Merlin's nest—one taken on the Grouse Hill at Wauntika in June, 1838. On May 22nd, 1903, Mr. Bond, an ornithologist of great repute, visited the locality and succeeded in finding a nest containing three eggs. The discovery was all the more interesting as the Merlins had taken possession of a Crow's deserted home, which is a thing of extremely rare occurrence, as this pretty Falcon usually lays her eggs in a scratching in tall heather.

Mr. J. S. Clarke will judge the Young Bird Show of the Civil Service F.A. on July 16th.

Barrow C.B.S. Show will be held December 13th and 14th. Mr. A. Wellings will judge.

Newark Show will be held on Thursday, November 21st.—S. C. WILKINS, Sec.

Mr. J. Simon has been appointed Secretary of the Llanelly and District C.B.S., and all communications respecting the same should be addressed to him at 12, Tyrfran, Llanelly.

The consignment of birds which I sent to Scranton, U.S.A., in January, arrived safely, are all doing well, and breeding prolifically. They have given such satisfaction that I have a repeat order from the same gentleman, to be despatched by the end of this month.—W. ORIEL, Blaina, Mon.

Very practical and workable are the rules of the West of Scotland Norwich, Border Fancy, etc., Association. From the card which has been sent to us we note that there are no less than six silver cups in competition for the members. The Secretary is Mr. George Smart, Carmye, Glasgow, who will be pleased to give information to intending members.

The First Feather and British Bird Show of the Walthamstow F.A. is fixed for July 13th. It was decided at our annual meeting to have a separate secretary for the cage bird section. Being assistant sec. and a cage bird man, I have been appointed to that office. Our chairman, Mr. J. S. Clarke, is, as you know, also a cage bird man, and we have a very capable and energetic cage bird committee. Cage bird fanciers may, therefore, rely on getting every attention from the W.F.A.—ALBERT B. FORSE, Hon. Cage Bird Sec.

In the Air.

If all the rumours at present floating about have even a tittle of truth behind them, there would seem to be highly interesting developments ahead with regard to the case of the disqualified Green Canaries at the last great National Crystal Palace Show. There is promise of work for the legal fraternity.

Hoopoe seen near London.

A Hoopoe, that rare visitor to the British Isles, was (according to the "Standard") observed in the Alexandra Recreation Ground, Penge, on Sunday last, June 16th. This bird has only occasionally been known to breed in England, having the misfortune to belong to the "shot on sight" brigade.

A Change at Cockermouth.

Owing to pressure of private business, writes Mr. Oglethorpe, Mr. R. Litt, the Secretary of the Cockermouth and Dis. F.C., has been compelled to resign the office of Secretary. Some difficulty was experienced in securing a successor, but eventually the Chairman, Mr. Geo. Oglethorpe (Lorton, Cockermouth) offered his services as correspondent until the time of the show, when other arrangements will necessarily be made, as Mr. Oglethorpe resides some considerable distance from town. Mr. Tiffin kindly undertook the duties of Minute Secretary. Cockermouth Show will again be held in the Old Tweed Mill, one of the finest rooms in the North, on December 6th and 7th.

The Yorkshire Union.

A meeting of the Council was held at Bradford, June 15th, Mr. Battye in the chair. Mr. Greaves, Vice-President, was also present. Twenty-two societies were represented. The tender from Mr. Geo. Hargreaves, Eccleshill, for the supply of the uniform perches for show cages, at one penny per set of three, was accepted, and all orders may be sent to him. It has proved beneficial in the past for secretaries of societies to order a quantity for distribution amongst their members, thus saving considerable correspondence and expense. The teapot (value 30s.) and two medals, offered by Mr. J. W. Ramsden, for competition amongst the members of the Union, were accepted with thanks. Eighteen societies have expressed their intention of holding open winter shows, and the dates and judges were drawn by ballot. These will be sent on for publication as soon as replies have been received from the judges, probably for next issue. The tender from the office of "Fur and Feather," for the printing of 1,200 Union handbooks, was accepted. It was agreed to issue the folding cage label to societies in the Union, for use at members' shows, charge of 6d. per 100. In accordance with rule, a sub-committee of seven was appointed to transact any urgent business not of such importance as to demand the calling together of the whole Council. Messrs. R. Sutcliffe, T. Ogden, J. Townend, J. E. Clark, E. Padgett, H. Simonett and T. Clegg form this sub-committee. The thanks of the Council were heartily tendered to Mr. W. H. Shackleton for his generous gift of a 50-guinea challenge trophy, as reported in your issue of May 11th. As a tribute of their high esteem and deep respect for the donor, the members of the Council decided that this trophy, formerly called "The Yorkshire Amalgamation Challenge Trophy," should in future be known as "The W. H. Shackleton Challenge Trophy."—FRED HAMMOND, Hon. Sec.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

*Oct. 4 and 5.—**Burnley** (J.H.R.)
*Oct. 10.—**Peterborough C.B.A.**
*Oct. 11 and 12.—**Great Harwood** (J.P.H., D.B.)
Oct 12.—**Broughty Ferry C.B.S.** (J.K., W.W., C.C., P.P.)
Oct 12.—**The Original Crook C.B.S.** (H.W.B.)
*Oct. 16.—**Exeter & Devon P.P. & C.B.S.** (J.H.P.)

Jan. 1 and 2, 1908.—**Scottish National C.B.S.**
Jan. 1 and 2.—**Dunfermline & West Fife O.S.**
Jan, 8 and 9.—**Wimbledon C.B.S.**
Jan. 14—**Llanelly C.B.S.**
*Jan. 31.— Feb. 1, 3 & 4.—**Great National (Crystal Palace) Show**

(Secretaries desiring the initials of their Judges inserted, should forward same on at once.)

An Honour.

The subjects engraved on the four new cups of the Sheffield Cage Bird Society—a Yorkshire, Norwich, Crest and Linnet—have been taken from plates issued by CAGE BIRDS. The cups are to be on view at the Nest Feather Show, Montgomery Hall, on June 29th.—T. BISHOP, Sec.

Southern Yorkshire C.C.

At a committee meeting of the S.Y.C.C., held June 17th, we are informed by Mr. R. L. Crisp, the President, that the resignation of the Hon. Secretary, Mr. R. P. Broome, was considered and accepted with great regret. The second in the voting at the recent general election, Mr. J. W. Rennie, will take up the vacant office. Mr. Rennie's positions as auditor and London committeeman will be filled up respectively by Miss A. B. Craddock and Mr. W. Maybank, who came next in the voting for these offices. Mr. Gladwin presented the club with a handsome silver cup for competition amongst the members.

SCOTTISH NOTES.

By St. Bride.

Ups and Downs of the Breeding Season.

The breeding season up to 15th June has been the most memorable on record for non-success in breeding Canaries, only three fanciers in my wide circle having reason to be pleased with the return for their labours. One of them is so situated that he can look in upon his stock at any moment of the day, his business being close at hand, which gives him a great advantage. He has a very valuable stock, and he has already got as many young birds as would satisfy the average breeder for a whole year's breeding. Another whose heart has been made glad has been very fortunate. He has an excellent strain, and they are well up in size. The third, though he has not done quite so well, has every reason to be proud of his progress and stock, and the outlook is bright. I wish these gentlemen and any others unknown to me who are doing well every success. They are all required. Indeed there is every prospect of Scotch Fancy Canaries being at a premium in price.

On the other hand disappointments are manifold. A, who has been a successful breeder for over a quarter of a century, has four young birds; his common lot at the corresponding date used to be 30 or 40; B has ten, which is not so bad, but he figured in years gone by very well; C has eight, and they are made up of odd birds here and there. In such a case the same results can never be attained as when full nests are reared. However, in these days fanciers have to be thankful for small mercies. D has had lots of young birds, but has not been able to rear many. Up to 13 and back to three and four has been his experience, and the latest report is four. E has had ups and downs and rests with four. F had the Derby bird long ago, but it has passed away, and he is waiting the hatching of another. Hard lines! But he is never dis-spirited. He likes to hear of the good fortune of others. G has not succeeded as he deserves. He has worked hard for the Fancy. He has not quite six, but there is a good one among them. It is the right stamp, and if spared it should give a grand account of itself. H has figured as a medal and cup winner, and I have just heard that he has close on twenty. He was in the company of fanciers last week, but gave no indication of his good luck. He is strong in type and plenty of shoulder. I, formerly 20 to 30, 1907 only three, one of them hand fed. J, with a first class stock, has a couple of young birds. The old birds are in excellent condition. K had the misfortune to lose several at the very start, which reduced his breeding stock to a minimum. He has four young, one of which is a very promising Green hen, and he has a full round of eggs set after the hens taking a rest in laying. L has only four, though he has worked hard, tending to them and gathering green food. M possesses a good stock and has had a lot hatched, but the measure of his success is what seems to be standard, namely four. N commenced with high hopes, having a grand stock, but he has not a single young bird. O had to remove, and that spoiled the breeding. He has one young bird, but now that he has got settled he expects to get a few. P has had a run of ill luck. He has no young, but he is still hoping to rear a few. Q, well-known has a successful breeder, but has only three. R, owner of an extra good lot. He has two Fancy, and a large selection of Common young. S, a fancier who has persevered against adverse breeding for years without rearing a young bird, has four doing for themselves. The season has favoured him. I have not given names because objections have been raised against the publication of same. Certainly there are strong objections to a particular breeder's stock being praised up before they are tested. Generally speaking, trumpeting does not help either the trumpeter nor the trumpeted.

Attention has been invited to office being held by non-fanciers. All things equal it is certainly preferable that gentlemen holding office should be actively engaged in the Fancy, and be breeders and possessors of stock. The best results are to be derived from practical, interested office bearers.

Judging from the attendance at the City of Glasgow Ornithological Association on Saturday evening the Scotch fanciers are lacking in the interest of former days. The practice is to neglect the meetings, and when the show comes round there is no end of grumbling. It would be business-like to attend the meetings and voice the needs of the hour. The proceedings were somewhat heated, but it is satisfactory that the result of the vote determined that the MacLean Cup should remain for competition in the City of Glasgow Association. It was retained by a majority of one I understand.

The Southern Albert Club retains its vitality. It continues to grow, and beyond all doubt is one of the best clubs in Glasgow. By way of helping beginners papers are being given, and the one read by Mr. McQuillan was practical and useful. It is surprising what can be done when an effort is made.

The Norwich, etc., section Fancies have been admitted into the Govanhill and District Club, which has helped to swell the membership, and by another year it is expected the membership will be considerably augmented. Rome was not built in a day, neither can the Govanhill and District Club be built in a day. But its erection will come.

The Scotch Fancy Canary National Derby Ornithological has just closed its membership, and it is stated that last year's record is all but maintained. The Secretary mentioned that between 20 and 30 of last year's members have from various reasons given up the breeding of the Scotch Fancy Canary—a serious depletion. A valuable member of the Maryhill Club, the Glasgow (confined) Derby, the National Derby and other Associations, Mr. McKissock, is being lost. That gentleman sails on 29th June with his entire family for Canada. For the present he will leave his Scotch Fancy Canaries in this country, but should he see his way when he gets settled in the land of his adoption to keep them he will send for them, and do what he can to establish the Scotch Fancy Canary in Canada, to where large flocks of our countrymen have gone. Mr. McKissock had but to be known to be appreciated. He is a general favourite, and his colleagues wish him and his house every prosperity.

The weather has a lot to do with the failure in Canary breeding. Pairs which would rear anything in 1906 allow the young to die. Persons who condemned hand rearing have been obliged to resort to it this season, and, strange to say, the system has been wonderfully successful, and the young have thriven. Put to it, and what seemed impossible can be done. "Never venture, never win."

In rambling it is astounding the pairs that are mated, consisting of British Birds for Hybrids. They are late this year, and while they have been amusing themselves building nests, and tearing down the nests, but few eggs are reported. But they will come. The chief difficulty in most aviaries will be to have the eggs tested, and where fertile to get the young reared, so many of the foster parents being exhausted with the very bad weather. No doubt the cold weather and lack of sunshine has a great deal to do with the experiences of 1907. It is possible the second part of the season may be better adapted for breeding, and that it will yet make up for the past bad behaviour. In a future article I hope to be in a position to give a more encouraging account of progress.

MOULTING: COLOUR FEEDING.

These Important seasons are fast approaching.

CLAUDE St. JOHN'S

CANARY BREEDING FOR BEGINNERS,

PRICE - SIXPENCE

(through any newsagent),

Will give you just the very hints you want to carry you through successfully.

116 Pages.

MANY HELPFUL ILLUSTRATIONS.

A thoroughly practical up-to-date Guide to the cult of Canary Breeding. Specially designed for the use of the Beginner in the Hobby. All about Cages (single and double breeders) and fitments, the Birdroom, First Principles in Mating, Incubation, Egg Food, To Rear Without Egg, Hatching Difficulties, Sweating Hens, Bad Feeders, Marking and Marking Rings, Young when Weaned, Hot Weather Management, The Moult, Colour Feeding, Moulting Cages, Training for Show, etc.

A BULKY AND VALUABLE VOLUME.

Copies, post free, 7d.

"CAGE BIRDS," 154, FLEET STREET, LONDON.

Are Erratic Judges Most Popular?

At the recent Southern Norwich Plainhead Club meeting, the discussion turned on judging to standards. This led to a humorous little interlude, during which several laughs were squeezed out of the long-suffering fraternity that officiate at our shows. One judge who was present advanced the opinion that the erratic judge tended to draw the largest entry, because fanciers could never be certain what he would or would not do, consequently the awarding of the prizes became something of a lottery, and there was a wider chance of getting into the money. He was, of course, immediately asked what sort of an entry he himself drew on the average?

THE CANARY BREEDING SEASON

Is now in full swing, and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries:—

House's Canary Manual

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL."

The following Summary of Chapters, etc., will show you how completely the ground is covered —

Aviaries and Cages.	The Young Birds.	Young Birds Dead in Shell.	Exhibiting.
Show Cages.	Food for Nestlings.	Red Mite.	Diseases treated very fully.
Perches.	Hens Refusing to Feed.	Clear Eggs.	Every variety of Canary is treated
Breeding Canaries.	Sweating Hens.	Moulting.	upon at length and illustrated

MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

ILLUSTRATED IDEAS

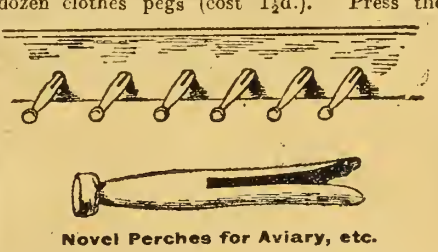
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, birdroom or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 111.

NOVEL PERCHES FOR FLIGHTS AND AVIARIES.

Sent by W. Askew, 18, Strattondale Street, Cubitt Town, Poplar.

I enclose a method of fixing up perches for an aviary. Nail a piece of 1in. batten (or board) to the side or the back of aviary, or in any desired position, and drill ½-in. holes through it. Then buy from any oil-shop two dozen clothes pegs (cost 1½d.). Press the



Novel Perches for Aviary, etc.

prong end of the pegs together, and push them into the holes, when the prongs will expand and hold fast. The pegs look very well and neat in an aviary, and if you get an extra number you can draw those in use out at any time and fix in a set of clean ones. —W. Askew.

No. 112.

A NON-VIBRATING NEST HANGER.

Sent by J. V. Sullivan. 132, Carrington Road, Stockport.

I enclose a sketch of a handy nest holder that will not shake about when the birds perch on the edge. After cutting hole for head of screw or hook (to hang it up by) in

A Non-vibrating Nest-holder.

back piece, screw this on to the crosspiece holding the nest-pan. Then screw the nest-pan down, with a piece of leather between the head of the screw and the inside of the nest pan, to prevent the latter chipping. It can be hung on to a hook fixed in the back or side of the cage. I have used this contrivance for two seasons, and find it answers much better than the wire hangers, as there is no possibility of vibration. —J. V. Sullivan.

You MUST Read the Back Page This Week.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** 154, *Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons—**J. North.** Miscell.—**"Old Judge."** Border Fancies—**J. CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Loss of Young.

G.B.—I think if you had let your young birds have had a little egg food, instead of feeding them on milk sop, you would not have lost them. Let the next lot you have have a little egg food until they are right through the moult, but put in more biscuit or bread (whichever you use) than when the old birds are feeding them. Put twice the weight to one egg. If your birds had, as you thought, a little inflammation, then your treatment was right, if taken in time.

Implicating the Male.

E. Young.—The fact that you have had three successive nests of young die from three different hens, at the same age (about a fortnight), and all by the same cock, and some with food in their crops, leads one to the natural inference that the cock comes from diseased stock, more especially as you say one of the hens has reared up five this year, but by another cock. I at first thought that the hens were again eager to nest and, not having the cock with them, had deserted the young. But the fact of the latter dying with food in their crops negatives that supposition. Should you rear any young by this cock, I should advise you not to keep them for stock purposes, as they will only breed you a lot of trouble.

Treatment of Young.

F.H.—I think your using the food you did, instead of the egg food (that is, hard boiled egg mixed with crushed biscuit or bread crumbs), was the cause of your hen not feeding properly. Judging from your letter, everything points to this. Next nest let her have egg food, and I think she will feed them. Do not interfere with her young. If she will not feed, you can do no good by taking them away and attempting to hand-feed them at a few days old. Give plenty of green food, ripe chickweed, if you can procure it, and supply crushed hemp seed ad lib. You may let the hen have a bath at any time on a warm sunny day. The young may have a bath given them as soon as they are able to fly. Half fill a 2 in. deep vessel.

Always Moulting.

Notts.—As you do not say under what conditions you keep your bird, I am somewhat handicapped in giving you a satisfactory reply. If you are keeping it in a window, or in a warm place immediately above the gas, then remove it at once to a corner quite free from any draught, and at night time cover over the cage with a warm cloth. Give in the drinking water, fresh daily, ten drops of tincture of quinine, and three times a week give a small teaspoonful of egg food, to which add six drops of Parrish's Chemical Food. You may continue this for a month. Give, two or three times a week, a spray or watercress and a leaf or two of dandelion. You may also give occasionally a small piece of sponge cake, over which drop a little best sherry.

Showing Young Birds.

Novice.—I am afraid your young birds (which you say are now seven weeks old) will be too old to show at a First Feather Show on July 13th. If they have not commenced to moult they will—unless you live in the country or in a town where there are no factories—have lost the bloom of youth. They will, however, no doubt be in moult, and it would be useless showing them then. No, it is not necessary to colour feed them from the nest to be able to show them at a First Feather Show. The colour food you name is not of sufficient strength to bring birds out high enough in colour for the show bench. You want red feed. Use the best tasteless pepper you can procure, to which add to each pound 2 oz. of the finest Natal.

Mating and Buying.

W.M.C.—It would not be too late to have a nest from your bird if you could procure a mate at once. You will want to be careful in procuring a hen; see that you do not get one that has been tried and found wanting in some essential point. Untried hens will be hard to find just at this time of the year; but perhaps you may happen to know where to get one. If so, get her at once, and as you say your male bird is in such high condition, you may be successful in getting a good nest. The young birds you see advertised at 4/- and 5/- each would, of course, do for breeding with next season if you only wish to breed ordinary birds; but if you wish to breed something out of the common and fit to put on the show bench, then they would not suit you. I should recommend you to wait until about next November, and procure a pair, or pairs, from a good reliable breeder at a fair price. It will, I feel sure, pay you much better in the end, and will give you much more satisfaction in every way.

BORDERS.

Answered by J. PATTERSON.

Treatment of Young.

J. Donald.—Please look over my answer to "Sammy" in last issue, and treat your young birds in the same way. You could not have done better than to run them into a nursery cage, where their parents will feed them through the wires. It is seldom one finds that they continue to pluck them after adopting those measures to prevent them. You might try some coarse grass thrown in the cage bottom; also hang up a nest bag for her to line her nest with, which may help her; but I am afraid she pulls the feathers out more for to suck the blood from the quills. If so, you must let her have a piece of mutton suet, placed between the wires, thrice weekly until she has laid, and occasionally as long as she is sitting, as this habit shows she is seeking something in the way of animal food. (2) If your young birds tails are already pulled out, as I take you to say, you will have no occasion to again pull them, as this is simply done more to increase the length of such, so as to make them more proportionate, as their young tails are never so long as their second growth. The best time to do this is just when they break away in the moult. Take the two outside ones, first pull them inwards, but see you have the thumb and fingers of your other hand held firmly on the base of rump; then take all the rest together in a straight direction, or you may find their tails twisted when they grow again. (3) For moulting let their staple food be the best Spanish canary seed. Every other day a half teaspoonful egg food per bird; on the alternate day let them have the same quantity of the following seeds, well mixed:—Maw, hemp, linseed, gold of pleasure, inga one part each, and two parts German summer rape. You may vary the rape occasionally by giving it scalded. They are kept in show condition by proper treatment and perfect cleanliness. Unless a bird be of good quality they are not easily kept up to the perfection seen in a first-class specimen, so you must first of all breed for it; after that there is not so much difficulty in keeping it.

Hen Gone Wrong.

Todd.—I am afraid, from particulars you give, that your hen has gone into a false moult, the result of being egg-bound with her first nest. Such cases have been frequent this cold spring, and many hens have succumbed. You ought to feel thankful you have her alive instead of being disheartened; no doubt it is a disappointment not to get any young after having paid a large price for her, but as long as she is alive you must hope for better luck next season. I doubt if you will be able to build her up this year. (2) Feed her on good Spanish seed, with a third of German summer rape added every other day; on the other days half a teaspoonful of egg food, with six drops chemical food added; let her have a pinch of the mixed seeds as advised to J. Donald, and five drops each of tincture of quinine and steel, every other day for a fortnight, in her drinking water. Keep her out of all draughts, and be sure to air your room every morning, and if you should not get her into breeding condition she should be in fine trim for the early shows.

LANCASHIRES.

Answered by S. R. COMPSTON.

How Many Kinds?

A Beginner.—There are only two kinds of Lancashires—Coppies and Plainheads. A bird may be double Coppy bred, which means that the parents were both Coppies. Double Coppying is done with a view to improve the Coppy, and, in theory, the result should be a good young Coppy; in practice the result is a rough-headed youngster, with the appearance of having too much feather in the coppy, and stubby looking. Sometimes a good Coppy is bred from two Coppies, but, as a rule, they come as above described. Pairing a double Coppy-bred bird to a Plainhead is all right, and a very likely way of breeding good-headed youngsters. A double Coppy-bred bird makes a good stock bird.

LIZARDS.

Answered by BARKER CLEGG.

Light Coloured Legs.

Nero.—You need not trouble yourself about your young birds having light coloured legs. It is quite an ordinary feature in many strains. They gradually assume a darker shading whilst going through the moult. Certainly, there are other strains of birds that claim dark legs as a speciality. Anyhow, you need not apply an artificial treatment. It is quite unnecessary. The qualification of black legs, etc., may be a deciding property when two birds appear otherwise of equal merit; still, the margin of points allowed by the standard is only five, so you can rest yourself content for the present and wait developments. You tell me the youngster appears fairly good in cap and colour, so I must say if the colour of the legs is the only fault you find with them you should be very well satisfied.

ROLLERS.

Answered by "SCHOOLMASTER."

Improving the Song.

Beginner.—Where you are simply breeding singing Canaries, there are several ways in which their song may be improved. It is not necessary to cage off the young cocks singly; they will do altogether if thrown into a big flight or flight cage. But they must not be overcrowded, and any very quarrelsome or feather plucking youngsters must have cages to themselves. If any of the old cocks you are using for breeding have a faulty song, "chopping" a lot, or singing harsh, or too shrill and high tours, the young birds ought not to hear them. The ideal would be to have a room for the young cocks in which one or two old cocks with good song were kept as tutors. Of course, this can't always be managed, but faulty tours and notes will be picked up by the young if they hear them. You can get variety into their song by training them under one or two good British birds, the best of all being the Blackcap Warbler, which has a very round, mellow, flowing song. Then comes the Woodlark, the Blackbird, the Linnet, and the Skylark, while a good Goldfinch can be useful. The Skylarks (you can have two or three of them) should be hung outside the bird room, somewhere near the window; the Blackbird will do in the same position. The others would be kept in the bird room, but you want to pick the right sort of Linnet, as some sing a very wooden song, others being much more mellow. Young singing Canaries pick up some nice notes from the above birds. Don't have any Sparrows about the room outside; if they build nests in the spouts, etc., pull them out and drive the birds away. Their chirps and calls spoil any Canary's song. Of course, Rollers for contest singing can only be trained in the usual way, under a first-class schoolmaster, and by a bird-organ.

Separating the Young Cocks.

J. Rees.—In Roller Canaries, as they are not bred for colour, it is not so easy to pick out the cocks from the hens, and it is very difficult in the young birds. But there is one easy method, and that is by watching the young birds and noting those that are trying over their song. It is a great help to have a peep-hole in one's bird room door, through which the birds can be watched without them seeing you. Or there should be some place in the room where one can hide, or something one can get behind. When the young cocks are in the flight cage, or flight, they soon begin to warble a few notes of their song, and the young cocks can be seen sitting about with their heads up and throats working away as the notes come out. These should be noted and run into a flight, etc., kept for young cocks alone. You won't make many mistakes in the sex if you follow out this plan. It is best, though, not to part until after the moult with those put aside as hens, for it is quite likely one or other may turn out the other way about.

Going Wild.

Boltonite.—I don't find myself that putting the young Rollers into flight cages makes them "go wild." I think it depends far more on the way the owner handles his birds. Some move about in the bird room and do the work in such a rough fashion as makes any birds nervous. All feeding and cleaning operations should be performed as quietly and unobtrusively as possible, while the owner must never rush round the room or throw his arms about, as I have seen some bird keepers doing. If you leave a nursery cage, or a Yorkshire show cage, hanging on the doorway of the flight cage, the young will go in and out of it (especially if you occasionally put a little maw seed, or piece of ripe apple, therein) and will then be less nervous when you eventually cage them off in their small singing cages. Give a whistle of a few low notes whenever you enter the room, and talk to the birds in a low voice when attending to them, and they'll soon begin to know you, and whistle back to you.

Pairing Questions.

Nil Desperandum.—(1) Glad to know my advice has proved so beneficial. Five strong young birds from five eggs is excellent, and I trust you will continue to do well. Roller breeders never think about the colour of the birds; it is all the song. If your birds are not for contest purposes, you could improve their colour very much by introducing a small splashed, or rich clear yellow Yorkshire cock into your strain, pairing up with your Rollers the season after the best coloured young bred from this mating. (2) You could not a yellow Border Fancy cock. (2) You could not expect to breed clears from a foul marked green cock. If you paired a clear cock to a clear hen, then you would be practically certain to get some clear youngsters—a good many if their parents were themselves bred from un-marked birds. It would be difficult to breed clear yellow Rollers of good strain. It is only amongst the commoner qualities (not contest strains) that yellows are found plentifully. A certain way to breed yellows is to pair a yellow cock to a buff ben bred from two yellow parents. (3) If the wing-ticked hen is bred from clears, you are certain to breed some clears from her when mated to an unmarked buff cock—in any case, no matter how they were bred, they are sure to throw lightly-marked young, with, probably, some quite unmarked. You want to know something about the pedigree of birds to decide these things. I certainly advise you (and all other readers) to get CAGE BIRDS "Stock Book," which makes it easy and simple to pair up any birds, because in its pages you can always trace how they were bred.

Rape Seed Samples.

West London.—In my own opinion all three samples are good ones of summer rape seed. None is harsh to the taste, and all look well matured. Of the trio I should myself prefer No. 3, the darker sample, which is more the character of seed chosen by German breeders. It looks in very good condition. No. 1 seems a nice sweet seed, but the sample I have contains many broken, bruised, and otherwise damaged grains, and if a fair criterion of the bulk, I should pass it over on this account. No. 2 is remarkable for the uniform size of the grains. I doubt if you could go very far wrong with any of the samples.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Canary Off Song.

I have a Canary which has lately been off song. He is paired. I have tried the usual remedies for loss of voice. He is not moulting, and there are no red mite.—C. MELHUISH.

C. Melhuish.—It is not at all unusual for birds to go off song during the breeding season. I am afraid you are worrying yourself about nothing. The bird is otherwise in a normal condition. You ask what you are to do. Simply follow the ordinary treatment. When the breeding season is over your bird will doubtless moult, and then sing away as lustily as ever. If you want to enjoy his song now you must take him away from the hen.

Norwich Hen Lumpy.

Hen paired up, but last week seems to have gone all wrong; sits in a lump, and is constipated.—BEN JONES.

Ben Jones.—You fail to say how you are feeding the hen, or where you are keeping her. Has she caught cold owing to being in a draught, or owing to being subjected to extremes of heat and cold. In the absence of details of management it is somewhat difficult to advise. You should try giving her a small quantity of freshly-made milk sop morning and night, and cover it with half a dozen drops of syrup of buckthorn. Instead of her ordinary seed give German summer rape each day, and every other day a little inga seed, also two or three fresh dandelion leaves twice a day.

Old Birds Breathing Heavily.

I have a pair of Canaries. Can you tell me what is wrong with them? Before pairing I saw the cock was troubled with heavy breathing. The hen was all right with the first nest, but she also breathes heavy now. Will the young be affected?—R.L.

R.L.—It is not easy to say if the young will be affected or not. But they are most certainly likely to be weak in their lungs, and thus predisposed towards the same complaint, which I should say is asthma. You can do nothing to alleviate the trouble whilst the old birds are feeding young ones, but immediately the next nest of young are away from the hen I should advise you to give them, that is, the old birds, 10 drops each of paregoric and syrup of squills in their drinking water daily; also let them have a piece of beef suet to peck at continually. To build up the strength in the constitutions of the young birds, and thus render them immune to the effects of the disease, you should immediately commence giving them a little Parrish's Chemical Food in their drinking water daily, just enough to make it a nice rosy pink.

Not Feeding Young.

H.T.—I am very sorry to hear that you lost the young. You might try the old birds again. It is possible they may feed all right the second time. Most certainly you may try the cock you mention with two hens if you think they will do better. Myself, I prefer the birds in pairs. Still, many make a practice of running two hens with each cock.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

A Cold; and an Aviary.

Beginner.—Goldfinch, Bullfinch, Siskin, Linnet, Twite, and Redpoll would no doubt agree quite well with your Canaries and Mannikins in the outdoor aviary. You must not overcrowd it, however; pity you did not state its size. Your question: What will happen if they eat each other's food? made me smile. I reckon about the worst that will happen is that the food will disappear. Canaries need a change from plain canary seed now and again, such as some summer rape seed every other day, and a feed of mixed seed (some maker's packet seed if you like) once a week. An occasional feed of maw seed is also excellent. Chickweed, groundsel, and watercress are all right as green food—the former preferred, especially that which is full of seed, and it is plentiful now. You certainly must not soak it in tonic, or cough stuff, or whatever the medicine is—I never heard of such an idea before. If you don't know what is in the medicine, and especially if it has done no good up to the time of reading this reply, I should certainly drop it, and try a simpler, known remedy instead. Mix glycerine and honey, equal parts, well together; then stir a small teaspoonful into two tablespoonfuls of drinking water every day. Keep the bird out of draughts, in a box cage hung in a cosy corner. A little egg food, or milk sop, every day would no doubt be beneficial.

A Pairing Matter.

Silver Fir.—I should not care to let my own Linnet and Canary go to nest in a cage which contains a cock Goldfinch. There cannot help but be an element of risk about such a proceeding. Still, you must please yourself; if you choose to risk it, all well and good. It is pure sentiment on your part, however, which leads you to conclude that the Goldfinch will "pine and die" if you take him away from the other couple. I'll wager he wouldn't care the proverbial brass farthing. Evidently he is not smitten with the hen, or he would contest the Linnet's right of possession; and that he has any undying (or ought I to say dying?) regard for the cock Linnet is difficult to believe. Cock Goldics are pretty selfish, as a rule. If you take the Goldfinch right away and let the other couple have the run of the whole breeding cage, you will stand much more chance of success. It is not at all necessary to disinfect a cage with boracic acid and hot water before commencing breeding operations. The cage is clean, I presume, and that is all that is required. If you give your Linnet canary, rape, and teazle seeds (all he requires), you will not upset your Canary hen. The two can have a little maw, hemp, linseed, and niger now and again. Hen Canarics need a more nourishing and stimulating diet when proceeding with domestic duties, and such will not upset them at that period. The safest remedy to give for a slight "upset" which you suspect is due to gorging on over-rich food (don't give the latter in sufficient quantity) is dandelion juice (taraxacum), which can be bought very cheaply at any chemist's shop. Stir half a teaspoonful into two tablespoonfuls of drinking water for a couple of days—fresh daily.

A Workshop Aviary.

No Name.—You could keep a nice assortment of British birds in the aviary you have erected in your workshop, 5 ft. by 5 ft. by 2 ft. wide. Its lack of width, however, makes its holding capacity rather small, for it is floor space, and not height, one wants more particularly in places of this kind. Twelve to fifteen small birds will be ample; stick to the lower number. I don't think I should put any hens in, if I were you. Try the following:—Goldfinch, Bullfinch, Linnet, Twite, Lesser Redpoll, Mealy Redpoll, Siskin, Reed, Cirl and Snow Buntings. Other possible inmates are the Chaffinch, Yellowhammer, and Greenfinch; but in the summer either of this trio is quite likely to commence knocking its neighbours about. Any bird, in fact, which is so unmannerly as to indulge in persistent "scrapping" will have to be removed. Individuals vary exceedingly in the peaceableness and otherwise of their disposition. Don't include above one member of the three last-mentioned birds; of some of the others you could keep two or three cocks. I don't see any reason why they should not keep healthy providing the place is damp and draught proof—joinery work done during your spare, or any other time, won't hurt them.

An Outside Aviary.

Ortsac.—Your aviary is not of sufficient depth from front to back to be an ideal place for outdoors. It should have a width of at least 4 ft.—5 ft. would be vastly better. In any case, it is not sufficiently large to turn varied couples in with hope of them breeding. To stand any real chance of the latter coming off, a place four or five times the length of your own is needed. Your aviary wants to stand much higher from (away from) the ground than is shown in your sketch, and also to be boarded up for another foot, or foot

and a half, of the front, at the bottom. The top eaves (front and sides) should overhang considerably. All these precautious are necessary to prevent the place getting swamped during very wet weather. The floor, on the same account, should slope somewhat from back to front, and a small outlet or two should be provided for any water which might, notwithstanding all safeguards, find its way within. As it stands at present, 4 ft. long, 3 ft. wide, and 4 ft. high at front by 5 ft. 6 in. at back, the aviary will hold twelve small birds comfortably; two or three more at a pinch. They would winter in it (hardy kinds) safely, if well protected through any great stress of weather. Its south aspect is all in its favour; more especially so if you can shade it from the rays of the midsummer sun, which make places like yours very trying if allowed to beat down upon them unhindered. If you hanker after breeding something, turn in five or six hen Canaries and three or four cock Finches; or try two pairs of Linnets, and one each of Redpolls and Siskins. You could try one pair of Linnets and one of Goldfinches, if you choose. I never recommend "mixtures" of seeds for aviaries; such are most wasteful, and consequently most expensive. Give the chief seeds (canary, hemp, rape, teazle, and sunflower, for instance) in separate dishes. The other seeds vary from time to time, in another dish or dishes.

Four Mixed Ones.

(1) Is it true that birds sing best in separate little cages? (2) Will the sight of a hen with her mate in another cage interfere with the song or health of the birds in my aviary cage? (3) In a large aviary cage, with a little Nutmeg Finch, I have put a Goldfinch, a Linnet, and two Canaries, all cocks. They agree very well. Can I expect them to do well as songsters? (4) What British cock birds will agree in an aviary with a Chaffinch cock? —W.H.P.

W.H.P.—(1) It would not be altogether true to say that birds sing best in separate "little" cages; if you had said in "separate cages," then I should have replied that, on the whole, such a statement was correct. Most species undoubtedly sing more freely when caged alone in a suitable stock cage. I do not know that this means all birds are more happy in a cage by themselves—though most certainly this can be truly said of many species—but they have less to distract their attention, and no one to quarrel with or to quarrel with them, which is of weighty importance sometimes. (2) It certainly happens that the sight of a "married couple" occasionally upsets neighbouring birds condemned to single blessedness. To give an instance: Many a fancier has lost a Mule or a Hybrid through keeping it in a room amongst breeding birds. As I have heard it put: "They sing themselves mad." In short, they get into so rank a condition through seeing others tasting of, to them, forbidden fruit, that they collapse, and leave the fancier perplexed as to the cause of their sudden demise—unless a show of blood is there to explain the riddle. (3) I have no doubt your birds will sing quite well in the aviary. But in the breeding season, when one cock sings, he is apt to get worked up into a frenzy, and so "go for" all the other males within reach. You'll find this out when you've been in the Fancy a short time—especially if you keep hens anywhere in the same room. In the winter all would no doubt run smoothly. (4) It is the Chaffinch which interferes with the other birds—not the other birds which interfere with Master Chaffie. It is in the spring and summer when they are most aggressive.

A Judging Puzzle, etc.

(1) What time ought you to pair up Bullfinches? (2) If, in a mixed Hybrid class, a Bullfinch-Canary and a Goldfinch-Canary were exactly equal in points, would the judge put the Bullie 1st because it is a rarer bird?—COMPANY.

Company.—(1) I don't quite grasp the purport of this question. The Bullie's breeding season in a state of nature commences somewhere about the end of April or beginning of May—he is very late compared with some species. In a cage he can be kept with a hen all the year round if one chooses; on the other hand, two Bullies can be paired at any time during the course of the months covering the proper season for breeding. As a matter of fact, I believe the Bullie mates for life when in its natural state. If this reply does not convey the information you seek, write again, and put your query as explicitly as you can. (2) This is a teaser, and to properly thresh out the case in all its bearings would find the printer sufficient "copy" to fill a page—and if I did that, of course, I should have the Editor using his heaviest ruler on my tender body. To put it briefly, however, if a judge had a Canary-Bullfiuch and a Goldfinch-Canary under him which were exactly equal in exhibition merit, be would put the former first on account of its comparative rarity. But it is very difficult to imagine such a case arising in actual practice. Then, again, one could get a certain sub-variety of Goldfinch-Canary quite as rare as the other Hybrid (rarer, if the latter go on being bred at the same rate as at present). I refer to a clear yellow Goldie-Canary. Suppose the poor judge ran up against an extremely fine specimen of this sub-variety—very large and shapely, and teeming with colour—and it had opposed to it one of the finest Canary-Bullfinches ever seen, which do you think he would put first? Mind you, I offer no prize for the correct solution. I can't afford it with the summer holidays looming ahead.

Rather Unorthodox Methods.

I have put a Thrush's egg, which seems fresh, under two Doves. If it hatches, what must I do? I have a friend who had two Thrushes squashed by a pair of Doves. Is it safe to put any more under? Would Thrushes or Blackbirds do best with the Doves in an aviary 4 ft. by 7 ft. and 5 ft. high, sloping down to 2 ft., or in a fair-sized cage? When hand-rearing, is much heat wanted? Is an old nest, or basket with flannel, best to keep the nestlings in?—J.L.

J.L.—I tried desperately hard to keep from laughing when I read your letter—it is such a serious matter for the poor little Thrushes. But I had either to explode or burst (not quite the same thing in this case). I certainly never heard of Doves being asked to rear the young of Thrushes, etc., before. Do you not know that the parent Doves feed their young in an entirely opposite manner, so to speak, to the parent Thrushes, and on entirely different food? The latter, broadly speaking, are purely insect feeding, while the Doves feed purely on grain. Further (and again broadly speaking), young Doves put their beaks into the mouths of their parents and take the food thereout; young Thrushes etc., have their rations deposited right into their mouths by papa and mamma. Possibly the old Doves you mention squashed the two young Thrushes as ingrates for declining their well meant attentions; or possibly the two young Thrushes squashed themselves in an endeavour to get through the bottom of the nest to avoid the seemingly diabolical attempts of the Doves to swallow them whole. Whichever way it may have been, I certainly should not try the experiment again. I should think Thrushes would do better than Blackbirds in your Dove aviary; still, the latter might turn out equally well therein. Thrushes are less inclined to be aggressive, as a rule. A large cage is, of course, excellent for them. (2) I like to keep nestlings in the original nest, if at all possible. A basket well protected with flannel is an excellent thing to place it in. It certainly need not be kept very warm, but reasonably so. They seem susceptible to cold if forced out of the nest too early; keep them cosy at the period they hop out of it.

Half Wings, Half Tail.

I have a hand-reared cock Thrush, and since his last moult the feathers in his wings and tail have only just shown through, and do not grow any more, although his body is well feathered and he is singing well. Kindly tell me if there is any remedy.—PIN FEATHERS.

Pin Feathers.—It is very difficult to say what is the cause of stunted feather growth of this description. The most obvious explanation one can offer is that there was an insufficiency of feather forming elements in the blood during the period the bird last moulted. But I have known Crest breeders troubled with this complaint when, to all appearances, that state of things could not possibly obtain with their birds. Another explanation might be weakness in the bird—which he has since recovered from. Bad feeding—diet not sufficiently generous—might be the predisposing cause of any or all of the conditions likely to result in arrested feather production. You do not say how you were, or are now, feeding this bird. In our last issue (reply to "Novice") I outlined the correct way, however, so you need not go wrong on this point. To get back to the feather trouble, you cannot, I fancy, do anything to remedy it now. At the next moult, though, the feathers should certainly be properly reproduced, providing the bird keeps well and you feed it aright. While it is casting its coat, mix a little Parrish's Chemical Food (or syrup of hypophosphites) amongst its food every day. Commence with two or three drops only, and gradually increase the quantity to a small half-teaspoonful. This medicine is rich in those elements which go to make feathers, etc., and is an undoubted help to such birds as require it. Further, I have never yet experienced difficulty in getting a bird to take it; most seem to positively relish it. By all means let your bird have an opportunity to bathe when moulting, choosing a right day for the purpose, of course—not a cold, rainy one.

Take Punch's Advice: "Don't."

I have a nest of Spotted Flycatchers in the garden. If I cage them can I bring them up? What food would they require?—SAMBO.

Sambo.—I feel sure you will pardon me being blunt, but your question leads me to believe you are not experienced with birds (otherwise you would know the kind of food Spotted Flycatchers require), and consequently I can only strongly counsel you not to attempt to rear these young birds. It is only likely to spell their doom if you do, and Flycatchers are much too useful and inoffensive to be lightly sacrificed. Only a fancier of great experience, and with every facility at hand in the shape of foods, etc., can keep adult Flycatchers alive for any lengthy period—they are both delicate and difficult to cater for—so naturally I could not recommend a novice to try. That the young can be successfully hand-reared is quite correct. If you mix best quality ants' eggs (freed from all rubbish) with equal parts of crushed maizena wafers and hard-boiled yolk of egg (beaten up fine), you have a food which will accomplish this. At the time of feeding chop up some mealworms and add to the portion required, afterwards moistening it to a sloppy consistency (like cream) with new milk. The food must be always quite sweet and fresh, and now and again a pinch of powdered cuttlefish bone should be stirred amongst it. All the small flies and grubs you can capture, with smooth caterpillars, should also be given. Keep the youngsters snug and cosy. For general directions consult other recent replies.

Hand-rearing Bullfinches.

What food should I give to a nest of young Bullies? I am going to try to rear them by hand, and hope to be successful.—E. J. CHOLDERTON.

E. J. Cholderton.—I have answered this question many times this season, and it is a pity readers do not look up back issues, for it would save both themselves and myself time—to say nothing of space in this column. Here is an answer in brief. In our last two or three issues very many hints on hand-feeding will be found. Neither Goldfinches nor Bullfinches are difficult to bring up by hand, providing the two principal rules connected with hand-rearing are duly observed, viz., to feed a little at a time only from dawn to dark, and to keep the nestlings scrupulously clean. I don't believe in taking them from their parents at too early an age; let them show their feathers nicely before you remove them. The food to be used is the usual kind—that is, egg and biscuit. Crush two Osborne biscuits, and well mix with them the yolk and half the white of a hard-boiled egg, using a fork to do this with, one with thin prongs. When feeding take the required quantity of this mixture, and make it the consistency of thin paste (or of cream) with new milk. See that it is always sweet and free from the slightest taint of sourness. It must be made fresh at least once daily. A few small cut-up pieces of mealworm may be dipped in milk and popped into the nestlings' mouths pretty frequently; likewise any house flies you can capture should also be fed to them. As the youngsters grow, add a little soaked summer rape to the stock food, gradually increasing the quantity. Steep the rape seed in cold water, which thoroughly change every day. It will soon begin to germinate (burst), and is then ready for use, dabbing it as dry as possible in a towel before mixing it with the soft food. When they begin to pick up for themselves, wean them on to soaked rape, maw, lightly cracked canary and hemp seeds, hulled and broken up sunflower seed kernels, seeding chickweed, shepherd's purse, and groundsel tops. I have had them pick up ants' eggs with relish; in fact, I often mix some amongst the food I hand-feed with.

Hand-rearing Thrushes and Blackbirds.

I should like to have a good Blackbird, and have the chance to get a nest. Will you tell me next week the best food for me to feed them on?—E. MOSS.

E. Moss.—This is another query I find very difficult to "see the back of" at this time of the year. Believe me, I have answered it innumerable times. Here you are again, though. Look through recent issues, where you will find much appertaining to the practice of hand-feeding. Blackbirds and Thrushes are very easy to rear from the nest, and many people do so on nothing but bread and milk. Equal parts of stale bread and best ants' eggs (freed from rubbish), made very moist with new milk, would be a very fair food. To rear strong, lusty youngsters, however, the method I prefer is as follows:—Boil a fresh egg ten or twelve minutes, and, when cold, well mix with a fork the yolk and half the white into two crushed Osborne biscuits; add to this a tablespoonful of best ants' eggs (removing bits of stick and rubbish, if present), stirring all well together. Just before you feed, take the necessary portion of food and make it into a sloppy consistency with new milk. In hot weather (and at all times) be careful the food is always fresh and sweet. Feed a little at a time only, but very often, from dawn to dusk; and a feed after dark is not at all a bad thing. Cut a few mealworms into pieces, also, dip them into milk, and drop them into the nestlings' mouths. A great many fanciers add now and then a pinch of small, but sharp and gritty sand to the food; I often do so myself. It seems to act as a preventative of looseness of the bowels (or diarrhœa). Give also at all times flies and like small insects; and live ants' eggs if you can get them. Young birds want feeding once an hour (do not "stuff" them at any time) at first; every two hours or so at later stages. Cease hand-feeding when they cease to "cry" to be fed, and are picking up food for themselves. Keep them warm, cosy, and scrupulously clean. No special appliance is necessary for the feeding. I have used a large, blunted (with a pen-knife) match stick with every success; likewise a quill toothpick with all sharp corners removed. Put the food well down at the back of the tongue, and always be careful not to bruise or lacerate the tender mouths of the nestlings. Many birds are shy at "gaping" because the feeder unwittingly hurts their mouths.

Concerning Throstles.

H. Dryland.—I advise you to well mix with a fork half a hard-boiled egg (or, better still, the yolk only) into your Song Thrush's food one day, and on the next day to put in a good teaspoonful of finely scraped raw lean mutton or beef. Give these alternately for a fortnight or so, and you'll find him change for the better. Give six to nine mealworms, at least, every day. I think you are right in taking the young Thrush you have to be a Missel Thrush. The latter are considerably larger than Song Thrushes, and greyer in colour, especially on the back and head. In other respects they are, superficially, very like the Song Thrush; but the Missel is always more ash-coloured on the upper surface, and, further, has whitish spots at the end of the tail feathers. By-the-way, don't forget that the Song Thrush is very fond of ripe, fleshy fruit, so see that your bird has a supply as often as you can manage it.

Feeding Wrens and Flycatchers.

Please give me instructions as to the food, etc., for hand-rearing young Wrens and Flycatchers; also what to feed them on when they begin to look after themselves.—FLYCATCHER.

Flycatcher.—In another reply this week I have given a food which is suitable for rearing nestling Wrens and Flycatchers, and most of the small, delicate, insectivorous species. I have also therein said certain other things on the point which you would do well to take to heart if you have had no previous experience of hand-rearing birds. I will further say that such species as Wrens and Flycatchers are the very last a beginner at keeping Softbills should commence with; one needs to have considerable practical experience in this field ere he can consider himself competent to undertake their management. Their keeping and hand-rearing are most delicate tasks. The best food for Wrens during the summer is live ants' eggs (when one can get them). They need not be soaked (as I have heard said). In addition, all the flies, small grubs, and beetles, smooth caterpillars, and other small creeping things off plants and trees that one can get must be given them; most Wrens will freely eat tiny mealworms, too. Such a diet, of course, would suit the Spotted Flycatcher to a nicety. It is not everyone, however, who can get live ants' eggs in sufficiency, and the staple food has to be a first-class insectivorous mixture, composed largely of dried ants' eggs. Several of these, by-the-bye, are advertised in our columns. You can make your own, as follows: To three parts (by measure) of finely crushed maizena wafers, add the same quantity of the finest quality ants' eggs, and one part each of dried flies and ground silkworm cocoons. Store this in tins in a cool place. For use take the quantity required and make it crumbly moist by the addition of a little grated raw carrot or cold boiled potato, or you can use plain cold water or a little new milk. It is surprising how many birds relish ants' eggs, for instance, which have been soaked in milk; and I find all insectivorous birds like food moistened with it. The trouble, of course, is to ensure it always being fresh and sweet. Before giving the food to the birds you can add a liberal dash of flaked yolk of egg to it, varying this with the minced-up yolk of a hard-boiled fresh egg. If you are a "no-egger," add a small half-teaspoonful of Plasmon powder to the stock food before moistening it. In fact, this powder should be used independent of egg, for I find it most valuable with delicate birds. A little finely chopped fresh cream cheese is also relished now and again. But I am afraid I am running beyond "space limit."

Goldfinch Mule; bare Chaffinch.

W.J.S.—I should give the Mule a course of dandelion juice (taraxacum), which you can get cheaply from any chemist. Put half a teaspoonful in two tablespoonfuls of drinking water, fresh daily. Give this for two days in succession; then give four or five more doses, but on alternate days only. Let the bird have a good fly round the room every day. Feed him as plainly as possible—canary, teazle, and summer rape only in stock mixture, with a small teaspoonful of mixed hemp and maw seeds (equal parts of each) every day. A little milk sop would do him good, I should think; or a little of any good canary-cake, or bread. Or you could give a small teaspoonful of crumbled, very stale sponge cake, on which you let fall 5 or 6 drops of best sherry wine. On the whole, I recommend the latter. Only continued treatment will put him right. As regards the bare cock Chaffinch, my first thought was that the hen Bramblefinch had been mal-treating him—they will often attack and more or less strip others of plumage. Are you sure this has not happened? Your feeding, however, reads as though it would be very heating—hemp, maw, linseed, and egg food ad libitum every day, in addition to other seeds. It is not impossible, I fancy, that this diet should have something to do with the loss of feather.

Bullfinches Bred in a Cage.

I have a Bullfinch cock and a Bullfinch hen together in the house. They have some young ones, which were hatched on June 4th. I don't know how many, because I dare not disturb them. All bird keepers round about me say they have never known it before. I should like your advice. Both cock and hen are feeding well up to now.—J. TAYLOR.

J. Taylor.—I am pleased to hear of your success. It is a rare occurrence for Bullfinches to breed in a cage, but it is not by any means unknown, for a number of bird keepers have had a certain measure of success in this direction in the past. I agree with you in your decision not to disturb the young; you will see how many they total all in good time. I trust the parents will go on feeding, and rear them successfully. By the time you see this reply the youngsters will be (if still living) 17 or 18 days old, and thinking of hopping out into the wide world. Therefore, there can be no object in me telling you anything on feeding the old birds, for it would not be wise to alter or change the food you have used all along. I will say this, however, that you should gather and give them a liberal daily supply of seeding chickweed and shepherd's purse—it is to be obtained in fine condition now. The young birds will appreciate this, too, when commencing to feed themselves. Lightly cracked canary and hemp seeds, with maw seed and shelled and broken-up sunflower kernels, should also be supplied—all must be cracked fresh daily. A dish of soaked ants' eggs would also be appreciated—no doubt, too, by the old birds while feeding. A simple method of preparing them is to turn some ants' eggs into a saucer containing a little water, and press them gently down therein with the tips of your fingers. When soaked through, drain off the water, and turn the ants' eggs on to a sheet of clean blotting paper, to take off as much of the moisture as possible. They are then ready for the birds. If you are in a hurry, the last part of the operation can be dispensed with. If you can prepare them at least twice a day, the ants' eggs are much better soaked in new milk than water. Wash the dish after each supply.

An Interesting Batch.

(1) Is the ordinary red sand used by builders as good for birds as sea sand, and would this sand mixed with the coarse grit builders use be all right to put at the bottom of an aviary for large birds? (2) How long will an incubated egg keep? Say I found the eggs of Bullfinches, and took them home (which would mean perhaps two or three hours), and put them under a Canary, would the young bird in the egg be killed? (3) Will a hen Canary hatch eggs and rear young by herself?—THANKFUL.

Thankful.—(1) The ordinary red sand used by builders is certainly not so good for birds as sea sand of the right gritty description. Some sea sand, of course, is not gritty enough—like the builder's red sand—and this kind clogs and cakes about the birds' feet, etc., and about one's cages. It is really not "sand" at all that one requires, but small gritty particles, free from "dust" likely to turn to mud when coming in contact with excreta, or water. That which builders term "sharp sand" is most excellent for aviary floors, especially when some coarser grit is mixed with it. (2) If the Bullfinch eggs had not been sat on, you can safely keep them six or seven days without affecting them, by laying them on bran (or cotton-wool) in a cool place, and giving them a half-turn round every day. A fancier told me last week he hatched out a Chaffinch egg he kept fourteen days before putting under a hen Canary, and without turning it during that period; the youngster only lived a few hours. A partly incubated egg is a different thing. An interval of two or three hours would not hurt one, providing it were kept just warm and not subjected to undue shaking about. The longer an egg has been sat on, the longer (up to a certain limit, of course) it can safely remain uncovered by a hen. The germ in an egg which has been incubated only a day or so, soon perishes if the hen remains long off the nest. All hens sit tighter during the first few days of incubation than at any other period. (3) A hen Canary will certainly hatch and rear a brood by herself. Some, in fact, will not do so when a cock bird is left with them; this is uncommon, however. A good feeding cock bird is a great help, undoubtedly.

Advice in Brief.

Suitable Grit (F. B. Tonkin).—I have never, to my knowledge, seen the grit you mention, but I should think it would be all right when sieved. I think I would rather pin my faith to an accepted cage bird grit, however. It is against our rules to recommend any advertiser in particular, but if you study our advertisement columns you will have no difficulty in getting a good article. There are many good grits on the market.

A Bald Neck (J. N.).—This state of affairs seems fashionable with birds as well as with the gentler sex. I presume you are certain red mites do not trouble the Linnet? If you are not, then you should read the remarks under "Parasites" in CAGE BIRDS ANNUAL, and follow the treatment therein advised (or write me again on the point). If no red mites are present, then I do not advise you to take any steps in the matter, for the moult is now near at hand, and the feathers will then doubtless be reproduced on the at present bald place. You should not give Linnets niger and hemp seeds as a regular thing; they are too oily and heating.

Wild Seeds (G. Little).—The sample you send seems to be one of ordinary threshing machine screenings, or farmers' screenings, as some call it. I could not pretend to tell you of what weed seeds it is composed. I only recognise one or two. I am no botanist, and I don't suppose any botanist would undertake to name them all unless accompanied by specimens of the plants that bore them. I see no reason why this seed should not be given to a collection of British birds.

Concerning Blackbirds and Thrushes (Albert Baker).—You might have saved yourself a stamp, Albert, had you looked at my replies last week, for there at length is set out the feeding methods for adult Blackbirds and Thrushes; see reply to "Novice." Further, within the last two months I have told how to hand-rear these birds so often that I am positively sick of the question. However, I repeat the information briefly this week (see another reply). Be a smart boy in the future, Master Baker—look up your back numbers and save yourself money. Most young birds being hand-reared indulge in a "nap" during the day; it is not by any means a sign of ill-health.

Hand-rearing a Cuckoo (Baby Cuckoo).—The food you are at present treating the bird to—viz., hard-boiled egg and crushed Osborne biscuits, moistened with milk—will rear it quite successfully. Cuckoos are easy subjects. Cut a few mealworms in two, and give a fair supply daily. When it grows up, feed it on the stock food recommended "Novice" last week—or any good insectivorous mixture advertised in our columns—and prepared as therein advised. Cuckoos are practically purely insect-eating birds, remember, and any grubs, flies, caterpillars, etc., you can capture will always find a welcome. I don't think much of them, personally, as pets. They are gluttonous and uninteresting, and very apt to break their plumage, to say nothing of requiring constant supervision to keep clean.

Loss of Feather, Etc. (A. P. Abbeywood).—These cases of partial loss of feather are of frequent occurrence, and it is very difficult to assign any reason for them. Loss of plumage round neck and head is often attributable to red mite; but I presume this would not apply in your case. Anyway, I should not attempt any treatment (unless, of course, for red mite), for the feathers will be practically certain to come again at the moult, now probably close at hand. Note reply to "Pen Feathers" this week. Your other question will be found answered in the reply to "Flycatcher." Long-tailed Tits are difficult to keep in health for any lengthy period; far, far more fail than succeed in the keeping of them.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Sexing Grey Parrots.

What are the outward sexual distinctions in Grey Parrots?—J. FURBER.

J. Furber.—In adult birds the hen is usually darker in her plumage than the male, and the naked patch round the eye is of a round form in the female and somewhat pear-shaped in the male. When you have the opportunity of comparing an undoubted pair you will find the male is the more alert and active bird of the two, and that bis mate is altogether more effeminate in appearance. If a pair (male and female) could be seen together (that is, adult birds), even a tyro would have no difficulty in picking them out. The head of the male is much flatter and not so arched as that of the female, whose crown is very much more arched and rounded than that of the male. Another fairly reliable means of identifying the sexes is that most hen Parrots favour gentlemen and the males ladies; this preference is fairly constant and common with many species. You are the fortunate possessor of two healthy Greys.

What Bird?

(1) Can you name my pair of Finches from description herewith? (2) What is their value? (3) Will they breed and what is their treatment?—F.F.

F.F.—(1) The Bronze-wing Mannikin (*Spermestes cucullata*), a native of Western and Equatorial Africa. (2) It is a freely imported species, and its average value is 3/6 to 4/6 a pair. (3) They have bred with several aviarists, and are as ready as any of the Mannikins to breed, but they are not by any means free breeders, not even in large garden aviaries; very possibly this arises from their cheapness and frequency on the market, so that suitable quarters are not given them and they are "lost in a crowd." In a large cage, or better, a not overcrowded garden aviary, suitably furnished with nest boxes and twig branches, there should be a reasonable prospect of their breeding. They will thrive and continue in health on canary, white and spray millet, with grit, green food, cuttlefish, and water for drinking and bathing; but they will be the better for a little soft food consisting of ants' eggs, dried flies, and crushed Osborne biscuits in equal parts and made crumbly moist for use; also some kind of small insects, beetles, flies, smooth caterpillars, green fly, and other plant bugs from non-poisonous plants, those taken from rose and fruit trees and vegetable growths are quite safe to use. Thus treated their plumage will assume a richness and sleekness unknown to birds confined to a seed diet. The above diet and treatment would suffice for the breeding season.

Grey Parrot Mopy.

My bird, which is fed on "Parrot Mixture," tea sop, bread and butter, potato, and ripe fruit, has lately developed the habit of cackling, bringing up its food, ruffing up its feathers, gapes, and is mopy. What is the remedy?—R. BANKS.

R. Banks.—I do not think there is much the matter with your bird at present, but there soon will be unless you change the diet. I will repeat once more for your benefit—Do not give Parrot foods, tea, coffee, or milk slops, fats, or any kind of animal food whatever. Diet: Seed mixture—two parts each canary and oats, and one part each hemp, wheat, dari, small maize, and sunflower seeds, well mix and always keep a supply in the cage; also keeping up regular supplies of grit, cuttlefish and water. Supply as extras boiled potato, plain biscuit, crust household bread (all dry), raw carrot, ripe fruit, nuts, and green food. Get a bottle of Dinneford's Magnesia, and twice a week put one teaspoonful in its drinking water, and continue this till the sickness yields, but you must not permit its bowels to become watery loose. Colouring the drinking water on the days that come between with Parrish's Chemical Food would be a good tonic for the bird.

Parrot with Overgrown Beak.

Thanks for information received. The beak does not interfere with its taking its food, but the seed is broken with the side of the beak. It is strong, healthy, and a good talker. Would it be advisable to trim its beak?—MUDDLE.

Muddle.—Other than having the beak trimmed by a vet, or some experienced fancier in your locality, but the vet. would be the better man and no mishap likely to occur. If you prefer to let it go on a little as it is, then give it plenty of wood, cotton reels, etc., to chew up; also a lump of old mortar rubbish and cuttlefish for the same purpose, and possibly it will gradually wear off. It would be a pity to have any mishap with it through unskilled attention, as it appears to be acclimatised and in a healthy condition, also in a fair way to make a talented talker.

Cockateels as Cage Pets.

I bought one a few weeks ago; will it learn to talk? What is its food and treatment? At present it is shy and timid.—H.C.

H.C.—If you train a male Cockatecl from a young one, it will certainly make a confiding and engaging pet. As regards talking, this depends on the patience you expend upon it; the majority of these birds only scream and warble, the bulk of them do not even attempt to mimic other sounds. However, a male which has been in my garden aviary for nine years does at times make a sort of harsh imitation of the Blackbird's song, of which a number frequent the garden. I have seen one bird which could clearly speak a few words, such as "Yes," "No," "Joey," etc., and also heard of others, but they all had been trained from the nest. The only requisite is unlimited patience. They are rather shy and timid birds till they become accustomed to their owner. The male, when adult, has bright primrose-yellow cheeks and bright brick-red ear coverts. The cheeks of the female are grey suffused with yellow, and the ear coverts much duller in tone. Diet: Canary, millet, oats, green food, grit, cuttlefish, and water ad lib., both for drinking and bathing. A stale crust of household bread (dry) is appreciated by some individuals.

Barbary Doves.

I have a young one which can now feed itself. It does not coo yet; how can I tell its sex?—J.L.

J.L.—The outward differences in the sexes of Barbary Doves are infinitesimal, and even when adult I should not care to sex an odd bird. Where there are several kept together, the coo and also the display of the male should single these birds out. It takes a little practice, but in the old days when I kept these birds, I could always pick out the sexes by their effeminate or otherwise appearance. But where they have space, the males when adult will soon single themselves out by their display. An immature bird's sex can only be guessed at. I did not by any means find the shape of the head either a reliable or constant characteristic of either sex, and the sexing of most Doves which have the plumage alike is a most difficult task, as keepers of Foreign Doves know to their cost.

Red-faced Lovebird with Fits.

My bird, which I have had about a year, during which time it has been in good health; the other morning she fell off the perch in a fit, but after being splashed with cold water came round again. Please advise me what to do?—M. GUCEVEN.

M. Guceven.—Make the bird's drinking water quite saline with Epsom Salts for one day, and repeat same after an interval of two days. Supply green food, such as grass in flower, fresh tender lettuce, etc., also ripe fruit, such kinds as it will best happen to be in season. These birds, somewhat listless under almost all conditions in captivity, do not get enough exercise, and consequently get overfat, and a little excitement causes a fit. Your treatment is quite correct, but I should give an aperient as necessary to keep its bowels moving freely, but not watery loose. Keep a piece of cuttlefish in its cage, and induce it to take all the exercise you can. I had a similar occurence with Varied Lorrikeets, three fits in a fortnight. The birds are now in excellent condition again as the result of increased exercise.

Hand-rearing Budgerigars.

How often must I feed, and at what age must I begin to hand-rear Budgerigars? What food must I feed them with? How long must I continue to hand-feed?—FOREIGNER.

Foreigner.—I never but once attempted to hand-feed these birds, and I shall never repeat the attempt, as I don't consider the game worth the bother. From early morning till dusk (daylight till dusk would more fit the case) they must be fed at least every hour, and I should not commence with them till they were a fortnight old, and you must continue to feed them till they can break seed for themselves. The one brood I reared I fed on soaked seed (canary and millet), Quaker Oats (soaked), and stale household bread; the bread was soaked, squeezed dry, and left to stand till all superfluous moisture had evaporated. All seeds after soaking were dried in a towel before being given to the youngsters. The seeds were also cracked with a smoothing iron and the husks blown away before being soaked. It was many years ago since I indulged myself thus, and though the youngsters were very tame and became fully adult, I shall never undertake the bother again. I certainly hope "Foreigner" will succeed, but I fear he or she will tire of the task before it is over. These birds rear their young without fuss and bother, and if you play with and handle (gently) the young a little as soon as they leave the nest, you will find them become very tame, and, if they are in an aviary, fly all over you when you enter.

Wintering Avadavats, etc., out of Doors.

Can I safely winter out of doors Cordon Bleus, Avadavats, Waxbills, Lavender and Fire Finches? The aviary is S.W., and sheltered from winds.—NEMO.

Nemo.—If the birds you name have been out all the summer, and there is a sound well-lighted shelter shed attached to your aviary into which they could be shut during very extreme weather, they would undoubtedly safely go through the winter out of doors. I am speaking of the Lavender and Fire Finches and Cordon Bleus; of the others there is no doubt. In an exposed garden aviary I have had Zebra, Orange-cheek, and Grey Waxbills, Avadavats, etc., live from four to eight years out of doors all the year round. Note: My birds had ample room for flight and exercise. If you send me size of your aviary and its arrangements, I could give you a more definite reply.

Black-headed Mannikin.

Will the Black-headed Mannikin agree with Java Sparrows, etc., in small indoor aviary? Can I breed any Foreign Hybrids? Do any of them sing? When I keep them altogether, will they take harm from one another's food?—BEGINNER.

Beginner.—Yes, the Black-headed Mannikin will agree with the birds you name, and possibly some would pair up and produce Hybrids, but not in a cage full of mixed birds, or even an indoor aviary if it is at all crowded. It must be fitted up with nest boxes and husks, which should be screened with twiggy branches. None of the birds you name count for much as songsters, the major portion of them have practically no song, though, of course, they are not dumb. The Alario, Grey and Green Singing Finches, also Yellow-rumped and Grey-necked Serins are all good songsters. The birds named will take no harm from eating one another's food. You would find a leaf of tender lettuce picked over by many Foreigners that will take no other kind of green food. Give a few ants' eggs and a little sponge cake as well as the seed diet. A few green or black fly (blight) from rose or fruit trees is greedily eaten by most Finches and Waxbills, and is very wholesome for them. The same as to a little ripe fruit, apple, pear, banana, etc. However, to be able to give a fully satisfactory reply, you must send size of aviary, etc.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Waxbill (B.G.W.).—Awaiting fee.

Grey Parrot (H.B.).—Inflammation of liver, with rupture of large blood vessel of that organ.

Canary Chick (B.G.W.).—This youngster died from inattention; not an atom of food contained in its crop or stomach.

Nestling Canary (F.H.).—Death caused by neglect of parents, who are possibly under influence of "nesting fever." As you had assisted with the feeding, it is quite likely you might have reared this nest of birds had you taken entire charge of them and covered them with flannel.

GENERAL.

Answered by the EDITOR.

Show Reports (C. Nash).—The numbers containing the show reports you require are in print. We will send you same on receipt of four penny stamps.

A Prosecution (E.W.B.).—We could not give the verdict, for, as a matter of fact, that has yet to be pronounced. The case was sent to the Assizes, which have not yet been held. We hope to report the matter in due course.

"Grate Fite" at Newcastle (S. McTavish).—We have had to delete one sentence from your letter. If you will give full particulars, with date, concerning the accusation therein, we will certainly publish same, but we cannot do it unless fully substantiated.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

This week Uncle Peter's nephews and nieces will read a story of a clever Blackbird, which tale Uncle Peter thinks is very unlikely to be true. However, it is possible, and the children can all look out for anything similar being done by any of the wild birds that frequent their gardens. The story is so old that it was told by Æsop about a crow, so, after all, it may have some foundation in fact.

Other children have sent descriptions of birds, which are unfortunately inaccurate and misleading, and therefore, although they are beautifully written out, Uncle Peter thinks it wiser not to print them; but he hopes these young friends will try again for a prize. F. E. Higgins writes about the Hedge Sparrow, and though much that he says is true, he has not grasped the fact that the Hedge Sparrow is a soft-billed, insect-eating bird, and is no relation to the House Sparrow and Tree Sparrow, except in so far as all three are birds of the Passerine order. It is quite untrue to say that these birds will not bear captivity; they all do very well indeed when caged if only they are properly catered for. But few people think them worth the trouble of keeping.

Thomas Kemp, who is only eleven years old, sends an excellent sketch of a Canary. If he goes on drawing equally well, Mr. Norman will have to look to his laurels before many years are past.

George Hodge sends an account of the death of his Skylark. It is rather too sad to print, and would not help anyone, as the cause of death was not discovered. But George's handwriting is so clear and beautiful that Uncle Peter thinks he deserves a prize for that alone.

W. Whittaker sends a poem about his pet Dove. It is very good for so young an author, but the rhymes are primitive, and the piece is too long for the corner. Uncle Peter is very sorry to hear that the writer is blind.

* My Christmas Present.

Last Christmas I had a Norwich Canary given me. It is not quite a year old yet, and all through the cold weather it has been singing. My uncle, who gave it to me, has a crested one, which a short time ago broke its leg, and he read in CAGE BIRDS how to set it, and it is now quite well and singing again; he has three more Canaries besides this one.—HENRY W. FRANKS (age 11), 318, Harrow Road, Paddington, W.

* The Greenfinch.

The adult male Greenfinch is rather a handsome bird. His name denotes his colour. He has a strong beak, more pointed than that of the Bullfinch, but about as thick; and the side of his wing is decorated with a patch of bright yellow. The female is much greyer, has less yellow on the wing, and is a shade smaller than her mate. The young have speckled breasts, and are often mistaken for Mules; but in a few weeks they moult, when their parentage is unmistakable.—A. COTTON (age 14), 16, Thackeray Road, Portswood, Southampton.

* Winter Hospitality.

My father takes in CAGE BIRDS, and I always read the letters from boys and girls, so thought you would like to know what I did last winter when the snow came. Every morning I swept a place to feed the birds. Father gave me seed for the seed-eaters, and for the soft-bills I soaked bread, mixed with scraps from the table. Every morning there were waiting Thrushes, Starlings, Chaffinches, Robins, Rooks, Larks, and a lot of Sparrows.—SYDNEY WILLIAMSON (age 13), 71, Royle Street, Northwich.

The Thoughtful Blackbird.

At a farm not many miles from here there lived a farmer and his wife. Outside the house there was an old pot full of rainwater, which was frequently used by an old and thoughtful Blackbird as a drinking-fountain. At this particular time there had been no rain for a few weeks, and the water in the pot was exceedingly low. By the side of the pot was a heap of pebbles. At the usual time the Blackbird came and was greatly disappointed to find the water out of his reach, it being so low. But he at once set to work and dropped the pebbles in the pot one by one, until the water had risen high enough for him to quench his thirst.—Sent by WILFRED SHEPPARD (aged 13), "Sunny Side," Shepwell Green, Willenhall, Staffs.

Stroking the Mother.

During a walk through the country last summer I came across a Blackbird's nest, and desired to see its contents. The sitting bird allowed me to stroke it several times, but would not be induced from the nest. I was told that the nest contained three youngsters and an egg.—W. J. CLARK (age 13), 7, Shaftesbury Terrace, St. George, Bristol.

A Blackbird has built its nest in one of the chandeliers in the North Berwick Parish Church Hall, and flies in and out by a window. It is evidently the bird that built its nest in the same spot last season, and sat undisturbed while the Sunday School children were in the hall.

IN THE COURTS.

READING BIRD CATCHER FINED.

Police Complained of.

John Iles, of Amity Road, Reading, at the Wokingham Petty Sessions, on June 11th, was summoned at the instance of the R.S.P.C.A. for using bird lime to take wild birds—viz., Chaffinches—at Earley on May 17th.—Mr. W. J. Brain was for the prosecution, and the defendant, who denied the offence, was represented by Mr. L. S. Green, barrister (instructed by Mr. C. G. Shaw). Mr. H. U. H. Thorne (County Solicitor) beld a watching brief on behalf of the Berks County Police. Mr. Brain applied for permission to amend the summons by adding the fact that he was convicted and fined at Wokingham under the same statute—the Wild Birds' Protection Act—on December 15th, 1903.

Henry Hayward, of Earley, spoke to seeing the defendant at 11.30 a.m. near Wilderness Road, Earley, with another man. They were standing alongside the ditch in the road. They had a bird cage in which was a decoy Chaffinch, and also a bird twig with bird lime on, and a dummy Chaffinch. Witness saw several Chaffinches go on to the twig, and Iles ran to them, took them off, and put them in another cage. Witness watched the defendant for about an hour.—William Warner, a telegraph boy, corroborated.

P.C. Fisher spoke to seeing the prisoner with the cages. Witness told him he suspected him of being in possession of wild birds recently caught, and he said, "I haven't got any; you can search me if you like." The defendant opened a basket which he had with him, and in it witness saw a small cage in which was a Chaffinch. Witness searched him, but found nothing.—Cross-examined: He admitted that he said to the defendant: "Well, Iles, it's one to you this morning."—P.C. Wells bore out P.C. Fisher's evidence.

P.C. Hopkins spoke to seeing the defendant walking in the direction of Twyford about 3 p.m. on the same day with two cages. In a basket he was carrying witness found 18 Chaffinches. The defendant told him he had brought them from an aviary at home, and that they had been in his possession three months. The birds were very wild, and had bird lime all over them. Witness took possession of the birds, which the defendant carried to Twyford, and witness handed them to P.S. East. On the way the defendant said he wanted to go into the "Bull" Inn, at Twyford, but witness said he could not go and take the birds with him.—Cross-examined: He denied saying to Iles, "You will have to come along with me." He also denied taking hold of the defendant's collar and pulling him back when he was about to enter the "Bull" Inn, nor did he say to him, "You are in my charge."—Mr. Green: Did you know a complaint was made against you by Mr. Shaw?—No.

P.S. East proved receiving the birds from Hopkins. They were covered with fresh bird lime, and two of the birds were bleeding, their tails having been pulled off, evidently by their sticking to the bird lime. He was certain they had not been kept in captivity for even one night.

Addressing the Bench for the defendant, Mr. Green suggested that there was no love lost between the police and the defendant in consequence of what had already occurred, and that, therefore, it was only human that the police should have their knife into him.

The defendant, on oath, stated that he left home at 11.15 a.m. on the day in question. He took out the Chaffinch to improve its song. He took no decoy bird, dummy bird, stick or bird lime with him. He did not, either alone or in company with anyone else, attempt to catch any birds, and he told the constable this. Witness went home to dinner, and afterwards took 18 Chaffinches to Twyford for sale. P.C. Hopkins met him, and told him he would have to go with him. He accompanied the officer to Twyford, and on arrival there Hopkins prevented him from going into the "Bull" Inn, on the ground that he was in custody. His birds were taken from him. The birds were not wild, as he had had them in captivity for some months. The marks of bird lime on the birds had been on since he caught them about February.

Albert Harding, of Twyford, deposed to making an appointment with the defendant, in consequence of which the latter brought a number of birds to him on May 17th.—Elizabeth Iles, mother of the defendant, bore out her son's statement as to his movements.—Albert Camblett, hawker, of Reading, said he was not in company with Iles on May 17th, as had been alleged.

The Bench imposed a fine of £2 and £1 1s. 6d. costs, and granted an order for the forfeiture of the birds and cages. The previous conviction was formally proved.

AT KINGSTON-ON-THAMES.

Fourteen Chaffinches, found in the possession of two Bethnal Green birdcatchers, by an alert constable, were liberated, and the two men were summoned at Kingston-on-Thames for having committed an offence under the Wild Birds' Protection Act. The decoy birds used by them were produced in court. The defendants were fined 8s. 6d. each, and their apparatus and decoy birds confiscated. The poor decoys immediately commenced singing, as though in thanksgiving, and at the close of the proceedings they were liberated by the police.—"Evening News."

BREEDERS SHOULD USE "THE STOCK BOOK."

COAL TAR FOR ASTHMA.

SIR,—Would any of your readers inform me through your columns where to get coal tar for cage birds or Canaries? I wish every success to your valuable paper CAGE BIRDS.

D. AIRLIE.

[Where the original recommender of coal tar as a remedy for wheezing obtained his supply we cannot say, but Miss Bushnell, who wrote on the subject a fortnight ago, stated she obtained it at a chemist's shop, which, we should think, would be the place to apply.—EDITOR.]

COCKATOOS LOSING THEIR FEATHERS.

SIR,—I often see readers worried by their Cockatoos and Parrots losing their feathers, and wondered whether these two letters, which appeared in a morning paper, might interest them. A Mrs. Mason (of Grays) wrote:—"Would you be kind enough to insert an inquiry as to why a young Cockatoo's new feathers should fall off and leave him in a most distressed condition?" This was replied to by a Mr. Lockhart (Stoke Newington), who said:—"There does not appear to be any known reason why the new feathers of the young Cockatoo should fall off. Having kept some of the birds in question, I had the same experience with two of them, and we prevented a third bird from a similar complaint by adopting this simple remedy: Put pure sweet olive oil in his water, which he will refrain from drinking for a day or two, but ultimately will relish the oil, making the cure complete." S. WELLS.

DEFORMED FRONT TOES IN YOUNG BIRDS.

SIR,—Now that young broods should be on the perches in good numbers fanciers should keep a sharp look-out for cases of slipped claws, in order to treat them early. It often happens that a bird hurts a claw soon after leaving the nest, and before it has gained strength and confidence enough to travel about the perches with much freedom, and unless such injuries are attended to early, they soon become extremely obstinate and difficult to remedy. It should also be remembered that badly shaped perches or loose, wobbly perches, are frequently the cause of these accidents happening to young birds—even more so than to old ones. The usual rubber band remedy is well-known when it is a hind toe that is affected, but if it is one of the fore toes, the best treatment is to tie it carefully and securely near the claw to the strongest of its fellow toes—that is, supposing it to be a middle toe that is affected; if it is either of the side toes it must, of course, be bound to the middle one. Use very fine wool, that which is about as thick as common thread, and do not tie too tightly. I have tried this tip with much success, and I venture to send it hoping it will be helpful to others.

W. STEVENS.

PARASITES ON CANARIES, &c.

SIR,—I was very much interested in the methods of dealing with parasites brought forward by Mr. R. Allen in CAGE BIRDS a few issues ago. I have been wondering whether he got any birds to try his methods on, and what was the result. I am sure more readers than myself would be glad to know. In the meantime, I may say I saw an interesting cutting in a local paper on this subject, which I enclose:—Although improper feeding and bad management generally have much to do with the development among cage birds of the feather-plucking habit, the presence of red mite is the most fruitful source of all. These minute creatures too often simply swarm in the bird cages, lying hidden in nicks and crannies during the day-time, from whence they march out at night to "devour" the unfortunate bird. So great is this evil, and, alas, so common, that much has been written on the subject, while many interesting experiments have been made with these pests in order to ascertain how best they may be combated. Now, without going further into that branch of the subject, and indeed having merely mentioned it to show that those who understand birds are not likely to under-estimate the gravity of this evil, we will try to deal with it from the amateur's point of view. A bird is showing signs of being in trouble, and it is thought that vermin may be the cause. Examination of the bird itself would probably prove this, while an easier way is to wrap a white handkerchief round the cage at night, and then examine it the following morning, for if red mite are present some will be found sticking to the handkerchief. Now, the first thing to be done is to move the bird into a separate cage, as it is almost more important to get the cage clean than the bird. If the latter is good at taking baths, then the work is more simple, as a good teaspoonful of a solution of quassia chips may be added to his bath for a few mornings. Failing this, the bird may be sprayed, or if there is any reason for not using moisture, then insect powder may be blown amongst the feathers; but, of course, the work must be done very thoroughly, and repeated more than twice, as it is impossible to rid a bird of such minute pests at the first or even second attempt. While this treatment is going on, thoroughly clean the cage.

A. HADDOW.

DANDELION SEED.

How to Gather.

SIR,—Having seen an enquiry in CAGE BIRDS, asking how to get the seed from dandelion heads, I am venturing to send my method of getting same. When I collect the heads I only get those which are ready to blow or open. These I cut with a pair of scissors just above the seed, and then spread them out to dry when they will open and the seed can be taken from them and stored for future use. This method does away with the clocks or down blowing about the room when you are giving the birds a treat. TARAXACUM.

NORWICH PLAINHEAD CLUB FOR WALES.

SIR,—Allow me to thank those who have written offering their support to above club. I shall be glad to hear what our friends in North Wales have to say on the matter as early as possible, and I shall be pleased if those that would join if the above club is formed will send me a postcard, so that, if possible, I may be able to call a meeting for this purpose on July 24th, this being the date for our next First Feather Show. They would be able to visit the show and have the meeting after. Now, Norwich fanciers, let me hear from you by return of post. J. W. DUMMETT.

17, Penarth Road, Cardiff.

THE SCOTCH FANCY MODEL.

SIR,—Mr. Harrison is mightily anxious to have Mr. Wright's model removed, and "Piebald" inclines that way; but Scotchmen know when they have a suitable model, and mean to stick to it. Mr. Wright's is the best that has been before fanciers; however, arrangements might be made to have them reproduced, and thereafter take a vote of all fanciers who care to express their opinion. I say we should go for the smooth-feathered Scotch Fancy, and that is a strong point with the favourite model. The judges should be bound over to go by a fixed standard, and we would have better results from the judges; competition would become satisfactory. The committee worked hard for the model, and in the end got nothing but abuse. Mr. Harrison and "Piebald" might take the matter up and seize the present opportunity to immortalise their illustrious names. In remitting the question to them, it should be on the understanding that they are both interested in the Scotch Fancy, owners of at least 20 Scotch Fancy Canaries, and that they personally reside in Scotland. We want solid Scotch fanciers to take the business up and carry it through to a successful termination. I would suggest that two tellers should be appointed, to whom the votes should be sent. Can any of your readers say where Mr. Harrison is now located? I have not seen him for months. ANVOCATE FOR MODEL.

SIR,—In reply to Mr. Harrison on the above subject, he does not give those interested in the subject much hope of any explanation from the members of committee, who are responsible on this model question "muddle." I for one—and I am not the only one—still look to that committee to explain. Why not? They are gentlemen of tried experience of the subject, were entrusted by those who elected them as worthy of their confidence, and why should they not come forward and give their reasons, one way or the other, on the present condition of this all-important question? You say, Mr. Harrison, that you have asked and are practically still waiting an answer to a question relative to a letter that was sent objecting to Mr. Wright's model. Your letter was directed for Secretary Smith's attention. Surely that gentleman would give it the attention wanted and acknowledgment that such a letter demanded. If not—and you are still waiting—all I can say on that point is, I am surprised. You ask me to turn up the report of committee meeting on the model question in CAGE BIRDS of last year. Well, I have done so; but shall reserve my remarks on that meeting for further consideration. In conclusion, I trust those who elected this committee will see it a duty to take the earliest opportunity afforded them of getting a full report of the meetings held on the model question, and in each case what was the nature of the decisions come to at such meetings. How many models were submitted, and the names of the gentlemen who submitted same, also the names of clubs or associations to whom models were submitted for their members' expression of opinion and vote upon? There should be no difficulty in getting this information. It is a reasonable request, as matters stand. With the Editor's indulgence, I hope Mr. Harrison, to have more to say on the subject; but I trust some member of committee will yet come forward and give us their views on the subject, and clear the air a bit, and show they were each and all worthy of the trust imposed on them, by their own consent, in the selection of a "standard model" of the Scotch Fancy Canary. PIEBALD.

'WARE HORSE HAIR.

SIR,—Having rather a peculiar occurrence in my bird room one morning this week, I thought perhaps it would prove interesting, and a warning to fanciers as regards nesting material. When going into my room as usual in the morning, early, I heard such a noise in one of my breeding cages, with three young ones in, and on looking was surprised to see one hung up by the beak to the nest. I tried to pull it down, but could not; so had to take nest box out and cut him down. The article it was hung with was a horse hair, which had got mixed in the nesting material in some way. This was entangled round the back of its tongue, and the tongue, by the weight and fluttering of the bird—which had only left the nest that morning—was pulled out its full length and was very swollen and red. It was without food in its crop, and if it had not been found would have soon died; but now, I am pleased to say, is quite well again and on perch. I should also just like to note the hair took me ten minutes to undo and cut away from the tongue with sharp scissors, being so entangled and bird so exhausted.

J. J. BRAIN.

BIRD LIFE IN THE WILD WEST.

SIR,—I am just taking the liberty of sending you a few of my observations re wild bird life out here in the far west Nanaimo, Vancouver Island, Canada. I arrived here on the 2nd of November last year, and I can assure you I have been very much interested in the wild birds around here. In the first place, I may say there are a few British Sparrows in this city, so in the course of a few years there will be plenty of them; but what surprised me was that a good few Sparrows were found dead after the snow cleared away. It has been an exceptionally hard winter here—the hardest for a great number of years. There is also a large quantity of crows, but they look a lot less than the Old Country crows; and as for Sea Gulls, Wild Ducks and Geese, this place literally abounds with them. They follow the large shoals of herrings that come in the Bay from October until March, then they leave for their breeding grounds. In the spring there are thousands upon thousands of Gulls, and it is a lovely sight to watch them feeding. There are three different kinds of them—the Herring Gull, the Grey Gull, and a smaller kind I am not acquainted with. There are also a few different kinds of Diver birds, of various sizes. I have also seen just one Heron since I came here. This bird, which was caught while asleep by a boy, was on exhibition at the late Nanaimo Poultry, Pigeon and Pet Stock Show, and was a great attraction to many of the visitors. The following birds attracted my attention on my arrival:—The Blue Jay; this bird is identical with the British Jay in every respect except colour. There is also another bird; they call it the Robin here, but it is of the Thrush family, and is about same size, and mostly resembles the Redwing in markings and colour, only its colours are much brighter, and displays red in all its colours throughout. Another beautiful bird they call the Cat Bird; this bird is about the size of a Siberian Bullfinch. It has a black head, blue back and wings, tail black mixed with white, and has a deep chestnut breast; it is of the Bunting family. There is also another bird of the Bunting tribe, about the size of a Yellowhammer. Its colours are grey with a rich yellow stripe, which runs over its head. Another which appears to be very common here is a grey coloured bird, a little larger than an Hedge Sparrow, which it greatly resembles in all its habits. A bird very common here is about the size of the Titlark; it has a black head and throat, body colour all brown, grey wings and tail, mixed with white. There are also some beautiful little birds of the Tit family; they are a little smaller than the British Tits, but their colours and habits are identical. There is also a beautiful Woodpecker; it is about the size of a British Missel Thrush. This bird is also quite common; it has rich brown, or nearly red, body colour; its quills of both wings and tail feathers are blood red; it also has a large patch of red on each side of throat and back side of head, and is spotted all over with round black spots, same as a Thrush on breast. Very nice is the Kingfisher, which is about the same size as the above bird; its colours are blue, chocolate and white. Like all the Kingfisher tribe, it has a very large bill, and is an adept at catching small fish. I have watched them feeding many times; it is very seldom it misses its prey when once it makes a dive. There are also a few different kinds of Hawks and Eagles. One resembles the British Kestrel in all its habits. Another about the size and colour of the British Sparrow Hawk, but has a shorter tail; this bird seems to live entirely on other birds. A large black-coloured Eagle, which is very wild and flies high, I cannot give much description of, as it keeps well to the thick bush. Another large Eagle is always seen near the Bay, where the Gulls abound, and as it has disappeared since the Gulls left for their breeding quarters, I am inclined to think it must be a Sea Eagle. All the above are what I would call resident birds, as they were here all through the winter. I almost forgot to mention a bird which is about the size of a British Starling; its colours are grey wings and tail, mixed with white, black throat and head; it is called the Meadow Lark, but its habits are more like those of the Starling. This bird makes an attempt to sing, but it has only two notes, which it repeats over and over again. There is also a Siskin; they call it the Pine Siskin. This bird is very numerous; it is a little grey-coloured bird, somewhat smaller than the British Siskin. It breeds freely with Canaries, and the Mules make free songsters. My friend Mr. J. Harris, of this city, bred some last year, and they are grand songsters. With respect to the summer migrants, I may say I have been out in the bush this last three Sunday mornings at 5 a.m., as there is nothing like being early if you want to study and observe bird life in its natural state. I saw the first two Swallows on March 31st. There are quite a number of them here, and I see they have started to breed. There is only one kind here; they are intermediate in size, between the House Martin and the Sand Martins. Another beautiful bird is identical with the British Blackbird in every respect except colour. It has a yellow bill, black head and throat, blue back, black wings and tail, and red breast. This bird tries to sing, but only makes a feeble attempt. There is also a very little green bird, smaller than the British Willow Wren; also several different kinds of grey-coloured birds of the Nightingale tribe, but I haven't heard any of them try to sing. I also saw a pair of Mosquito Hawks. They are smaller than the male Sparrow Hawk, and by what I saw of them they had red tails and backs, and light grey breasts. Their habits are similar to the Kestrel. They dally in the air over their prey, but I think will live entirely on insect life. Another pretty little bird that has just arrived here is the Humming Bird. It is a lovely sight to see them feeding on the gooseberry blossom, displaying all their gorgeous colours as they change their position in flitting from flower to flower, in bee-like fashion. Birds of the Finch family that I have seen are few. The Pine Siskin I mentioned before. Another beautiful Siskin they call the Californian or North American Black-headed Siskin. This bird has black head, wings and tail, with yellow legs and beak; all body feathers are a rich yellow, just like a colour-fed Norwich. This bird breeds freely with the Canary. My friend Mr. Harris has one breeding with Canary hen now; they breed nice Males, and they are very free songsters. The Canadian Hawfinch is also a noble bird, larger than his British brother and more beautiful in colours. He has a very large thick beak, black head, with a rich yellow forehead from beak to behind the eyes, black throat, all body feathers a dark bronze green, long flight feathers black, inner wing feathers white, which gives it the appearance of having a white back, and black tail. On April 24th, when going to work, Mr. Harris and myself heard the familiar call of the Goldfinch in some fruit trees. We were both surprised, but we looked and saw a pair of Goldfinches, and we got quite close enough to them to satisfy ourselves they were Goldies; but as we have not seen them since we are thinking they must have left.

MR. PADDOCK'S MODEL NORWICH.

SIR,—Allow me to congratulate Mr. Paddock on his excellent model you published last week in CAGE BIRDS, and which he has submitted to the Norwich Plainhead Club. It is, to my mind, the best Norwich I ever saw published, and sets breeders a very high ideal for which to breed to. Don't you think, Mr. P., the legs would be better did they show a little more substance? Were this done, then we would have a perfect model.

WILLIAM AITCHISON.

WATFORD C.B.S. AND RULE 17.

SIR,—In reply to "The Member who Resigned," the paragraph he refers to is correct, he being the ouly dissenter on the question of Rule 17 at the meeting. He took the views expressed by the members very badly (from what he said to me after the meeting), but I had no idea that he would take such a narrow-minded course as resigning. Why he should do so I know not, as he says the meeting never came to a decision; therefore he confirms the paragraph he refers to. I must also contradict him when he says that Mr. Lythgoe gave me permission to show, and if he had read my letter last week (which he evidently did) he would have seen for himself that it was not the case. The other members he refers to were not allowed to show; they made their entries under the same impression as I did, that the license had been applied for. If (as he says) he is in a position to state that the West Herts F.A. did not apply for the license, perhaps he is also in a position to say why it did not? He will see for himself that I endeavoured to get it righted for them. Why was not the opportunity taken? Now I must correct him again: I did not, nor do I ever, arrange the committee meetings. As a matter of fact, I knew nothing of such until I received a postcard on the morning of the same, which bears the Watford postmark, June 2nd, and timed 2 a.m. (evidently posted some time Sunday). There was no intimation as to what the business consisted of, but it simply said that a special committee meeting would be held on Monday at 8 p.m. I just managed to catch the 7.40 out of Euston by the skin of my teeth, arriving at Bushey at 8.25, where I got out and walked up the town to save time. The meeting was in full swing when I arrived, and his resignation was under discussion, with the result already stated. It was purely a financial meeting, and at the finish the proposed deletion in Rule 17 was brought up, and it was asked if the committee was in order in dealing with it. According to the rules they were, as it reads: "But the committee shall be empowered to deal with all emergency business, subject to the approval of the next meeting." This, I contended, was emergency business, as the voting closed on the following Saturday; and, as the general meeting was so favourably inclined to accept the rule as it stands, the committee were quite within their rights in dealing with it. But it is still open for any member to object to their decision at the next meeting. Not for one minute do I suppose anyone will be so narrow-minded as to resign because no one backs up his objection, however.

R. J. PRETTY.

THE CRESTED CANARY CLUB AND THE C.B.U.

SIR,—It is a prevarication of the truth on the part of "A Country Member" when he says that I have gone out of the way to influence my fellow-members with all the strength of words at my command to vote against affiliating to the C.B.U. This, to say the least about it, is a typical hysterical statement (a word so fondly used by "A Country Member"). Had it been my desire to influence my fellow-members, I should have used much stronger language than I have done in my letters on the subject, and should have gone to work in quite a different manner than writing through the Press. As it is, I have had no conversation with anyone beyond what took place at the Palace meeting and on my way home in the train with a Liverpool member. Thirteen letters I wrote to members of the C.C.C., those known to me, asking if they agreed with me on calling a meeting to rescind the resolution passed at the Palace to write to Mr. Tyson to that effect. Two letters I wrote to Mr. Tyson, one stating what I had done, the other that I would attend the meeting; never a word with him (beyond what was said at the Palace in the company of several others) on the C.B.U., or the affiliation of the C.C.C. with that body. Am I to understand that, if I venture an opinion, that "A Country Member" calls it influence? If I refuse to support that in which I have no confidence, he calls it coercion. Fie on "A Country Member" for such narrow-minded ideas! He says Rule 17 is the remedy. No coercion about that, on "A Country Member's" part, eh? I have given my opinion, based on a fair knowledge of the cage bird Fancy during the past 30 years, and from practical experience connected with it. What will be the result if the C.C.C. becomes affiliated with the C.B.U. forthwith? I contend that I have a right to give expression to my opinion if I feel so disposed. "A Country Member" has an equal right to give expression to contrary opinons. Why not call this influence towards affiliation? There is this much to be said, that "A Country Member," in his views, and with his arguments, protects himself under a nom-de-plume. In the event of affiliation taking place, and afterwards a collapse of the C.B.U., the members of the C.C.C. (or what is left of them) will have to beat the air and ask, probably in vain, who is "A Country Member," and who led us astray? However, I do sincerely hope my views may be wrong; but it's best to be on the safe side. What I should have considered the best and most business-like manner would have been for the C.C.C. to have waited until the C.B.U. was more firmly established and gained the entire confidence of the Fancy. If it could only have dealt with railway rates, protection and careful handling of birds during transit, it would justify its existence. But all one hears is fraud, fraud, fraud; one would think the cage bird Fancy was a cesspool of iniquity, to hear the constant clamouring after dishonest persons. That it and they do exist no one will deny. That every available means should be taken to prevent it, no honest person would scruple to employ; but it is my firm belief that there is less fraud in the cage bird Fancy at the present time—taking into consideration the multiplicity of shows, the increase in the number of exhibitors and breeders in the country—than existed when there were fewer of each. This, in my opinion, is due to the publicity of all matters given by the Press. A dishonest man fears the Press more than he does a fine or probably the prison. Throughout I have surmised that there was an ulterior motive in advocating this radical alteration. I did not unconsciously hit the nail on the head when I said: "One would imagine the C.C.C. was a London club." I made use of the expression for a purpose. I have heard repeatedly, in different parts of the country, that nothing is right outside London (at any rate in the opinion of those residing inside the Metropolis). This, coupled with the statement made by "A Country Member," that I hit the nail straight on the head, strengthens my views that jealousy is rampant, and is the crux of the whole matter—and, further, is the rock ahead that I fear for the C.B.U. For the last time, I wish to repeat all that I have written is without prejudice; that I have no hostile feeling towards the C.B.U. whatever; that I am not connected with, or had any communication with, anyone who have so expressed themselves; that I have never yet expressed an opinion on Rule 17, for the simple reason that I am not concerned about it. All I have taken an interest in is the C.C.C., and I am still of the opinion that I have expressed, notwithstanding the veneering "A Country Member" has used in his arguments. No member of the C.C.C. need be influenced by my opinion; let him form his own, and act accordingly. Let us all enjoy freedom of action. Such is the desire of

W. E. GREEVES.

SIR,—"A Country Member's" laborious efforts are so far futile in convincing me of the advantages of the C.C.C. joining the C.B.U. as at present constituted. But I am quite open to conviction and would invite him to a meeting at any suitable place he cares to name in London within a mile of Trafalgar Square, so that the matter might be discussed and his endeavours given a better opportunity of bearing good fruit. I would gladly invite all C.C.C. members residing within the London police area, so that he might secure a good haul of converts.

JOHN TYSON.

ARE MULES UNFERTILE?

SIR,—Your interesting correspondent, Claude St. John, in his stray notes about birds, says in last week's CAGE BIRDS, in reference to the fertility of Mules: "So far as our cage birds are concerned, it may be generally accepted as a fact that Mules will not breed. There is no tittle of proof to the contrary." I feel, sir, that I should be doing your correspondent as well as myself an injustice if I allowed such a statement to pass unchallenged. There are many things which birdie men acknowledge today as facts which our forefathers pooh-poohed as impossibilities, and, as your correspondent very wisely says in the same article from which I have taken an extract, "A fine field of new ground for experimentation undoubtedly exists in this branch of aviculture to one who tackles it systematically." Quite so—there is no doubt about the truth of that statement. Here, then, is a fact which came under my own observation, and one which greatly interested me. A lady friend of mine had an aviary of British birds, and flying with them was a hen Mule of the Goldfinch-Canary cross. Noticing that a cock Linnet in the aviary was making a great fuss with the Mule hen, she removed them both into a breeding cage, gave them a nest box and material for nesting. The hen Mule commenced to build at once, and laid four eggs, one of which was fertile and hatched. I frequently saw these birds, and, as a matter of course, I did not expect anything to come of it, as I had become accustomed to reading so often that "all Mules were unfertile." However, this completely knocked all my scepticism on the question to the winds, and I was bound to accept things as I saw them. When the bird was two days old I offered my friend half-a-crown for it, I taking the chance whether it lived or not. This offer was not accepted, but the bird lived three weeks and then died. The strange thing about it is that this is the only bird my friend ever bred. Query: Was the bringing in of the third cross anything to do with the result—viz., the Linnet being crossed with the Goldfinch-Canary? I am quite satisfied there is yet very much to learn in connection with this most interesting question. Unless I am mistaken, I remember reading an account in CAGE BIRDS some time ago of someone else who had obtained fertile eggs from a Mule. Other readers' experiences upon this question will, I presume, be acceptable. At least, they will be to

J. C. WILMOT.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

BRAMBLEFINCH-CHAFFINCH HYBRIDS.

SIR,—Being a reader of CAGE BIRDS, and also "Bird World" since its first issue, and having gained much benefit from the same, I wish to state that I have been successful in breeding Hybrids, Bramblefinch-Chaffinch. Have you or any of your readers known this to be done before?

SAMUEL FADDES.

THE LARDER OF INSECTIVOROUS BIRDS.

SIR,—It is true that the bird-keeper of to-day is catered for extremely well in comparison with days gone by, and he can now offer his Soft-billed birds a fair variety of foods. But still there must be ample scope for further improvements, if it appeared to be worth the attention of some energetic and business-like importer. There is the migratory locust, which seems to offer exceptional opportunities for easy collection in large quantities, and which is greedily devoured not only by birds, but also by insect-eating animals, and even the human race. This should form an excellent adjunct to the bird-keeper's larder. The "locust-meal" which is sometimes obtainable we have been told is something entirely different, and does not consist of locusts at all. Then there is the honey-ant of Mexico, which is said to be eaten by the natives, so that it must be obtainable in large quantities, and it is of a large size. This should make another capital addition. Most species of grasshopper would also form very excellent food for birds, and the fact that some of the lower races of mankind are said to utilise them for food in time of scarcity seems to indicate that they also may be collected in good quantities. To the Antipodes is doubtless too far a cry, though the aborigines of Australia are said to feed upon a large butterfly, whilst the negroes in the West Indies are believed to eat freely of a large grub, or caterpillar, found in the palm trees. All this seems to show how large a region is still left to be exploited by the purveyor of insectivorous birds' food. If someone could only get and give us more information on points such as these, how deep a debt of gratitude we might come to owe him!

AVIC.

BIRD LIFE ON THE BORDERS.

SIR,—Owing to the wretched weather we have been experiencing in the north, in the form of rain and cold nights, the life of our summer visitors has been anything but pleasant; still the number of birds at present here is up to the standard, being well represented in variety. On May 27th, while crossing the old fateful Twizel Bridge, I observed that gem of our north country visitors, the Redstart, in full go, flitting along the walls and tapping the trees in front of me, but could not see his mate, although I watched him for 15 minutes, and had to leave him in his glory for want of time. Further on the way, after the sun really shone out, I espied the Spotted Flycatcher in pursuit of his morning feed, going through his usual acrobatic feats on the wing and returning to his usual resting or starting point. There are plenty of these birds here, although I have never seen the Pied specimen. I also came across a few Treecreepers, busy running here and there. The Corncrake is also now to be heard everywhere at night. Whitethroats, small and great, are well represented, their cheery song always being welcome. Bullfinches are very plentiful this season. I never remember having seen so many during the breeding season, and have come across quite a number of nests already. On June 1st, while having a stroll through the squire's plantation, an ideal spot for bird life, I came across a nest of Long-tailed Tits, full to brim, as the saying is, with youngsters. The puzzle is, How does the little bird manage to rear such a number in one brood? What a pleasure it would be to Canary breeders this season if it could be done! As these youngsters were almost fully fledged, I did not handle them to see how many were there, but there were at least, I should say, eight. About a yard from this nest I started a Blackcap, and had a hunt for his abode, and at last discovered it very low in a small tree, containing five young, about four days or so old. This bird is also fairly common with us. On June 6th I observed a Corn Bunting flitting on a hedge, but failed to find his nest. Thrushes, Blackbirds, etc., are all now busy, many having finished their first brood, as a large number of youngsters are on the wing. Wagtails are also fairly numerous, a few nests having been found. Sandpipers are also to be heard. The nest of the Kingfisher has been discovered twice this season. Last year they were very plentiful; I had no less than nine brought to me one morning, all fully fledged, but let them all away. Swallows are plentiful, being mostly all employed nesting, but have not heard of any rarities being found yet. In this week's "Berwick Advertiser" I saw something that is of great importance to bird lovers in Scotland. A correspondent from Duns has observed a pair of Wrynecks feeding, and asks if it has ever been known of their visiting so far north? Probably some readers will let us know if they have ever seen them.

CANARY NOTES IN BRIEF.

By Claude St. John.

INFANTILE TROUBLES.

That such things as infantile troubles, to make use of a well understood phrase, occur among the rank and file of Canarydom is only too well known to every breeder. A frequent source of worry to the owner is to see the young stock lately so bright and promising becoming dull and mopy and sitting all in a heap by the hour. Such a state of things is all too often the prelude to a departure for an unknown bourne. It is far easier to prevent this trouble than it is to cure it. A healthy young bird should not be kept on soft moist food too long. Of course, no one would dream of taking them off egg food altogether for some little time after they are quite well able to look after themselves. The change should be brought about gradually, but in about a fortnight after the birds are able to crack seeds with no apparent effort the weaning process may well be complete, and the young thenceforth kept on a diet of good, sound canary seed as a staple. Egg for the time being may well be cut out of the dietary, and its place taken by a little bread scalded in milk and pressed nearly dry, and this only as a change once or twice a week. A little hemp and rape may be given occasionally—more in the way of titbits than as general articles of diet. A piece of cuttlefish is always useful for growing birds to peek at.

THE QUESTION OF GREEN FOOD.

Whether or not green food should be given to young birds is a disputed point. Green food has more than once been accused of causing the loss of young from the trouble referred to, but the fact remains that there are just as successful breeders who give green food regularly to the young stock without ill results, as there are amongst the ranks of those who decry it. To my mind, when trouble arises from the use of green food it is not so much the green stuff that is at fault as the judgment of the giver. It is just as easy to upset old birds by the injudicious use of green food as it is to cause trouble among the young ones. Given clean, healthy foliage, not saturated with moisture, and grown in healthful surroundings, little fear need be entertained in supplying limited quantities of such things as chickweed, green plaintain stalks, green seed spikes of shepherd's purse, or occasional leaves of dandelion.

WHAT TO AVOID.

The things one has to bear in mind in this question of using green food are first and foremost to avoid collecting it from any locality which is palpably noisome and unhealthy. The finest looking and healthiest vegetable growth may very possibly be found growing upon or near to a noisome dunghill, but it does not follow that it is the fittest for birds or anything else to consume. Personally, I should always rejeet it, even if I had no second choiee. Then one should avoid gathering anything that is likely to have been soiled by other animals, or that is dank and wet from falling rain or dews. The neglect of such precautions as these is doubtless responsible for much of the trouble laid to the charge of green food.

A GENERAL SUBSTITUTE.

Fortunately for those whose doubts are not easily allayed and who prefer to give green food a wide berth, we have a really good substitute in rape seed. Either boiled for a minute or two and allowed to cool, or soaked a couple of days or so in cold water, changing the water at least once a day, it forms an excellent and safe substitute for green food, and is at the same time a very wholesome and nourishing food. Provided care is taken to prevent it becoming sour, the method of soaking the seed in cold water is, I think, preferable. In warm weather the seed quickly becomes sour and offensive if allowed to stand in the same water from day to day. But if the water is drained off and fresh added once or twice a day, say, morning and night, the seed will keep perfectly sweet, and will be starting to sprout in from two to three days. When in this condition the birds are extremely fond of it, and it is very nutritious.

APPROACHING MOULT.

Already there are signs of the moult approaching, and a few birds, principally cocks kept singly for singing purposes, are dropping into moult. Whether this is indicative of an early moulting season generally remains to be seen. It will, however, be as well to keep an eye on the earlier hatched birds, and all the birds, in fact, which are to be colour fed. Indeed, it will be wisest to begin giving a little colour food occasionally at once. Do not wait until the birds begin to cast feathers before beginning to give colour food, unless you wish to see the birds finish off uneven in colour.

BEGINNERS: You MUST read the **ANNUAL**

COLOUR FEEDING CONDEMNED.

A lecture given by Mr. Stringer, of Salford, before the Bury C.B.S. on June 11th.

In his opening remarks Mr. Stringer said this question was at the present time exercising the mind of nearly every bird fancier. Though the season was remarkable for the scarcity of young birds, the question was equally applicable to old birds. The subject was interesting, and worthy of special thought. He was an out-and-out opponent of colour feeding, because of the unnecessary trouble, expense and loss of birds due to this method of obtaining colour. The loss of birds was attributed to the injudicious feeding and cramming, which was, to say the least, absurd. Was colour feeding faking? His answer was Yes. He maintained that legally there was no difference, except in the application, between faking from inside and applying colour from outside; both were "fakes," and ought to be treated as such. It was no use accusing each other of colour feeding; every fancier did it, and must do, if he desires to become a prize winner. Colour feeding was carried on to such a pitch that with some judges a good colour was sufficient to secure a prize. Type should receive first consideration and colour last. As regarded the "green blood" theory, he was very doubtful of its genuineness and was of opinion that Cinnamon blood was better. By improving the feather in softness and silkiness a much better colour was obtained, just as was obtained by dyeing silk, which fabric absorbed the dye much better than did cotton. Colour feeding was, in other words, simply dyeing. Another way of obtaining colour was by double-yellowing, which was said to have the same effect. Though he had had no experience of this method, he said he intended to experiment with it this year. Of the

THREE COLOURING METHODS

he said he had the greatest faith in the Cinnamon blood theory, which produced good colour if the feather was soft and silky. He did not believe in giving his birds hot pepper, as this was, in his opinion, too severe on the birds. As a proof that not much colour food was required to get a good colour, he pointed out that if old colour food was thrown into a flight containing several birds, some of them became nicely coloured. From experiments he found that it was not necessary to colour-feed the birds every day. He strongly advised his hearers not to cram. They should get the birds going on colour food, and gradually diminish the supply on the principle that "less coal is required to keep a fire going than to start it." Colour-feeding, besides being a colour producer, was a purgative, and must therefore be weakening, etc. When a bird was low down in health it perched in the corner, and fanciers said "they are always like that when moulting." Moulting, he explained, was not a disease, but a process of nature; just as a tree cast its leaves, so must a bird have new feathers. The blood would only hold a certain amount of colour food, and an endeavour should be made to find its capacity. The corpuscles in the blood really build up the body, the blood being really the means of conveying the corpuscles to various parts of the body. It was by getting the colour food into the blood and distributed by these corpuscles that the change in colour was effected. Birds should be as lively and gay when in the moult as at any other time, and one way of ensuring a successful moult was to give them less colour food. The essential foundation, however, was good health, for without this they could not get a good colour. For this reason he thought it advisable to prepare a bird for moulting as was done for breeding. The food must be of the best, and supplied fresh, if possible. Great care should be taken to ensure a clean supply of utensils. A change of food, together with fresh pots, would have a beneficial effect. It was necessary to have everything about colour-food clean, otherwise the birds would be unhealthy, which meant bad colour. If the food was made palatable, less complaints would be made about birds refusing to eat. At this stage Mr. Stringer gave a practical illustration, which suggested that fanciers should apply humane principles to their birds. Seed, he said, was the birds' natural food, consequently it was preferable to the colour-food, hence they should have a plentiful supply of the best seed. The fallacy of getting a good colour at any price was proved by a remark that "a live bird with a bad colour is more valuable than a good coloured dead one." Another

CAUSE OF BAD COLOUR

was the exclusion of light from the birdroom. He strongly recommended them not to cover their cages. If they desired to exclude the light, they should do so by covering the window with a blind, preferably a yellow one. By allowing the birds to have plenty of light he did not mean they should be placed directly in the sun's rays. Covered cages prevented proper ventilation, and was detrimental to the health of the bird. If the bird was in good health, and the feather was soft and silky, a good colour might be obtained, regardless of the exclusion of sunlight. The use of oil in colour-food was useless in his opinion, there being enough in the mixture without it. He used only cold pepper. Many people advised inexperienced fanciers to give their birds a plentiful supply of colour-food, but he generally found that these people were often those who had plenty to sell. He estimated his season's supply of colour-food at 1lb. to every seven birds, and considered this an excellent sufficiency. He had departed from the colour-food generally used, viz., egg and bread, etc., and substituted Spratts' Egg Food. For half a season he did not use a single egg, and the results were as usual. This he considered most satisfactory, because it was very handy and simple. Besides being cheaper and equally as effective as egg and bread, it was so easily prepared that in a minute or two it was ready for supplying to the birds. He found it had a strengthening effect on the birds, and since using this he had noticed an increase in the egg production. Though he had no proof as to the cause, he was inclined to believe that "Spratts" had somewhat assisted in this respect. At any rate, he thought it worth a trial, and the results had certainly proved most successful. He remarked upon the Bury Society having such a complete series of lectures for the year, and said Bury was one of the few places in England which could make such a statement.

The lecture was followed by discussion, in which several of the members took part. A vote of thanks, moved by Mr. Fallowes, seconded by Mr. Gorton, was accorded Mr. Stringer.

THE LANCASHIRE CANARY.

Discussion on Mr. Barrass's Paper, read at the headquarters of the Rochdale O.C. on June 8.

The Chairman: Well, gentlemen, you have heard the admirable paper just read, and I should now be pleased to hear a friendly discussion, so, therefore, I leave the matter in your hands, and no doubt Mr. Barrass will do his best to answer the questions.

Mr. Steeple: Do you advocate introducing Crest blood?—Mr. Barrass I couldn't say. I should certainly not advocate it if you had good Lancashires.

Mr. Law: Would you breed from brother and sister?—Mr. Barrass: I do not advise pairing brother to sister. I like to breed from winners.

Mr. Steeple: What would you define as a proper type for the Lancashire?—Mr. Barrass: There is a plate hung on the wall which I consider the best specimen we have had published. (The illustration was the Coppy hen published in Blakston's works.) An old Coppy always has a flat head, perfectly flat, without any "droop." The "droop" comes from double coppying. The best yellow Plainhead exhibited at our Town Hall show was double coppied.

Mr. Butterworth: Flat headed birds should not have the mushroom crest. Coppies should have flat skulls.—Mr. Barrass: I like a bird to have plenty of feather. The more you have on a Plainhead the rounder you get it.

Mr. Steeple: Do you think it would be any advantage to train the bird for position in the same way as they do the Yorkshires?—Mr. Barrass: If they did the birds would not gain much by it. The Lancashire had one great fault, viz., that of slipping the perch. This should not be taken as a big fault. If the bird had ninety-nine other good points the one fault of "slipping" would not be missed. Another querist wished to know whether a bird in a dirty condition should take a prize, and Mr. Barrass answered that that depended on the judge. It would certainly count against it.

Mr. Butterworth: I like to see a bird with an easy, upright stand.—Mr. Grindrod: The Lancashire should stand bold and upright.—Mr. Barrass: You never get a heavy bird to stand the same as a light one.

Mr. Mills: How was it that a Lancashire slipped the perch more than any other bird?—Mr. Barrass: Crests and Crestbreds slipped their perches also.—Mr. Eckersley: I think it is through in-breeding.—Mr. Grindrod: It is the same with human beings; a light man could keep his feet better than a heavily-built man. (Laughter.)—Mr. Mills: There is a great percentage slip the perch.—Mr. Steeple: Do you think in-breding has anything to do with this?—Mr. Barrass: I do not think it has, unless they were badly bred.

Mr. Law: Is it a fact that there are not as many yellow birds now as there used to be; is it through not using the ticked bird?—Mr. Barrass: I should venture to say that there are quite as many yellows as formerly.

Mr. Mills: Is it advisable to double yellow?—Mr. Barrass: I have done it and bred good birds, but they come very narrow in feather. Mr. Whitworth: If there is any ticked blood in when double yellowing it will make its appearance.—Mr. Grindrod: I think the best plan is to breed yellow to buff.—Mr. Barrass: Not always. I have seen better results from double buffing.

Another querist: Can you build up a certain without in-breeding?—Mr. Barrass: Oh, yes.—Mr. Howarth: In-breeding is freely done in dogs and horses.—Mr. J. Butterworth: There is a certain amount of deterioration through in-breeding.—Mr. Law: If you wished to in-breed how near should they be related?—Mr. Barrass: No nearer than cousins.

Mr. Heap: What would you do with birds that slipped their perches?—Mr. Barrass: Take the top perches out to prevent them jumping backwards and forwards. That is the cause.

Mr. Steeple: What would be the result from pairing ticked birds together? Should we eventually get Greens?—Mr. Barrass: I cannot say. We should get heavily-marked birds.—Mr. Law: Could we get a Green strain?—Mr. Barrass: I do not know.—Mr. Whitworth: I have put two ticked birds together and bred Greens, with the exception of the tail.—Mr. Barrass: Were they off Lancashires?—Mr. Whitworth: Yes.

A remark was made that a fancier had bred Cinnamons (Lancashires). The lecturer said he had never seen or heard of any.

Mr. Steeple: There was a rumour that Crest blood had been introduced in the Lancashires.—Mr. Barrass: I never tried it.—Messrs. Whitworth and Butterworth: That is so; we could tell by the birds.—Mr. Eckersley: Has it done any good?—Mr. Law: Is there any advantage?—Mr. Barrass: I have not tried it, so do not know. I have beaten birds that have been bred that way. So that is sufficient. I would not introduce it knowingly. We need no Crest blood when we have a good strain. I see no advantage.

Mr. Heap: Is the Lancashire as good to-day as it was ten years ago?—Mr. Barrass: In some varieties, but not the clear yellow Coppy. The others are about the same.

Mr. Barrass thanked Mr. Law for kindly reading the paper, and Mr. Heap seconded.

Mr. Law moved a vote of thanks to Mr. Barrass for allowing his paper to be read, and also for his replies. In doing so he said it was one of the most instructive papers he had ever read. He thought they should all try and beat Mr. Barrass. (Laughter.)—Mr. Steeple seconded.

Mr. Barrass, in reply, said he hoped some fanciers would try to beat him. Such a thing would give him the greatest pleasure.

A vote of thanks to the Chairman was passed, on the proposition of Mr. Grindrod and seconded by Mr. Nadin, and in reply he said it always gave him great pleasure to be amongst his Oldham friends.

COLOUR FEEDING.

By J. Sandiford.

A Paper read before the Greenwich and Deptford C.B.S. on June 13th.

Gentlemen,—Here I will give you our methods of how we get our birds the winning colour. I know there will be plenty amongst you who no doubt will know quite as much as myself—perhaps more—but this paper is for the benefit of novices more than anyone. Many of them think there is great art in getting the winning colour, whereas it is one of the most simple things in the world, providing you have a fair-coloured strain of birds. I think if anyone has fed any hot ones, we have. Firstly, you must see you get the best colour feed on the market, which has been bad to get hold of this year, through such a poor crop of the pimento pod in Spain, but with paying a big price for same we have been able to get almost our usual quantity.

Now we will start with the colour feeding of the youngsters. When your young birds get about seven or eight weeks old start to give them from one to two teaspoonsful of colour feed in every half-pint of your usual egg food, and increase daily to five or six teaspoonsful, and keep on with this mixture till they are about twelve weeks old. At this age we pick out all our best birds, those likely for making fair specimens, caging them all in separate cages, also doing the same with all our old birds—in cages about 14 in. long, 8 in. broad, 12 in. high. This size being as near show cage size as possible, when you do put them in show cages they are almost ready trained to the perches, and steady. We put all our old birds in these cages second week in July, so as to be sure we catch them before they start to moult. After we have got them in ship-shape order—all the third raters being in flights—we commence with a regular mixture daily, consisting of 1 oz. of royal red feed, 3 teaspoonsful of castor sugar well rubbed in a hard boiled egg, and 3 oz. of stale bread, more or less according to the number of birds you have. If sweet bread or crumbs are used no sugar is required. Then we go round and give each bird, in a small-sized egg drawer, one teaspoonful of above mixture, giving the third rate birds a large-sized egg-drawer full. After this we go round and lift every seed box off for about six or seven hours. This is to make sure that every bird gets its daily food.

Make sure their cages are well cleaned out twice a week. With these methods we get a good, even colour all round, and making sure that if there are any winners amongst the young birds they will be a good colour. Plenty of people will say this is rough on the birds, but not so. What harm can any birds take on good eggs, bread, and a pure vegetable? We have kept birds on this mixture for six months without any seeds in full rolling song—just for experience. We continue this feeding till we find any bird moulting their heads, then we leave the seed-box on and give them as much seed as they can eat, viz., best Spanish Canary seed. This is so that they will get fat for the show season.

You must continue giving colour feed when you think they have finished, or you will find they will be patchy round their beaks, causing them to look bad. We give each bird twice a week sulphate of iron about the size of half a split pea.

I forgot to mention that you must only give each bird a No. 1 size thimbleful of best Spanish canary seed during the time they are moulting, also keeping your room well shaded and free from draughts. I think I cannot give you any more details, only what you know, so I will conclude, hoping the young fanciers will have benefited with a little of our knowledge.

After the reading of the paper there was a very animated discussion, and the meeting concluded with a hearty vote of thanks to Mr. Sandiford.

Notes on the Breeding of Green Border Fancy Canaries.

By T. ARNOT.

It is with great pleasure I have read the articles lately appearing in your up-to-date issues, especially those on the breeding of Green Canaries, and I thought probably a few lines on my experience would not be out of place. I may say my experience is confined to that midget of the Canary tribe—and which, I am pleased to say, is advancing by leaps and bounds—the Border Fancy. Some are under the impression that the Green and Cinnamon classes are behind in type and quality, and they seldom appear in any show in such great numbers as their lighter-coated brothers, the clears, fouls and uneven marks. My small experience has been that they have to come under the same class as their brothers, the even marks. These and Greens I have found to be the most difficult to breed to perfection, as, before you get a real high-class specimen, you breed many that are only stock or singing birds, also after the breeding season is finished you find you have on hand thirty or forty of what we call "Sparrows"—very heavily variegated birds—which you can scarcely dispose of even to a dealer; whereas the breeder of clears can always find a ready market for his surplus stock. I merely mention this in case any young fancier may find the same out to his loss. At the same time, I don't say clears or fouls are any easier bred, and, as anyone can understand, when you get an easy-bred variety, you always get keener competition. This is where the novice and the expert, or I should say old breeder, when breeding Greens or Even-marks, comes to an equality, especially in the Green variety. After a breeder has obtained the desired champion, all he needs to do is to keep him in good condition, and not to over-show him. After every show run him into the bathing cage for a plunge, and he is as fit as a fiddle for the next show; simply by giving him a spray or another bath probably on the Thursday before a Saturday show. This variety need little or very often no acquaintance with hand-washing. Now the exhibitor of clears, fouls, uneven marks, and even marks has only to turn his bird out about once or twice at the outside, and it will stand very little chance in the keen competition that is now seen in the Border classes. His bird has to be hand-washed every time to be at the top of the tree, and he must either do this himself or get an older fancier to do it for him, or he will find, on the bird's return from the show, instead of a 1st and special, as was its usual form, it has dropped to vhc, and at the same time the owner's temper and opinion has become slightly ruffled. However, on reading his copy of CAGE BIRDS (and he is generally off for it soon enough the next week), he find the report reads: "1st so and so, in grand condition"; "vhc (his own exhibit), a beauty for type and markings, but completely beaten in feather to-day; wants a wash."

MY START.

I want to see the Green variety in the hands of more breeders, so that we may have better competition and bring the bird to the highest point of excellence. Below I give some of the results of my years of experience, which I hope will be of benefit to some fancier and reader of CAGE BIRDS.

I started to breed Greens in 1887. First pair, buff-green cock and yellow hen. I knew nothing of the breeders nor of the pedigree of the birds, but the hen was very dark, and both were much above the standard size; the cock, however, was very good in ground colour, but very lightly pencilled on flanks and very large in cheek. From this pair I got several yellow-green cocks, very poor in colour.

In 1888 I had—No. 1, pair as above; and No. 2 pair, yellow-green cock; the best coloured bird bred from the above, with a yellow-green hen, extra low set on leg, with good quality of feather and very nice wing carriage. The result from No. 1 pair was much the same as in 1887. No. 2 pair threw birds much too high on leg, but of grand deep colour.

In 1889 my first pair were both yellow-greens of 1888 breeding. No. 2 pair, the old yellow-green hen of 1887, paired to a buff cock from No. 2 pair 1888, the grandson of the hen paired with the buff cock. No. 3 pair, buff-green cock, brother of No. 2 pair (both these cocks, please note, from double yellows). I chose the lowest set birds I could get. The hen was a yellow-cinnamon, very pale in colour, but of grand feather and nice finish, with close-fitting wings. The results were—No. 1 pair, nothing special in type or quality, but sound in colour and high on leg; No. 2 pair, a very fine lot of buff birds, some of them very useful; No. 3 pair, some grand yellow grass-green cocks, also some nice hens, among them being a yellow cock, which secured my first 1st prize for me.

THE FOURTH YEAR A GOOD ONE.

In 1890 my No. 1 pair were No. 3 pair of 1889; No. 2 pair, buff-green cock of No. 2 pair, and yellow-green hen of No. 3 pair, 1889. I chose both of these low set, in case they might throw back to the leg of the double yellow cross. No. 3 pair was the yellow cock, 1st prize winner, mated to a buff hen off No. 2, 1889 pair. From No. 1 pair I had several useful birds, but nothing special; and there was little improvement on what I started with. From No. 2 pair I bred what many well-known fanciers considered to be the best-coloured yellow-green that had been seen for years, and it won a lot of prizes; also a few Cinnamon-greens, which I put away as singers. No. 3 pair did very little. I only reared one young bird from them, and the only point about it was that it was grandly pencilled.

INBRED THE FIFTH YEAR.

You will see my stock was now a good deal in-bred, so I had to purchase; and, after consideration, I decided to secure a buff-green hen, because my cocks were more typical than the hens; they were also better in colour. The hen I got was from a Langholm strain, and Green bred, as I knew the fancier who had bred them for years. My 1891 No. 1 pair were the yellow-green cock of No. 2 pair, 1889, and the buff hen I purchased. No. 2 pair were No. 1 pair, 1890, or buff-green cock and cinamon hen. No. 3 pair same as 1890. This proved a most disastrous breeding season. I only bred seven young Greens, and lost No. 3 pair. There was nothing special amongst the progeny. My attention was now turned on the bib or cheek, which I thought could be improved, also the pencilling down the flanks; because I noticed my birds had a light appearance, and that the deep green colour did not run down under the thighs as I liked. So, to improve in this direction, I bought a Yellow-cinnamon, a good one, and one that won a lot of prizes.

For 1902 my No. 1 and No. 2 pairs were same as 1891; No. 3 pair was made up of a buff-green cock, with as much pencilling down the flanks as I could find, and very little cheek; and a yellow-cinnamon hen. From No. 1 pair the results were poor. I got very few young—nothing special among them; and I also lost the cock. From No. 2 pair there came a few useful birds, among them one yellow-green cock which took several 1st prizes. Amongst the progeny of No. 3 pair were a few nice ones. The best bird was a yellow-cinnamon hen, which did a large amount of winning; the others were nearly all Buffs, but showed great improvement in pencilling and colour.

NOW WELL ESTABLISHED.

I now started and chose nearly all yellow-green hens, with as much pencilling as I could find; and from them I bred a good many useful birds, the best among them being a yellow-green cock, uncle to a bird which proved a two years in succession at the National Show. Another was a yellow-green which stood 2nd two years in succession at the National Shows. I have very seldom seen light legs or beaks, and far less square-end feathers. When I see the true green colour leaving, I go in for a double yellow cross, and then introduce the cinnamon hen. I have never, to my knowledge, used any light or clear blood, and although I have bred them all these years, I have always a few young with the bronze showing on the shoulder or wing corners the first year, and it mostly moults out all right the second moult. Light legs and beaks, my experience tells me, are caused more by age than any other cause.

To Attract the Birds.

Up to the present time our summer has been anything but summer like; but we may possibly get a spell of very hot dry weather. Should this come, bird lovers should not forget to place pans of water in the garden for the feathered life frequenting it. Where one can spare the room, a small artificial pond is a source of great amusement, as the birds soon find it out, and frequently resort to it to drink and bathe. Occasionally we may catch sight of some rare visitor attracted by the water, for this birds must have, and are just as much enticed by it as they are by food; in fact, more so during the summer, for then wild bird food is plentiful everywhere.

BENGER'S

Food

assists nature.

It is used mixed with fresh new milk and forms a delicate and nutritive cream which can be enjoyed and assimilated when other foods disagree. It is entirely free from rough and indigestible particles which produce irritation in delicate stomachs.

Mothers and interested persons are requested to write for Booklet, "Benger's Food and How to Use it." This contains a "Concise Guide to the Rearing of Infants," and practical information on the care of Invalids, Convalescents, and the Aged. Post free on application to Benger's Food Ltd., Otter Works, Manchester.

THE FEEDING AND MANAGEMENT OF MY BRITISH BIRDS.

By JAMES CLARKE (Rothesay).

The keeping of British Birds is a very interesting hobby. Some, I know, object to caging wild birds, but if properly cared for they prefer cage life to their liberty. To prove that the caging of wild birds is not cruelty, I have time and again given birds their liberty, only to find them back again in a short time. I had a Chaffinch which I let out five times. I put a piece of wool on its leg to be certain it was the same bird, I opened the cage door and let him fly out, but he would have none of it. No sooner was the door opened than he would be back to his cage again. Greenfinches and others I have also liberated, but the majority were sure to come back to their old quarters. Of course, there are some birds which will never tame, and these should be set at liberty, as they will never be any use to their owner.

LARGE CAGES DESIRABLE.

In the caging of British Birds always have a suitable cage for them. Err on having the cages on the large side. Keep the cage perfectly clean with a layer of sea sand on bottom. Also use the bath freely, give plenty of fresh air, and proper food and your birds will be a credit to you. Unless you are prepared to give British Birds every attention it is certainly a sin to cage them.

I will now give a few hints on birds I have kept in confinement. The Goldfinch is, I think, one of our prettiest Finches. To keep this bird any length of time one must give hemp seed pretty freely. Feed on teasel, canary, small sunflower and a teaspoonful of hemp daily; also a pinch of maw and inga once a week. In spring give each day a dozen heads of dandelion. These are a grand pick-me-up after the long winter months. During the moult give a good supply of hardheads and thistles; also a pinch of inga daily, as I am convinced this seed greatly improves the blaze.

THE HEATHER LINTIES.

Twites, or Heather Linties as they are called here, are merry little chaps and easily catered for. Give canary, rape, teasel, linseed and get from your nearest farmer the screenings from the threshing mill. Mix a quantity of this with the above, and you have a grand mixture. Give a supply of hardheads all through the moult, but no green food, as they are better without it. The Linnet is a beautiful songster. To moult him a rich, nutty brown colour for exhibition, feed same as for Twite, but on no account give hemp during the moult, or you will bring him out too dark. Do not omit to give plenty of hardheads, as in nearly every one you will find a small maggot which is a grand pick-me-up for them in the moult. The Redpoll is a lively little fellow. His song is not much account, but as most of our larger shows now provide a class for Redpolls they are worth looking after. Feed same as Linnet and Twite. Siskins are pretty little songsters, but are great gluttons, therefore much care should be taken in the feeding of them. Feed on canary, rape, teasel, small sunflower and a pinch of hemp and maw seed once a week. In the moult give plenty of hardheads; also a teaspoonful of colour food every morning. See that he finishes this before putting in seed.

Greenfinches make nice pets, and are also very pretty birds. Feed on canary, rape, teasel, small sunflower and a pinch of hemp, but not too much of the latter, or you will darken the plumage. When moulting, give a teaspoonful of colour food every morning before seed. Bullfinches are beautiful birds, and easily tamed. Feed on small sunflower, rape, canary, teasel, and, for a treat, a little hemp, but don't overdo this seed, or you will darken the plumage. In the moult give privet, elderberries and brambles. If you have any difficulty in getting the berries, get a pound or two of home-made bramble jelly. Put a small teaspoonful every day in the drinking water. This will greatly improve the breast colour. A few years ago I had a Black Bullie with white wings. I moulted it on the above feeding, and was surprised to see it come out its natural colour.

A TIP ON TAILS.

Hawfinches are large, handsome birds, and make grand pets. Feed on sunflower, canary, and a little hemp. They are not very fond of green food, but try them with green peas. They are also very fond of red shank, a weed very often found among turnips. When moulting give plenty of haws, pips, mulberries, and beech mast. The two latter they are very fond of; also give a little colour food. When I first kept Hawfinches I could never manage to get their tails right, but I have no trouble now. Instead of having the perches level with each other, lower one of them four inches. Try this tip, and you won't be disappointed.

Snow Buntings are very pretty birds, but should be kept outside if possible. When moulting this bird I always hang the cage outside night and day, and they come out in grand form. Canary is the only seed I can get them to take. They should also have a few mealworms daily.

HAND REARING REDSTARTS.

Last summer I was successful in hand rearing a nest of four Redstarts. I took them from the nest when they were eight days old, and fed them for the first three weeks every hour on Trower's Cecto, greenfly and a few mealworms cut in small pieces. They moulted out all right, and turned out to be two hens and two cocks. Yellow Wagtails make great pets, and can be kept in grand health and condition with Trower's Cecto, and four or five mealworms daily. It is a treat to see them running along the cage to get the mealworms.

I have omitted the green foods generally recommended. I used to gather all the green food I could lay hands on, and give to the birds, but with the exception of the dandelion heads in the spring and the hardheads and thistle in the moult I am now convinced that unless you can give British Birds green food in a dry state they are better without it.

A PEDESTRIAN PARROT.

By F. FINN, B.A., F.Z.S.

(*Continued from page* 531.)

NEW ENEMIES.

Nowadays, however, the poor Kakapo has to face a very great outside danger. The Maoris used to esteem it as food, and the English colonists, with the idea of keeping down the undue exuberance of the introduced rabbits, brought in some years ago quantities of stoats, weasels, and ferrets, which have naturally not confined their depredations to "fur," and find in a flightless bird an easy prey. Dogs which have run wild have also caused much havoc. The New Zealand Government have, however, very wisely set apart certain islands off their coasts as sanctuaries for these and other birds, so that

Kakapo, or Owl Parrot.

there is some hope of maintaining the species even if it perishes on the mainland. Mr. Richard Henry, the caretaker of one of these stations, has published a small book giving some very interesting information about several species, to which I have been indebted for much of the facts given in this article.

THE EVOLUTION OF THE KAKAPO.

It may be asked how a member of a family of tree birds like the Parrots came to lose its wing power, and take to a ground life in this way, for it is obvious that the Kakapo is a degenerate bird. The answer would seem to be that the bird was originally a flyer—and probably a good deal smaller—but had acquired ground-feeding habits, and found, when there were no beasts of prey in New Zealand but a fair allowance of Hawks, that it paid better to live on the ground altogether, so that its wings first became useless and then degenerated in size. In this connection it is interesting to know that there are two ground Parrakeets in Australia—the Swamp Parrakeet (*Pezoporus formosus*) and the Night Parrakeet (*Geopsittacus occidentalis*). Both have plumage very similar to the Kakapo's, but while the former is a slim, elegant bird, and a day feeder, the latter is nocturnal, and very like a miniature Kakapo except for having long wings.

KAKAPOS IN CAPTIVITY.

All these ground Parrots are very rare in aviculture, but all have been on view at the Zoo, where the subject of our article now is. It is fed on raw green food, turnips, parsnips, apples, cabbage, etc., and has been brought over on such diet; ordinary Parrot food is quite unsuited for it. It came and is kept in a large box provided with one perch, and fronted with ordinary wire-netting, so that it is evidently not much of a biter, in spite of its size. Most of its time by day is spent under a heap of straw, but at night it comes out, sits on its perch, and proceeds later to eat a huge supper. It is said to have shown great tameness and gentleness, and the like has been recorded of other specimens of this curious bird in captivity.

How I Manage my Breeding Stock.

By F. VINCENT.

Being the Essay to which Third Prize was awarded in the recent City and Suburban A.C.B. Competition.

To commence a successful breeding season it is most important to have good, roomy and serviceable cages, such as the following sizes:—Doublo breeders, 38 in. by 16 in. by 10 in., suitable for muling as well; single breeders, 19 in. by 16 in. by 10 in.; this size is also useful where eggs of muling pairs may be transferred to be hatched and brought up by foster-parents. Box cages, suitable for moulting your show and other odd birds, size 15 in. by 13 in. by 7 in.; flight cages, for use after breeding season, size 36 in. by 18 in. by 11 in., of box-cage pattern. All cages should be painted inside and out with sanitary paint, or, better still, enamelled light blue, outside to be varnished black, fitted with moveable fronts and zinc sand trays, good square perches—made of pine wood is the best—either ½ in. or ¾ in.

The next, and by far the most important, is to have suitable, healthy stock, that will breed winners. First of all it is necessary to have a good idea of what an ideal bird is, either by breeding to various club standards, or by visiting shows and carefully noting the winners and studying their points—type, quality and colour of feather and carriage.

WHAT TO SELECT IN NORWICH.

In breeding Norwich it is necessary to use a few variegated birds to get colour into your stock. The usual routine is to pair Buff to Yellow and vice-versa, but you will find colour is not what it should be in your young birds; therefore, to be a successful colour-feeder, you must also be a successful colour-breeder. In selecting your Norwich stock birds, avoid those with flat and snaky heads, coarse, open feather, long flights and tails. The cock bird should be of good size and colour, have good head, thick neck and deep chest, and be as short and chubby as possible. If such a bird does carry long feather, do not discard it if you know it comes from a winning strain. I like the hens to be of fairly good size. As a rule they are usually the feeders and breeders, etc., and must be of good type and quality, as tight as wax in feather. Some breeders use extra big cocks and large hens for producing stock birds, and big cocks and medium-sized hens for show birds, which I think is the best method.

THE CORRECT THING IN YORKSHIRES.

In Yorkshires you must have position and length in stock birds, always discarding birds with thin necks, frilled chests, hollow backs, fluffy thighs and fish-shaped tails.

A Yorkshire Canary should be slim, of good length, well up in position, and feathered like wax; and do not forget that the best show birds are very often bred from the best stock birds, which possess type and length, and which sometimes show a little breed and shadow of the Belgian.

CONCERNING CRESTS.

In Crest breeding, to be successful it is necessary you should buy from the strains you know have bred winners, so as to improve your stock. Should you, therefore, be successful in breeding a good bird, and should you wish to sell it, you can easily get a high price for it, as good Crests and Crestbreds are valuable. In pairing marked Crests to clear Buff Crestbreds, you are sure to get good birds providing your stock birds are from a reliable strain. The Crestbreds should possess abundance of feather of good quality, and must also have good broad skulls. The head feather of a really good Crestbred will cover the beak when turned over. The Crestbreds should possess density of feather, droop, shape, quality, etc. Before pairing Crests trim off all lashing round eye, and the long feathers at the vent should be cut short.

ON THE MARK.

Your cages ready, your cocks in full song, and your hens flapping their wings, you may place your selected pairs in double breeding cages. See you have a piece of cuttlefish fixed between wires, also a supply of sand and pieces of old mortar, if possible. The hens should be placed in one side of the breeding cages and cocks in the other, and should remain there two or three days. As soon as you see the cock birds feeding the hens through wires, withdraw the slides. After a day or two you may fix the nest pans, not in some out-of-the-way corner, but on a level with perches, where air and light may get access. For nesting material use either medicated cow hair or moss and charpie. For Crests I advise the use of cotton waste. This should first be boiled and allowed to dry. With this material hens are not so liable to sweat. Hens should be lightly sprayed during the nesting season.

GENEROSITY IN DIET.

Diet should now be liberal; good seed and fresh egg-food should be given. Fresh eggs should be used. The proper way is to place the egg in cold water and gradually bring it to a boil; allow three minutes for it to harden. Both white and yolk may then be given. Some people first boil the water, then plunge the egg in; as soon as this comes in contact with warm water the white becomes tough, and by the time the yolk is boiled hard the white is very tough, and is most indigestible to man, let alone birds. The white and yolk should be mixed with Osborne biscuits or stale bread. Soak the bread in water, then squeeze out all moisture and mix with an equal quantity of egg. Soaked rape seed and tender leaves of lettuce may also be given.

LAYING AND INCUBATING.

As soon as the first egg is laid, remove it and substitute with a dummy. The egg should be placed in a box on a layer of bran. On the evening of the day on which the hen lays the third egg replace the clutch, and gradually cease giving egg food until the evening before the eggs are due to hatch. A stud register should be kept; the parents number of cage, number of eggs laid, and date due to hatch should be kept therein. If the cock bird seems happy, and hen comes off to feed and drink, do not separate them; but if the cock bird worries the hen, remove him. As a rule the best results are obtained by leaving them alone. After 14 days' incubation the eggs are due to hatch. Egg food should now be given twice daily. Milk sop, sprinkled with maw seed, may also be given after the third day, also a little rape, first soaked in boiling water, and hemp seed crushed.

WEANING AND MOULTING THE YOUNG.

After a month separate the young birds from their parents and wean them on crushed canary and other seeds, gradually decreasing the egg food; but do not cease giving it till after the moult. The parents may be given a few days' rest, and another nest or more may be obtained. Breeding should cease in July. Birds you intend exhibiting should be caged separately in box cages and got on to colour food. Those you intend keeping for stock should be placed in flight cages. In cases of picking in the nest, add one teaspoonful of pepper to five teaspoonfuls of egg food, mix thoroughly together, and give it to the old birds as well. Others should be fed as follows:—Commence by giving one teaspoonful of pepper and one of cane sugar to four teaspoonfuls egg food, mix thoroughly, and give one teaspoonful fresh daily to each bird, gradually increasing the amount of pepper to two teaspoonfuls, so as to get the colouring food well into the system; also give linseed. Give a bath or spray every two or three days. A piece of sulphate of iron, about the size of a hemp seed, should be added to the bird's drinking water once a week. This will act as a tonic, and is recommended for fixing the colour. Birds should be kept from rays of sun and free from draughts. It is advisable to run them into a show cage occasionally, as it breaks them of their nervousness by being handled. We often see a good bird put back a peg on account of its restlessness and timidity. This might be avoided by previously handling the bird in a show cage.

MULING.

The selected pairs, before being run together, should have been previously kept in double breeding cages face to face, separated only by the wire slide. Give as much natural seed as possible, also egg food. As soon as you see your Goldie whisk his tail from side to side, calling and singing incessantly, and his beak is clear (although on that point many a Goldie with other than flesh-coloured beak has fertilised eggs), you may be pretty sure your prospects of breeding Mules will be successful. If you want to breed good Mules, you must use large yellow hens, of Norwich type or Norwich-Lancashire cross. The slide should be drawn, and Goldfinch allowed to run over night with hen. If he is too interfering, he must be removed, and the hen allowed to hatch and rear the Mules alone. Some Goldies are exceptionally good. I had one who remained with a hen Canary the whole of the season, and successfully reared three nests of 11 Mules. He was very attentive, and would even cover the eggs when the hen was off to feed. It was after they left the nest and began to feed his jealousy was aroused and he would sometimes peck them, but with no ill results.

BREEDING HYBRIDS.

For Hybrid breeding, pair the following if you would like to produce some winners or valuable Hybrids. The cock bird to be the first variety named—Goldfinch-Bullfinch, Goldfinch-Greenfinch, Linnet-Bullfinch, Greenfinch-Bullfinch, Siskin-Greenfinch, Siskin-Goldfinch, Redpoll-Goldfinch, etc. These birds should have been procured in autumn, so as to be used to cage life, etc. They should be paired in double breeders, and the slide removed after a week. Do not worry the birds. Some breeders cover the bottom with fine grass, etc., up two inches or more. The perches should be placed three or four inches from the grass. Some hens will lay on the bottom, others will build a nest. Anyhow, you must keep a sharp look out for eggs, in case they get broken. It is really the best plan to separate the cock bird before the egg is laid—that is, if you can tell when the hen is about to lay.

FOSTER PARENTS NEEDFUL.

The eggs secured should be placed under reliable hen Canaries in single breeding cages, letting the Hybrid pairs sit on a few dummies. After a week take the dummies away, and let them have another try. Give plenty of wild seeds, live insects from fruit trees and egg food. Of course, you may have many disappointments; but should the first clutch of eggs be unfertile, try again. "If others can be so successful, why not I?" should be your motto. Should you be successful, the young should be fed and got on to colour food as advised for Norwich, etc. As a final word, give good seed, fresh water, and study each individual bird. These little things are most essential to their welfare and your success.

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "The Eyric," Salisbury-road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

Young Bird Life.

During the month of June there are many objects of interest and beauty constantly courting attention. Perhaps of all the attractions of country life there is no prettier sight than the devotion of the parent bird to its young. Human beings are sometimes inclined to be discontented with their lot in life: they even express envy of the birds and beasts of the fields, because they ignorantly imagine their existence is one of pure pleasure and delight—that work does not enter into the everyday routine of the animal world. To dispel such erroneous ideas, they have only to carefully study the habits of a pair of our common birds during the rearing of their family of hungry youngsters.

Take, for instance, the daily life of a pair of Starlings, with a healthy brood of some four or five chicks. They must be about at the very first peep of daylight, for their young ones have been without attention for possibly seven or eight hours, so they need to be fed to repletion before the workers can possibly partake of their own breakfast. The feeding ground may be some distance away—possibly some freshly-mown lawn, exposing the grubs and caterpillars, collected in fancied safety among the cool roots of the grass; these have to be hunted out, secured, and conveyed to the nest. The old birds will continue to find and take to the young ones insects of various kinds during the whole of the day, the only relaxation from their duties being during the afternoon, when wild birds generally seek the cover of the hedgerows and trees. But as the sun gets nearer the west the work must be carried on with renewed vigour, for the youngsters need "packing" for the coming night. And so, after a hard day's toil the workers retire to roost, but only to re-commence their task at the first sign of returning day.

When the brood leaves the nest the lusty family must require constant attention. They are now big and always hungry, and for a few days before they are able to fend for themselves must be a constant source of trouble and anxiety. They are young and inexperienced, and enemies are numerous. When one considers the brood after brood of young birds hatched and brought to youth, the waste in wild bird life must be enormous, or we should be overrun with them—the air would be full of winged creatures, and our seed crops and fruit would be eaten before we could commence to gather them in. It is just previous to, and after the young ones, leave the home, that the mortality generally commences. The weak ones sicken and die, and the "survival of the fittest" is constantly taking place, although, as if to condradict this rule, we are frequently finding examples to demonstrate the opposite. In a brood of young Larks there are sure to be a bird or two stronger than the others. These will leave the nest before the latter, wandering some distance away. If the sun is hot and the air is warm, they will take no barm; but should clouds cover the sky the birds get cold and chilled, and consequently meet an early end. The parent birds find them and feed them all the while they are able to take nourishment, but transfer their attentions to the weaker birds as soon as the others refuse; and this the old ones do without any apparent regret at their untimely end. Such examples are frequently met with.

Young Linnet.

The same thing exists among the perchers. A family of young Linnets is disturbed. Two of the five are strong and healthy, and are consequently top birds; they scramble out and get down into the rough underwood, when possibly a cold night is more than they can stand. Examine them carefully; the feathers are soft and downy, but very scanty, so much so that in places the bare skin is visible. The wing feathers are only partly developed, some of the shafts or pipes being visible, two-thirds the length of the feathers, consequently these undeveloped wings do not cover the body, as a protection against wind and wet. Among some of the smaller birds the habit of returning to the nest to roost is so prevalent that one can at any time after sundown catch the whole family by simply placing the hand over the nest opening. But it is very doubtful if the common birds of the hedgerow return to the uppermost branches, where the nest is situated, to roost, for in the majority of cases they would be unable to reach it.

Notes and Queries.

Blue Tits at War.

An interesting incident in which Blue Tits were concerned was witnessed by a gentleman on a June morning near Penshurst, Kent. His attention was attracted by a small cloud of dust in the road, and, walking up, he saw two of the little birds fighting furiously, each grasping a leg in its beak. So intent were they on fighting that he was, it is said, enabled to pick them up.

Rough on the Sparrows.

A large stone ventilator was placed in a villa near Edinburgh, writes "Fairplay." In it the Sparrows built every spring. When the Starlings came, a neighbour used to watch them drop the young Sparrows out before taking possession. This took place for some years, when we unscrewed the zinc covering in the room, and a large bucket of straw, etc., was removed from the hole, which was 2 ft. broad by 1 ft. square. We barricaded it to prevent future misdeeds.

The Nest of the Sparrow Hawk.

In the centre of the wood, high up in a fir tree, is the nest of the bold Sparrow Hawk. A wary bird is this at the time of nesting. You may possibly catch sight of him a dozen times during a day of watching anywhere but in the vicinity of the eyrie. He seldom soars or hovers above it as other Hawks do; it is only in the very early morning and late evening that he indulges in this exercise, and then only for a very short period. The hen bird is a close sitter, and will frequently remain upon the nest after the tree trunk has been shaken or struck sharply with a stick. Upon one occasion I remember a climber getting within ten or twelve feet of the nest before she slid off, and gliding through the trees she remained in the vicinity, uttering from time to time a tremulous scream.

In the Cherry Orchards.

The Blackbirds and Song Thrushes are having a sorry time of it now in the cherry orchards in Kent. They cannot for the life of them resist the tempting fruit daily getting more toothsome, and they have been so used to human beings that they see no danger in the man calmly sauntering under the trees with a long stick in his hand. As many as 50 to 100 birds have been shot in a day, so that the slaughter during the ripening of the fruit must be enormous. The grower has a perfect right to protect his property, but one wishes some other method could be employed.

Watching the Wild Duck.

Rarely does one have the opportunity of seeing a brood of Wild Ducklings when they imagine themselves unobserved, and the suspicious mother is unaware of any intruder. Like miniature boats convoyed by a man-of-war, they dart hither and thither at an amazing speed; first to the right, then to the left, they paddle out of the direct course, after a gnat or fly invisible to the observer. Calmly the mother bird sails on with an occasional quack, her quick eye watching for any suspicious movement threatening danger to her brood. A young one gets behind, and with energetic paddling he hurries to catch his companions. Although the parent may guard her family against ordinary danger incidental to bird life, she is powerless against the attacks of ravenous pike, so plentiful upon some waters; the healthy youngster is pulled under and devoured before he is aware that danger is near.

HERE IS A SAMPLE PAGE OF FANCIER'S TERMS.

76 "CAGE BIRDS" ANNUAL.

SCRAGGY CREST: When the feathers forming the crest are short, narrow and deficient in substance. The proper shape and droop of the crest suffers as a natural consequence. See also *Mop* and *Hairy* crests.

SELFS: A term applied to Cinnamons and Greens whose plumage is unbroken by any other colour. It does not, however, imply the absence of the dark pencilling, which is a characteristic of these varieties.

SHEEN: See *Burnished* and *Bloom*. Is also, but inaptly, sometimes used to denote the mealy colour of buff birds.

SHIELD CREST: Indicates that the crest, when viewed from above, is shaped somewhat like a shield, being round in front, widening a little backwards, and terminating in a straight line across the back of the skull. The shield-shaped crest always loses points in competition with a circular-shaped crest of equal quality.

SIB-BRED: Birds bred in-and-in (*i.e.*, paired to near relations, brother to sister, mother to son, etc.) for many generations. Such birds are much sought after for mule breeding. If overdone, sib-breeding results in degeneration.

SIDE: Is a term usually applied to the Scotch Fancy, in which the proper formation of the sides of the body is of some moment. The wings should be folded closely and firmly to the body, and the sides of the body appear flat. See also *Long-sided*.

SIX-MARKED: An even-marked bird with six points, viz., marks on each eye, both wings, and each side of tail.

SIX-POINTED: Synonymous with *Six-marked*, which see.

SLACK: A looseness of plumage, generally seen at the thighs. The term is applied to Yorkshires and Norwich and all varieties in which tightness of feather is essential, and where slackness of feather is objectionable as showing a tendency to untidiness.

SLIPPED TOE: Is a crippled condition of a toe, usually the hind toe, more often seen in young birds soon after leaving the nest. The toe curls under the foot, and is directed forward. The method of cure is to take a quarter-inch of india-rubber tubing, such as is used on a baby's feeding bottle, pass it over the front toes, and, keeping the hind toe in the ring, push it up the shank of the leg. The rubber ring may be removed in about a fortnight, but should be replaced at once if the toe again comes forward.

SMOKY: This is a term generally applied to Greens and Lizards. In the former it denotes a want of distinction between the pencilling and ground colour and a smudgy ground colour. The same remark will apply to the Lizard, except that the spangling loses its distinctness, and has a tendency to merge gradually into the ground colour. See also *Muddy colour*.

SNAKY: A term applied to the long, thin neck, and narrow, drawn-out, finely-cut head and beak of the Scotch Fancy.

SNAKY-HEAD: Is sometimes applied to the rather slenderly-formed head and beak of Greens, but is more generally applicable to the finely-chiselled head and beak of the Scotch Fancy and Belgian; also the lengthy beak and head of the Goldfinch.

SNIPY-HEAD: Synonymous with *Pinched Skull*. Is a thin and narrow skull, giving the head a drawn-out appearance. Is very objectionable in most birds.

SOFT CONDITION: A loss of energy and vitality. May be due to fatigue from over-showing. Birds want a complete rest and a tonic. See *Over-shown*.

SOFT MOULT: See *French Moult*.

SOUR HEAD: A term usually applied to Yorkshires with slightly over hanging eyebrows. It is a bad point. See *Beetle-browed*.

SPANGLED: See *Spangling*.

SPANGLING: The series of small black spots adorning the plumage of the Lizard, and one of its most essential characteristics. The spots should be profuse, bold and distinct, and as black as possible, and be sharply separated from the ground colour. Applied also to the markings of the Starling, Wryneck, etc., and to the markings on the back of the Bramblefinch. See also *Rowing*.

Send this coupon with your order and we will send you a Packet of PICTURE POSTCARDS as well.

Please send to the undersigned one copy of CAGE BIRDS ANNUAL, Part 1, and a packet of Picture Postcards "Dickie in the Dumps."

I enclose Sixpenny P.O. to defray cost of same, including postage.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins. June 22nd, 1907. N.C.O., Royal Engineers, Aldershot.—"Hummel arrived; delighted with it.—J. H. Munford." "June 12th. Stobo Castle, Stobo, N.B. The Hon. Mr. Philipson has had the Hummel a week and will keep him; he is such a sweet singer." "June 24th. Ash View. Allmans Mold. I am writing to say I am delighted with the Hummel purchased a few months ago. Please send another.—R. James to Varney, the Great Hummel Importer." Sole proprietor and only importer of Hummel Rollers. Stratford, London.

PURCHASE DIRECT,

And save all intermediate Profits and delay, besides making sure of getting what you ask for. Any child can make a paper imitation, but NOT imitate the stock or the quality for price—that is where they get sadly left behind.

See the following Prices and read a few more unsolicited opinions. Many others of same dates open for inspection.

1906 Norwich Cocks, 5/6, 6/6, 7/6, 8/6 up; Hens, 2/-, 2/6, 3/6, 4/6; Pairs for breeding, 8/6 up; Yorkshires—Cocks, 5/6, 6/6, 7/6, 8/6, 10/6 up; Hens, 3/6, 4/6, 6/6 up; Pairs for breeding, 9/6, 10/6 up; Cinnamons, 12/6, 15/- pair; Crests and Crestedbreds matched for breeding, 10/6, 15/-, 20/-, 30/- up; Crested Cocks, 6/6, 7/6, 10/6 to 40/-; Crestedbred Hens, 3/6, 4/6, 5/6 each; Feeding Hens, 3/- and 3/6 each.

1/9, 3/9 **1907** 1/9, 3/9

Pure Norwich or Yorkshire.—First round Cocks, 3/9,, 4/6, 5/-, 5/6 each; Hens, 1/9, 2/-, 3/- each, or two Norwich Hens for 3/3; Pairs matched for next season's breeding, 5/9, 6/6, 7/6 per pair. These will grow into money.

Purchasers should do well to remember that all kinds of Cross-breds are sold as Yorkshires and offered at lower prices than it is possible to get pure-bred Yorkshires for, but not here.

For MY 6 months' approval terms send for particulars. This is not a mean, pirated or professional copyist advertisement; all birds here offered are **in my possession,** hence no delay and no three or four profits.

BORDER FANCIES.—Splendid stock, purchased owing to late owner going abroad, including some good evenly-marked birds. Particulars on receipt of stamped envelope.

GOOD FOR TWO ROUNDS YET

All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-.

These are the BEST VALUE ever offered.

Travelling Cages in all cases charged 3d. extra.

Very Good Book.

Sandway, Piercefield-rd., Freshfield. June 17th, 1907. Thanks for book on German birds. I think it a very good one.—W. G. Smalley to W. Rudd.

Excellent.

12, Mill Cliff, Buxton, Derbyshire. June 19th, 1907. Birds, etc., arrived safely. Accept my best thanks for the excellent pair of birds sent me, also prompt attention.—G. Brunt to W. Rudd.

Give Every Satisfaction.

28, Mana-ter., Shiremoore. June 18th, 1907. Birds arrived all right. Pleased to say they give every satisfaction.—Wm. Spence to W. Rudd.

More than Satisfied.

3, Lydden-gr., Guelph-st., Earlsfield. June 18th, 1907. Bird arrived quite safe. I am more than satisfied.—Mr. Edwards to W. Rudd.

Great Satisfaction.

Coastguard Station, Kingsdown, Dover. June 18th, 1907. I have great pleasure in informing you that the Canary I had gives great satisfaction and sings very nicely. You may get further orders from this station later on.—G. Harris to W. Rudd.

Soham. June 17th, 1907. Lady —— received the cage, and is very pleased with it.

Never had such before; Started Nesting to-day.

1, Park-view, Abertillery, Mon. June 17th, 1907. The pair of Yorkshires arrived quite safe and in the pink of condition. I am more than pleased with them. I have never had such a pair of birds as these before, and I have had birds from dealers. The hen has started nesting to-day.—Wm. Swannack to W. Rudd.

Good Type.

30, Old Butt-lane, Talkooth Hill. June 20th, 1907. Birds to hand in good condition, and are a good type of the Yorkshire Canary. You have no need to be afraid of giving the name. Please accept best thanks.—F. Johnson to W. Rudd.

Splendid Value.

9, Fawcett-st., Gainsboro'. June 20th, 1907. Received Canary quite safely. Am delighted with it. Thanks very much for prompt attention to my order. It is splendid value for the money. In future when I am requiring birds of any kind I shall write you.—M. L. Knott to W. Rudd.

Satisfaction.

Rose Villa, Avenue-rd., Ashby-de-la-Zouch. June 20th, 1907. I beg to inform you that I received the pair of Budgerigars safe, and they are to my satisfaction.—E. Dunn to W. Rudd.

Splendid Quality.

Somerset House, High-st., Glastonbury, June 20th, 1907. Bird to hand quite safe, and give every satisfaction. Thanks for quick dispatch and such a splendid quality hen.—J. J. Brain to W. Rudd.

SONGSTERS! SONGSTERS!!—For Tutors or Cage Pets, fine collection of specially selected birds, 8/6, 10/6 up.

Easy payments by joining my Bird Club. Particulars free.

Full extended current Price List free on receipt of address, or my Amateurs' Guide (containing over 250 illustrations) free on receipt of three penny stamps.

Never such Luck before.

Park House, Hildenbrough. June 17th, 1907. Please send a tin of Eggertine. I find it makes my bird look so well and strong, and I never had such good luck before.—Mrs. M. Coppard to W. Rudd.

Cannot Praise it too much.

1, Couppees-place, Castle-st., Luton, Beds. June 22nd, 1907. Please supply me with another tin of Eggertine. I may say that it is good stuff for my young birds. I cannot praise it too much.—C. Ellis to W. Rudd.

Lymm-lane-crossing, Lymm, near Warrington. June 21st, 1907. Will you kindly send me a shilling tin of Eggertine? I have used the other, and the birds like it very much.—G. Lightfoot to W. Rudd.

Very Good for Young Birds.

29, Whitford-st., Holywell, N. Wales. June 18th, 1907. Please forward a tin of Eggertine. I find it is very good for young birds.—S. Richard to W. Rudd.

To the SCEPTICAL and those who only believe in old-fashioned methods.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size. The sale this season is phenomenal; never before has it been near so great, and this owing to its merit and merit alone.

W. RUDD,

THE Bird Specialist,

NORWICH.

Telegrams—"CANARIES, NORWICH."

MULES—HYBRIDS—continued.

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

WANTED.

WANTED, good German Roller cock for winning Norwich cock.—Glover, Hairdresser, Nantwich.

OFFERS, British or Budgerigars, for 50 "Pearson's Magazines," clean.—Coward, Organist, Stroud.

WANTED, cock and hen Mules; state lowest price.—Santon, 4, Blossom-st., Norton Folgate, E.C.

WANTED, fed British birds for outdoor aviary.—Bristoll, Green-lane, Wilnecote, Tamworth.

PARROT cage wanted, must be square and not under 20 inches wide.—F. Howe, Wellingborough.

WANTED, Budgerigars or Canary for whitish Java and British.—"Broadway," Westby-rd., Boscombe.

WANTED, cock and hen Mules, state lowest price.—Santon, 4, Blossom-st., Norton Folgate, E.C.

WANTED, young Canaries; will exchange foreign birds.—Pearson, Greenwich.

WANTED, your surplus stock you don't want; will exchange it for stock you do.—Pearson, Greenwich.

WANTED to purchase, surplus stocks of Canaries, cheap for cash.—Clarke, 17, Brandville-rd., Yiewsley.

WANTED, hen Mule Goldfinches and hen Linnets.—Henderson, 2, Gloucester House, Gurney-st., Kentrd.

WANTED, good bred Norwich, or offers, exchange good oil cooking stove and large lamp; approval.—Press Agent, Midsomer Norton.

WANTED, Mules, Goldfinches, Linnets, Canaries, Parrots, any kind bird.—Baker, Herbert-st., Bedminster.

WANTED, to buy one or two nests of young Hawfinches, either to rear or picking up for themselves.—F. Turnber, Prince's Golf Club, Sandwich.

WANTED, Canaries and British birds, exchange clap nets, rabbit nets.—F. Cooper, 52, Hembury-st., Harpurhey, Manchester.

WANTED, young or old Norwich Crests, Mules, Lizards, etc., for cash, small or large lots.—Taylor, 36, Aireville-rd., Frizinghall, Bradford.

WANTED, young Norwich Canaries, exchange bedding, table, and window plants.—W. E. Stephenson, Florist, Acomb, York.

WANTED, hen Canaries, any quantity, young or old, cheap for cash; must state price.—Edward Bruce, 121, Blackfriars-rd., Salford, Manchester.

WANTED birds, exchange tin containing about pint of mealworms and beetles.—Goodacre, Liquorpond-st., Boston.

WANTED, a few young Norwich or Yorkshire cocks, must be healthy.—Address, Hunt, Barley Mow, Dover, Kent.

NINE second-hand Border Fancy show cages, thoroughly good condition.—Border Fancy Aviaries, 91, George-st., Altrincham.

WANTED, cage fronts, give yellow marked Norwich hen, valued 4/6, no rubbish wanted.—Greenwood, 7, Byerden-lane, Burnley.

WANTED, air gun, nests young Thrushes, exchange Whippet bitch and £1 1/- cricket bat, Frowd's patent; approval.—Dearsley, 332, St. Leonard-rd., Poplar.

WANTED, two Budgerigar hens, exchange house moulted Bullfinch hen, also cock and hen, large birds, caged seven months.—Jackson, 160, Hospital-st., Nantwich.

WANTED, all kinds of Canaries and Mules, in full song, also British birds for cash; send lowest prices to A. Leitch, East End Bird Mart, 469, Gallowgate, Glasgow.

WANTED, quotations from exporters on birds delivered alive and well in Montreal. Birds to be met at steamer and duty paid by purchaser.—Montreal Bird Co., 245a, Bleury-st., Montreal, Canada.

WANTED, cash offers three pairs of Norwich Canaries and breeding cages, in breeding condition, 10/- a pair; Greenfinch cock and hen Canary and breeding cage, 5/-; a pair of Doves, 1/6; two Brambles, 2/-.—Long, 13, Prout-rd., Clapton.

SALE OR EXCHANGE.

Mainly British
To be Sold or Exchanged

MULES, 12, some singing, Goldfinch and Linnet, 30/-; or exchange.—Pearson, Greenwich.

1905 COCK Goldfinch, bred Mules last year, in full song, 6/-.—H. Roberts, Eirianfa, Conway.

EXHIBITORS.—Magnificent Bramblefinch, make champion, sell or exchange for first-class Foreigners.—F. Howe, Cambridge-st., Wellingborough.

BEAUTIFUL cock Bullfinch, also Redpoll, 6/6, exchange Foreigners.—Carter, 6, Portland-st., Lincoln.

TALKING Magpie, 8/6; three moulted Chaffinches, 6/-; exchange Linnets, Goldfinches.—James, 201, Chester-rd., Hulme, Manchester.

TWO splendid Song Thrushes, 3/- each, or offers Goldfinch, Linnet, or 1907 Canaries.—73, Lumley-rd., Horley, Surrey.

EXCHANGE for pair 1906 Norwich, two hand-reared Bullies, three Canary-reared Linnets, on seed, cock Greenie.—Lawrence, Chestnut-rd., Horley.

Advertisements continued on page 576.

Foreign Bird Queries continued from p. 572.

What Parrot?

Head, brown; back, wings and tail, green; breast, green in centre, sides orange yellow; short tail. About the size of a small pigeon. Is it a talking Parrot, and what is it worth?—K.D.F.

K.D.F.—It is a Senegal Parrot (*Pœocephalus senegalus*). It does not bear much of a reputation as a talker, and is rather difficult to tame. Its value is about 20s.; of course, more when acclimatised. However, it must have its due, and I have heard of several individuals that spoke a few words very distinctly, and I have handled very tame specimens that would let almost anyone (even strangers) handle them as they pleased. Such birds, of course, were valuable, had been carefully trained, and given a good bit of liberty, and generally been fussed about with a lot before such a happy state of affairs came about. Diet: Canary, oats, and wheat; two parts of canary and one part each of the two latter; ripe fruit, cuttlefish, grit, greenfood, plain biscuit, nuts, and water for drinking and bathing.

Breeding Blue-wing Lovebirds.

I have put a pair of these birds with my Budgerigars; will they breed? They have finished moulting, and are now in splendid condition. Please advise me how to treat?—C. JONES.

C. Jones.—Blue-wing Lovebirds, or more correctly, Passerine Parrakeets, are not by any means free breeders in captivity, and but few instances are on record of their having done so; however, one of these records is that they bred in quite a small cage, so there is at least a probability that you may succeed. Re your Budgerigars, I am assuming you have only one pair; if this is the case, possibly this is the reason, as it frequently happens that a single pair will take some period to settle down to breed, while where there are a number together they frequently do so at once, one pair apparently stimulating the other. However, it is only the case of exercising a little patience, and now they are in condition will undoubtedly soon settle down to reproduce their kind. Keep them well supplied with grass in flower. Your diet is satisfactory.

Pintail Nonpariels.

I have a pair in a box cage, but intend putting them in my Crystal Palace aviary. Is my diet correct? Please give full treatment, where they come from, etc.—J.C.

J.C.—These exquisite birds are natives of S. Tenasserin, Sumatra, Java, the Malayan Peninsula, and Borneo. They are very delicate when first imported, and the majority have but a very short life in captivity. In addition to the diet you are giving them, I should give spray millet, a little grass seed, grass in the ear, white oats, and a small saucer of crushed Osborne biscuits, crumbled sponge cake, dried flies, and best ants' cocoons in equal parts; make crumbly moist for use. A small turf would also be very helpful for them to pick over, so also would such green fly (that is, sprays of foliage—non-poisonous—infested with same), small spiders, living ants' cocoons, and any small insects and flies you could procure. I should certainly advise their being kept in the box cage, which is more suitable for birds than an all-wire C.P. aviary, which is really (though very eyeable) one of the most unsuitable of cages, as unless very carefully placed, its inmates are subjected to draught, which the hardiest of birds cannot stand.

Parrot Finches.

Are Parrot Finches difficult to keep in condition? Are they suitable for show? What is their food, treatment, and value?—L.C.

L.C.—This is one of the most handsome of Foreign Finches, being very brilliantly clad, having the head, throat, rump and tail bright scarlet, and the remainder of the body bright grass green. They are not difficult to keep in condition once they have got over the hardships of the voyage to this country. They are among the most suitable of Finches for the show bench, and a pair in fine and sleek condition would be almost sure to catch the judge's eye. Diet; Canary, white and spray millet, oats, grass in flower, and other green food, cuttlefish, rock salt, grit, and a regular supply of water for drinking and bathing. A roomy box cage is the best type to keep them in. They are uncommon on the market, and owing to their rarity command a high figure; they are being advertised at the present time at 70/- a pair. An acclimatised pair would fetch half as much again.

Parrot Out of Condition.

The bird is getting quite bald, is very mopy, and looks a miserable object. Is my diet correct? Shall be most thankful if you will tell me how I can get it into condition.—CRACK.

Crack.—Diet your bird as follows: Canary and oats, two parts each, and one part each of hemp, wheat, dari, and sunflower seeds; well mix, and always keep a supply in the cage. Give in addition ripe fruit, plain biscuit, nuts, green food, and a stale crust of household bread. Offer water to quench its thirst three times daily. Instead of offering the boiled maize separately, give it on the top of its seed mixture, and thus you will induce it to take the same. Mix a teaspoonful of flour or flowers of sulphur among the boiled maize for a short period, also give direct to the mouth (most Parrots will readily suck it from a quill) 8 drops of pure salad oil. Well colour its drinking water with Parrish's Chemical Food, and if it will not drink I should make the practice, for a time at least, of giving it a teaspoonful direct to the mouth three times a day. The bird will either begin to improve or it will not live much longer; it has got into a very bad condition, but as it is still eating freely there is certainly hope that it will improve, but it will

certainly be some time before it is in condition again as to plumage. If the skin is dry or scaly, rub in a little clean vaseline. You had better report progress a little later.

What Parrot?

I have a small Parrot, mostly green, white beak; its head is plum-plush, shaded blue; it is about the size of a Thrush. Is it worth keeping, and will it talk? Is it a young or old one?—T.G.

T.G.—It is a young Blossom-headed, sometimes called Plum-headed Parrakeet (*Palæornis cyanocephala*). It is a freely imported bird, and at times is to be purchased at a very cheap rate. At the same time, it is a handsome and engaging little bird, and not unduly noisy for a Parrakeet. It cannot by any means be classed as a talker, but if the necessary patience be expended upon them, there are very few species of Parrakeets that will not learn to say a word or two, and I have heard of individuals of this species doing so. I have always kept them in the outdoor aviary, so my specimens never received any tuition. They are worth keeping for their beauty alone, and properly tamed should make an engaging little pet; but if you want a fairly fluent talking bird, I am afraid you will come to a different conclusion. If you elect to keep it, stand its cage where it will hear plenty of conversation, and talk to it freely, and it will probably soon pick up a word or two, as well as many droll tricks and antics.

Budgerigars Killing Young.

I have three pairs of Budgerigars; one bird hatched out four, reared them up to three weeks old, when they were thrown out of the nest. They were strong at this age, but not able to feed themselves. (2) Another sat on six eggs, about the usual period, then they were thrown out. (3) Now, another bird has laid two eggs. I looked each day to see if there were any additions, and now these are also thrown out. What can I do? —AIGBURTH.

Aigburth.—(1, 2, 3) In all these cases it appears to me you have been too curious, and though Budgerigars will stand a good bit of interference with their nesting arrangements, very few birds (not all Canaries even) will stand their nests being unhung and examined daily. There are other things, too, which leave me in much doubt—have you space for three pairs? Do mice interfere with the birds by entering their husks? In one or two instances I have had similar things happen, but only with birds which were very young or not in condition. If you can supply me with a little more data, size of cage, etc., and say if troubled with mice to any extent, I may be able to reach a definite conclusion. As it is, all I can say is, try again, and don't pry into the husks this time. And if you are not overcrowded, and the same thing occurs again, well, the only thing I can advise is to clear the whole lot out and get in a fresh lot, from an entirely different source to which these came from. However, if you will minutely describe your arrangements, I can possibly suggest a remedy. Note replies to other querists. Occasionally bad feeders and unnatural parents turn up, but this is very unusual with Budgerigars.

Green Parrakeet Dying.

I have just lost a Parrakeet. Its breath became very bad, and its appetite gradually got smaller. It was fed on Parrot mixture, ripe fruit, and bread soaked in water. I have a Grey Parrot very loose in the howels; what is the remedy?—GREEN PARROQUET.

Green Parroquet.—I am of the opinion your Green Parrakeet succumbed to a bad attack of pneumonia, brought on by a severe chill. You do not say how you are feeding the Grey, but the correct diet is given in reply to another querist in this issue, to which I must refer you. For the looseness, give 5 drops of pure salad oil direct to the mouth. Take away the drinking water, and when you think the bird has become thirsty, take two tablespoonfuls of water, 2 drops of laudanum, and a pinch of prepared chalk, stir well up together, and give the bird to drink; any that the bird leaves may be offered again in, say, two hours' time, but it must be freshly stirred up just before offering to the bird. Follow this by a course of Parrish's Chemical Food, well colouring the drinking water with same.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary (L.B.A.H.).—Bird fever. There is no cure for any fever. Isolation and disinfection are the means of stamping it out.

Parrot (W. Beaver).—Chronic liver disease with recent pneumonia. Receipt of unstamped letter cost 2d.

Linnet (A. Hallus).—Chronic enlargement of liver, feverishness, and inflammation of lungs. Larger cages and fresh seeding plants, such as shepherd's purse and charlock, are suggested.

Goldfinch (A. S. Robinson).—Septic inflammation of liver, lungs, and bowels, ending with apoplexy. I consider this bird must have lived in an infected place, either in your cage or (if you have not had it a month) with its previous owner. You must disinfect the cage it lived in before trying another bird.

Canary (J. H. Cawood).—Inflammation and ulceration of lungs probably of an infectious nature. There is no cure. Isolation of any healthy birds might save them, and all their surroundings should be disinfected with burning sulphur. All cages and appliances should be washed with boric acid solution of the strength of one teaspoonful to a pint.

Waxbill and Bengalese (B.G.W.).—Former died of "general chill" and feverishness, with probable loss of appetite. Latter of enlargement of the liver, feverishness, and pneumonia. The entanglement on legs and feet of nesting material and excreta should have been removed. Canary chick quite as likely starved through "taking a chill" as through neglect of parents.

GENERAL.

Answered by the EDITOR.

"Bird World" (E.M.F.).—We can supply you with the numbers you require for 1s. 4d., post free.

Cape Town Show (A.R.).—Many thanks for your kindly thought on our behalf, but the matter had already been dealt with. Nevertheless, your kindness is most heartily appreciated.

Pigeon Found (A. E. Howland).—If you write to the editor of "The Racing Pigeon," 19, Doughty-st., Loudon, W.C., he will insert the announcement for you. We do not deal with such matters.

Java Sparrows (H. Thomas).—Java Sparrows may be bought at a low figure—somewhere about 3s. or 4s. per pair. Consult our advertisement columns, under Foreign Birds.

SINGING CONTESTS.

The promoters of any bird singing club desirous of offering a "Cage Birds'" special prize for competition amongst their members should communicate with the Editor "Cage Birds," 154, Fleet Street, London, giving full name and address of club and number of members.

LEEDS.

The usual week-end contest at the Skinners' Arms, Buslingthorpe. Eleven birds competed. Some good singing was heard, and everyone was satisfied. 1, Clark; 2, Galley; 3, Rced.—F. RAPER, Sec.

BLACKBURN.

Lark Singing Contest held at the Crown Hotel, June 22nd. There were 14 entries; 10 minutes banging:—Hunt, 9 min. 48 sec.; R. Sheffield, 9 min. 44 sec.; J. Sheffield, 8 min. 59 sec.; Knowles, 8 min. 45 sec.; Airey, 8 min. 44 sec. Next contest Good Samaritan Inn, Grimshaw Park (members only), June 29th. The first bird to be bung at 2 o'clock.—J. SHEFFIELD.

The Blackburn L.S.A. held an All England Contest for quality on June 22nd, at the Vauxhall inn, Witton, Blackburn. Thirty-five birds competed for six valuable prizes given by Mr. Fred Howson. The singing was of the highest quality. 1, Bentley; 2, 4, Mills; 3, Gopping; 5, Leeming; 6, Barnes. The judges were J. Dobson, J. Jones, W. H. Topping; timekeeper, J. Fender.—R. HAYHURST, Sec.

SHEFFIELD.

A Linnet contest took place at the Don Inn, Carbrook, on June 23rd. Fifteen birds were hung, and some good singing was heard. 1, 3, Brown; 2, Wilson. Judges, J. and W. Blackadder.

On June 23rd, at the Bird-in-Hand, Broughton Lane, Attercliffe, 30 birds sung before a crowded house, for five prizes. Owing to the large entry the birds were restricted to 2 minutes hanging. Biggin, 55; Watson, 45; Fowlstone, 44; Soldier Jack, 37; Robinson, 34. Judges, Messrs. Bollington and Headford. After the contest the landlord was approached with the idea of forming a Linnet Club, and the result was a meeting at night, at which 13 members were enrolled.—FREDK. WATSON.

Sir,—In reply to the letter signed Fredk. Watson, I should like it known that this report is false. Fred. Watson and his friends, including prizewinners and judge at the Old Britannia Contest, reported in same paper, made no complaint when they were taking the prizes between them, but as soon as others have their birds in good condition they blame the organisers of the club. I take this as a personal affair, knowing what they have done, but hope the club they are about to form will be carried on in a better spirit than they seem to possess. —J. J. BLACKANDER.

CARLISLE.

There was a large company present to witness a Linnet Singing Coutcst on June 15th, at the Wool Pack Inn, Carlisle. There was a record entry of 53 birds, and some good singing. 1, Thomlinson; 2, Shearman; Thomlinson and Jackson tied for third. Mr. Hill was judge and Mr. Thorburn timekeeper.

ACCRINGTON.

A Lark Singing Contest took place at the Hargreaves Arms Hotel, on June 22nd. Sixteen birds competed for six prizes. 1, Hargreaves, 8 min. 39 sec.; 2, Sanderson, 7 min. 59 sec.; 3, Jackson, 7 min. 37 sec.; 4, Berry, 6 min. 47 sec.; 5, Greenwood, 6 min. 30 sec; 6, Berry, 6 min. 30 sec. Timers, Henry Greenhalgh and James Sborrocks.—ALF. KNOWLES, Sec.

DURHAM.

A Linnet contest took place at the Black Horse Inn on June 22nd. There were thirty-one entries, and the singing was splendid, giving the judge a lot to do to decide which was best. 1st, 2nd, Cole, who sold one of his birds to the judge for 15s.; 3rd, Million. Mr. Sharpe acted as judge, and Mr. McLinden was timekeeper, and they gave general satisfaction.

THE SHOWS.

WESTERN COUNTIES O.S.

Second Nest Feather Show, held June 19th, at the Oddfellows' Hall, Union-street, Plymouth. An entry of 150 was received, which far surpasses any other show of the same kind previously held by the society. The quality of the birds exhibited, especially in the Crest and Norwich classes, gives strong evidence that the W.C.O.S. will not be behind in keen competition this coming show season. Mr. R. B. Tope judged Norwich, Crest, Mules, and Cinnamons, and Mr. A. E. Cheney the remainder, the awards being generally received with satisfaction. YORKS. YELL. (7): 1, 2, Dyer, the former heavily varieg., the latter a cl.; 3, Perrin, tkd.; 4, vhc, Bassett, cl. BUFF (13): 1, 4, Dyer, heavily varieg. and cl.; 2, Large, cl.; 3, Perrin, cap mkd.; vhc, Bassett; hc, c, Hamilton. NOR. YELL. (12): 1, Spillman, cap mkd. yell., exceptional size, one of the best; 2, 4, Blatchford, wing mkd. and cl.; 3, Baker, cl.; vhc, hc, Garland; c, Small. BUFF (16): 1, 2, c, Spillman, former a clear, grand colour, but many thought should have given place to second, a cap mark only losing to winner in colour; 3, Baker, very nice clear; 4, Blatchford; vhc, Dodd; hc, Deeble. CREST (10): 1, Hobbs, varieg., shapely Crest; 2, hc, French, heavily varieg.; 3, c, Ryder, cl., body dk; 4, vhc, Northcott, lightly mkd. CRESTBRED (12): 1, hc, Haskell, green, exceptional size; 2, 4, Ryder, heavily varieg. and green; 3, vhc, Hobbs, clear buff; c, French. CINN. (2): 1, 2, Pope. MULE, DARK (7): 1, 3, Rapson, two Gold.-Canaries; 2, 4, Browning, two Greenfinch-Linnets. BRIT. GOLD OR BULLFINCH (13): 1, hc, Snell, cage moulted Bullfinch; 2, Browning, real good Goldfinch; 3, Rapson, Goldfinch; 4, Blatchford, Goldfinch; vhc, Camp; c, Small. LINNET, ETC. (11): 1, Pridbam, Linnet, a good win; 2, Browning, Linnet; 3, 4, hc, Camp, Linnets; vhc, Wills; c, Snell. A.O.V. (12): 1, 2, 3, Snell, two former Chaffinches, third Yellow Bunting, a good team, in pink of condition; 4, Camp, Cirl Bunting; vhc, Pope; hc, Browning; c, Elson. INSECTIV. (1): 1, Tremlett, Thrush. FOR. (LARGE) (2): 1, Jarratt, Indian Rock (green); 2, Tremlett, King Parrot, looking somewhat dull, or would have won. SMALL (4): 1, Jarratt, Shama, well-known winner; 2, Browning, Goldfinch; 3, 4, Snell; vhc, hc, Tremlett. SELL., 15s. (1): 1, Harvey. A.V. CAN. (NON-MEMBERS) (6): 1, 2, 3, 4, Woodley, nice team of Crestbreds; vhc, hc, Marten. MULE (4): 1, 3, Watson, light Gold.-Canary; 2, E. Pope, dark Linnet; 4, Hayne. BRIT. (12): 1, Cooper, Blackbird; 2, 3, White, Robin and Goldfinch; 4, Snell, Bullfinch; vhc, Teake; hc, Allen; c, Jenkins. FOR. (2): 1, Rickard, Grey Parrot; 2, Cooper, Cardinal.

S.W. LONDON.

The South West London C.B.S. Young Bird Show was held on June 22nd, and was the best that this society has ever held, both in number and quality of exhibits. A large number of visitors put in an appearance. Considering that this has been a most unfortunate breeding season for most of the members, it was the more gratifying to be able to get so fine a collection of young birds together so early in the season. The Norwich and Yorkshire men in each section may congratulate themselves on being able to produce such good specimens, many being of great merit, and if well moulted will be able to give a good account of themselves in the autumn. Mr. J. Robson judged. CHAMPION, BUFF NOR.: 1, 3, Wheeler; 2, Harris. YELL. NOR.: 1, 2, 3, Wheeler. MKD.: 1, 2, Berkshire; 3, Harris. YORKS. BUFF: 1, 2, 3, Wheeler. YELL.: 1, 2, Wheeler; 3, Best. LONDON CAGE BIRD ASSOC.

The Annual Young Bird Show was held on Saturday last, June 22nd, at the "Napier," High Holborn, W.C. An excellent all round lot of birds put in an appearance, and the venture must be voted a success in every sense of the term. The room is a very comfortable and convenient one for a small show of this kind, and it was well-filled with Metropolitan fanciers during the afternoon and evening, several friends from the country also putting in an appearance. The Open Yorkshire classes were very strong, and if the quality therein affords any criterion to the merit of the lengthy ones bred in the south this season, then we should see some keen struggles when the shows come round. Mr. Crisp won in the clear or ticked class with a grand youngster, caught in the pink of condition. Next best we liked the buff staged by Mr. Knight, which only managed to get vhc, but which several connoisseurs present thought could have won outright. It should make up a clinker. In the markeds, Mr. Daintry stood 1st and 2nd with two very smart birds. Mr. Rennie held a very strong hand in the Norwich, securing the premier award with a beauty, which, however, was pressed closely by the second, a most promising bird staged by Messrs. Cooper Bros. Mr. V. Wynn had out one or two nice Lizards, while Mr. Tyson "cut his teeth" as an exhibitor of Border Fancies. In the amateur section the principal winners were Messrs. A. W. Hart (Norwich), A. Lazarus (Crests), and C. W. Baker and J. Carson (Yorks.) There were one or two real good specimens among the leaders. In the novice section Mrs. Litchfield scored with Norwich, Mr. G. H. Neal coming a good second. Mrs. E. Litchfield and Messrs. R. Blackburn, J. Franz and Mugford were the chief winners with Crests and Crestbreds. The Yorks. section was remarkable for the double victory of Mr. G. B. Lewis, who took the firsts in both classes, being followed by Messrs. F. Smith and H. Trussler. The competition was very keen indeed amongst the novices, and in this section we saw a bird we liked as well as anything in the show. This was the young heavily variegated Crestbred cock, some five weeks old, which won for Mr. Franz. For substance and feather this "baby" would want a deal of beating, while its width of skull and pronounced lashing delighted us all. There should be a future before this youngster, given good luck. A few Hybrids and British lent agreeable variety to the show, Messrs. Franz, C. H. Cooper, and Wynn being the principal winners therein, the last-named gentleman being fortunate enough to win with a Cirl Bunting a first prize in a Softbill class. Mr. J. Tyson had charge of the arrangements, in the regrettable absence of the popular hon. sec., Mr. T. A. Wade, who is unfortunately down with illness, and he carried everything through in his usual able fashion. In Messrs. Daintry, Franz, Crisp, and others he found willing helpers. Mr. J. Robson made the awards.

CHAMPION NORWICH (19): 1, vhc, hc, Rennie; 2, 3, c, Cooper Bros. YORKS. (21): 1, 3, hc, Crisp; 2, Broome; vhc, Knight; c, Daintry. MARKED (7): 1, 2, Daintry; 3, Bennett; vhc, Winn. The entries of Mr. Easterling were all absent. A.O.V. (5): 1, 2, Wynn; 3, vhc, hc, Tyson. AMATEUR, NOR. (7): 1, 3, c, Hart; 2, vhc, hc, Baker. CREST (1): 1, Lazarus. C.B. (2): 1, 2, Lazarus. YORKS. CL. (5): 1, 2, 3, Baker; vhc, Carson. VGTD. (3): 1, Carson; abs., Best. NOVICE, NOR. (5): 1, Mrs. Litchfield; 2, 3, vhc, hc, Neal. CREST (8): 1, hc, Blackburn; 2, Mrs. Litchfield; 3, Franz; vhc, c, Offord. C.B. (6): 1, Franz; 2, hc, Mugford; 3, Mrs. Litchfield; vhc, c, Offord. YORKS. CL. (16): 1, Lewis; 2, c, Smith; 3, Pullinger; vhc, Lucas; hc, Trussler. MARK (9): 1, Lewis; 2, Trussler; 3, hc, c, Smith; vhc, Warley. HYB. (1): 1, Franz. BRIT. HARD (8): 1, 2, 3, vhc, Cooper; hc, Warley. SOFT (1): 1, Wynn. Mr. Dewhurst's birds were all absent.

LONDON AND PROVINCIAL O.S.

The L. and P.O.S. held an interesting Nest Feather Show on Thursday evening, June 20th. Considering it was a night show only, the number of young birds present, viz., 48, must be accounted fairly satisfactory, though there was a decrease from last year's total, for which many thought the bad breeding season responsible. Taken on the whole the quality was excellent, some birds well worth looking at being found in both champion and novice sections. The room was well-filled with visitors, amongst those whom we noticed present being Messrs. Crabb, Crisp, Ramsden, Dobson, Tyson, Graves, Hodder, Easterling, Cooper Bros., Tringham, Mortlock, Day, Dring, Welch, Lathleiff, Lazarus, Morton, Greenway, Picard, Rudman, Mather, J. and H. Findlay, Norris, Munday, Johnson, Moore, Hazell, Martin, Woolhouse, Hodson, Pretty, Connorton, Key, Herbert, etc. The silver medal for best bird in champion section went to Messrs. Cooper Bros., their yellow Norwich, a very fine youngster, doing the trick. The medal for second best fell to Mr. H. K. Picard's Yorks. The medal for best in the novice section went to Mr. H. Welch's buff Norwich, a shapely bird of nice quality; that for second best was secured by Mr. J. A. Simpson. Mr. T. Heath officiated as judge with his usual ability.

Coming to the birds themselves, which were well staged in the room at headquarters (the "Raglan," Aldersgate Street, E.C.), we have already commented on Messrs. Cooper Bros. winning exhibit, and Mr. Dring's second is also a promising baby, a little less chubby than the leader, but likely to make up well. Mr. Hodder's two winning Buffs are typical, well cut up youngsters, just beaten by condition for the special. Mr. Picard staged a trio of excellent yellow Yorks., which ran away with the leading awards. Mr. Tringham was equally successful in buffs (besides staging a nice green), and these two exhibitors' teams will have to be reckoned with later on. In the Novice section, Mr. Welch again put down a few typical Norwich, winning first and second in both yellows and buffs. This fancier seems to have acquired the knack of turning out good youngsters. Mr. Simpson's three winners in the yellow and buff Yorks were a nice trio, good in length and shape, while Mr. Richardson's second prize buff was likewise a very creditable specimen. Mr. Lazarus won with a promising Crest and Crestbred, and Mr. Rudman got a second with a Cinnamon, a variety not often staged at metropolitan young bird shows. Mr. Lambert Brown made light of the managerial duties, and with Messrs. Day, Tringham, and others lending a hand, the venture went through without a hitch.

CHAMPION NORWICH YELL. (4): 1, Cooper Bros.; 2, G. H. Dring; vhc, J. Hodder. BUFF (4): 1, 2, Hodder. YORKS. YELL. (8): 1, 2, 3, H. K. Picard. BUFF (6): 1, 2, vhc, H. E. Tringham. A.O.V.: 1, Tringham (Green). NOVICE, NOR. YELL. (6): 1, 2, H. Welch; vhc, L. J. Richardson. BUFF (6): 1, 2, Welch; vhc, Richardson; hc, G. Munday. YORKS. YELL. (4): 1, 2, vhc, J. A. Simpson. BUFF (5): 1, hc, Simpson; 2, Richardson. CRESTS: 1, A. Lazarus. A.O.V. (3): 1, vhc, Lazarus (Green C.B.); 2, P. Rudman (Cinnamon).

BEGINNERS: READ THE ANNUAL.

STOCKPORT.

This show was held at the Boar's Head Hotel, on June 11th and 12th. Entries were not as numerous as on previous occasions, but the quality was grand throughout the show. Mr. Battye, of Huddersfield, judged in his usual painstaking manner. The room is an ideal one for such a purpose, being absolutely the best in the town. The championship cup has been withheld for a short time, owing to a difference of opinion. Championship cup, Massey; Amateur cup, Hill; Novice cup, Booth; British, Hill; specials for best birds were won by Messrs. Slater, Shore, Hill, Higham, Boswell, Baker, Booth, Dickenson, and Hall; points specials, Messrs. Garner, Massey, Slater, Shore, Stafford, Gaskill, Higham, Hill, Oldham, Baker, Booth, Boswell, Nelson. CHAMPION COPPY (2): 1, 2, Garner. PLHD. BUFF (2): 1, 2, Garner. LIZARD GOLD (5): 1, Garner; 2, vhc, Massey; 3, 4, Harrison. SILVER (2) 1, 2, Massey. YORKS., YELL. (7): 1, 4, hc, Slater; 2, 3, Potts; vhc, Gaskill. BUFF (8): 1, 2, vhc, hc, c, Slater; 3, 4, Potts. EAST BOWLING.

The East Bowling and District B.F.A. held their show for Canaries in their first feather at the Barley Mow, East Bowling, on June 22nd. The entry was a very good one, and some very promising young birds were staged. Mr. C. Stebbings officiated as judge, and gave every satisfaction. The points count for gold medals and other prizes that are put up for competition at their shows this year, and the awards to-day are as follows:—YELL. YORKS. (8): 1, Varley; 2, Bottomley; 3, Crowther; 4, Cowell; vhc, Varley; hc, Clark; c, Bywater. BUFF (11): 1, Blezard; 2, Casey; 3, Hudson; 4, Clark; vhc, Lambert; hc, Firth; c, Cowell. TKD., ETC., YELL. (6): 1, Hudson; 2, Warburton; 3, Varley; 4, Lambert; vhc, Bottomley; hc, Firth. BUFF (8): 1, Blezard; 2, 4, Bottomley; 3, vhc, Varley; hc, Firth; c, Casey. CINN. BUFF: 1, Bywater. FOUL MKD.: 1, Lambert. SELL. (9): 1, Sowden; 2, Cowell; 3, Hudson; 4, Thompson; vhc, Crowther; hc, Firth; c, Blezard. NOVICE YELL. (4): 1, Sowden; 2, 3, Palframan; 4, Gledhill. BUFF: 1, Sowden; 2, Gledhill.

WELSH NATIONAL C.B.S.

Meeting held June 18th. It was decided that at show on October 30th and 31st we give 70 classes with prize money, 35s. per class; entry fee, 2s. The following gentlemen have kindly consented to become Hon. President, F. Rocke, Esq., J.P.; Vice-Presideuts, Dysou B. Williams, Esq., Frank E. Tunbridge, Esq., Geo. Mayon, Esq., W. T. Farr, Esq.; G. H. Bevan, Esq. S. J. NICHOLAS, Hon. Sec.

BRADFORD AND COUNTY B.B. AND M.C.

Meeting June 22nd, which was well attended. Mr. W. A. Cowgill (president) occupied the chair. Mr. Cowgill said that it had been expressed by several gentlemen that exhibiting members should contribute something extra above those, who, to help forward the society, were willingly putting down their shillings but who took no active part in showing, and, therefore, could receive no benefits from membership. But no resolution was put to the meeting. Mr. Chitteuden said he would like to see representatives elected from outside the Bradford district. Eventually it was decided that the governing body should consist of president, secretary, four vice-presidents, and eightcen committee, two vice-presidents to be elected from Bradford district, and two outside and six committee men from Bradford district, and twelve outside. The definition of Bradford District to be six miles radius from Bradford Town Hall. It was thought this would give outside fanciers encouragement to join us, as we do not intend to confine our attention solely to this neighbourhood, but to extend our influence throughout the broad-acred shire, and as all the offices allotted to members outside the district are to be filled up at our next monthly meeting fanciers sending in their names for membership before July 20th will be eligible for election. It is our desire to get working for the winter shows, therefore we hope every fancier will join us, as the subscription is only nominal, namely, 1s. per year. A letter was read from the secretaries of the National British Bird and Mule Club, stating that they could not let us have a copy of rules until our request was laid before their committee. Therefore we could not go into the question of rules until we have the sanction of the parent body to frame our rules upon theirs. The next meeting was fixed for Saturday, July 20th, at the Market Tavern, Bradford. All fanciers interested are cordially invited. W. R. MYERS, Hon. Sec.
23, Ingleby-place, Bradford.

"THE STANDARD WORK."
HOUSE'S
CANARY MANUAL
Price ONE SHILLING. Post Free 1/2.
Superbly illustrated by the Champion Canary Artist Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL."
MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."
F. CARL, 154, Fleet St., London, E.C.

MOULTING AND FEEDING BRITISH BIRDS.

By H. SHORNEY.

A Paper read before the York Cage Bird Society on May 13th.

At the usual monthly meeting at All Saints' Church Rooms, North-street, there was a good company of members and friends. Mr. A. Richardson was in the chair, and he asked Mr. Shorney to give his promised paper on the above subject. On rising, Mr. Shorney said:—

If anyone asked me which I thought was the best way to moult British birds I should say without a doubt moult them in a small aviary if possible. But from an exhibitor's point of view this way is not always advisable, as it has its drawbacks; for instance, they get wilder than if they are moulted in a cage, and are more apt to break their tails and flights when caged off again, but if they are old birds that have been caged for a few years they will not be so bad.

We will now take a few of the Finches that are most commonly kept, and leave the Softbills to someone that has had more experience, as I have never stuck to them long enough to gain a lot of knowledge about them. First comes the Hawfinch. The best way to moult the Hawfinch, in my opinion, is to keep it in a moderately large cage and shaded from the sun (I will say nothing about colour food, as there is a great difference of opinion about it, and leave it to you to talk over at the end of this paper, but there is no doubt that it improves some of our British birds). The best seed to give the Hawfinch during the moult is sunflower, canary, rape, hemp, linseed, you can also buy hard peas after the green peas are done and soak them till they sprout, hawberries can be got through the winter, as they hang till the spring of the year; yewberries he is very fond of, also the pips of apples and the kernels of plum stones and cherry stones; a few mealworms are also relished.

The Bullfinch can be got as good a colour as in a wild state if anyone takes the trouble to cater well for him. He is best moulted in an aviary. Perhaps the legs will not be as white as if moulted indoors, but that can be looked over, so long as the body colour is well up. There are plenty of wild seeds which the Bullfinch is fond of, but to mention all the seeds would make this paper too long, so I will just deal with the berries. Blackberries are the chief food during the moult and can be got well on into winter. Anyone than can get into the country once a week can get a supply to last a week; if cut with plenty of stalk, carefully put in a basket, and then stuck in wet sand, they will keep a long time. Then follows the privet berries, which can be kept the same way, and can be got all the winter. I have seen them hang on the trees, never get touched by Bullfinches in their wild state, but they can be got to eat them in a cage, and they will undoubtedly improve the colour after the bird has moulted. Ling berries are also useful. Mountain ash berries, which come first, must be gathered as soon as they are ripe, as the other birds, such as Thrushes and Blackbirds, will soon clear the trees; they can be hung in the sun on a line and dried.

The Goldfinch, in my opinion, if moulted indoors comes out more clear in markings. I have always moulted mine outside, and might say that two which I moulted outside last year had white legs. The best food for the Goldfinch is the thistle, of which there is several varieties; the first one is ready very early, but is difficult to gather, as the seed falls out before the red flower is dead, but the later ones are well known, and can be gathered when they are just opening, then you are sure of getting good, ripe, sweet seed; they can be rubbed out or kept as they are if put in a narrow bag and well dried. The down need not be wasted, for anyone with a few Canaries will find that it makes very good nesting material. The swine thistle contains a lot of seed, which both Gold, Bull, and nearly all Finches will eat. They are often covered all up the stalk at the top with a kind of insect, that the Goldfinch is very fond of, and which improves the colour of the blaze. There are also hardheads, and some Goldfinches will eat the blackberry and privet, which they should be got to do if possible.

The Linnet is best moulted indoors, as if they are moulted in an aviary they will be found to be blurred on the breast, and not show the markings distinct. They are very fond of the hardhead, which is not at all easy to gather, as the seed falls out soon after it is ripe. If you gather them by chance you will find the biggest half dry up to nothing. It is infested by a beetle and grub, which seem to clear the seed all out. The Linnet will sometimes eat the privet berry and most of the other wild seed.

Thanking you all for your kind attention, I hope I have said sufficent to start off some of our younger members in the British bird hobby.

STRAY NOTES ABOUT BIRDS.

By CLAUDE ST. JOHN.

ACTIONS WHICH INDICATE (?) SEX.

The interpolated interrogatory in the title of this stray note is meant to form an integral part of the whole. For however certain one may be that a cock bird rests on his right leg and a hen on her left leg, one thing is infinitely more certain—viz., that birds in general will have to become exceedingly more consistent in these habits before the practical fancier is convinced of the fact. It is purely the tyro in bird fancying who is in that unenviable stage when sexual distinctions are so utterly bewildering and flabbergasting who is apt to be duped by these fantasies of a too vivid imagination. Thus the novice, when he meets a voluble vendor, ready with this valuable wrinkle, as it may be termed, would be well advised to smile a grateful appreciation and—pass by on the other side. Similarly, when he finds the fable trotted out that a cock Thrush sleeps with his head under his right wing and a hen Thrush with her head under her left wing, wait until the hours of slumber are past and hear the hoped-for cock sing. 'Twill be a more reliable test. Male Parrots, we are told, hold food in the right foot, whilst hens use the left foot for like purposes. The theory is doubtless as flimsy as the others, but in the cases where one is reduced to such crude speculation the knowledge of the sexual differences of Parrots may be said to be still in its tender infancy.

A DEDUCTIVE THEORY.

From Parrots to Canaries is a rather far cry. Yet both these classes of birds show a certain similar trait under given circumstances, that it may be just warrantable to deduce a theory respecting the former from premises obtained from the latter. Everybody who has had much experience of tame pet birds—Canaries in particular, and to a less extent nearly every British Finch—knows well the habit some birds have, especially during the spring and summer, of regurgitating half-digested food when being noticed or petted and offering it, as it were, as a bonne bouche to its admirers. These birds are, in my experience, invariably males. The bird simply follows its natural instinct to give titbits of food to those to whom he is attached, just as by nature he feeds his mate from his crop at these seasons. Many Parrots, when they become tame and sociable, act in a similar way, and bring up beakfuls of half-digested food with, apparently, precisely similar motives, to the disgust of their owners, who misinterpret these kindly attentions and imagine the birds are vomiting. Now, the question which naturally arises is—are these birds males? It might prove interesting to study these habits in a large number of individuals, and especially such species in which there are well-marked sexual distinctions, in order to ascertain whether the result gave colour to the theory.

SOME OTHER FALLACIES.

Writing just now of a bird sleeping with its head "under its wing" reminds one how difficult it is to avoid altogether the appearance of subscribing to erroneous fallacies. Of course, a bird never does sleep in such a ridiculous posture. It simply turns its beak a little backward and buries it snugly amongst the plumage where the feathers of its back and shoulders (to use utterly unscientific and popular language) meet together, and its head is really over, not under, the wing. To describe the position as sleeping with its head on its arm would be nearer the truth scientifically and popularly.

THE FLOATING YOLK.

Then there is the error about the position of the yolk of an egg, which to this day I have never seen any attempt to correct. On the other hand, many scientific works fall into and perpetuate the error. No matter whether it be an egg of a bird or fowl, we are told the object of turning it, either before or during incubation, is to prevent the yolk sinking to the bottom and clinging to the side. This, at least, is the substance of the explanation. As a matter of fact, the yolk is really the lightest part of the egg, and swims or floats, instead of sinking in the "white" portion. To prove the fact it is only necessary to break an egg into a cup, and see how quickly the yolk rises to the top and floats there. Or take a bird's egg with a thin white shell, through which the yolk is easily seen when held up to the light, and hold it up to a good light between the thumb and forefinger and see how readily the yolk floats up a little above the centre of the egg and retains its high position, no matter how the egg may be turned round and round. Turn it slowly, the yolk almost or quite retains its position; turn it a half-turn suddenly, and the yolk is turned to bottom, and is seen to slowly rise up to the top in a few seconds. Considering the number of eggs broken in culinary operations, it is not a little remarkable that this egg fallacy should ever have existed.

LEEDS.

The members and friends of the Prince Albert L.A. met as usual to compete for three prizes, given by Mr. J. R. Saynor, there being a good muster of friends and members to hear the birds sing. Eleven previous winning birds competed. Judges, H. Allen and S. Green; timekeeper, B. Jackson; 1st, 3rd, Chippendale; 2nd, Smith.—E. WOOD, Hon. Sec.

WILLINGTON QUAY & DIS. F.S.

Meeting to appoint officers and other business was gone through. Fanciers are coming forward for enrolment as members, and we kindly invite all fanciers to our meetings at 5, Palmer's-terrace, Willington Quay, at 7 o'clock, July 4th.
W. T. WINTER, Hon. Sec.

SANDIFORD'S COLOUR FOODS.

Amongst the vendors of colour foods the name of Sandiford has long held a high position, and, judging by the samples of this season's foods which have reached us from Preston, Mr. Sandiford intends keeping up the high reputation which he has attained as a purveyor of colour foods of the highest class. This season's samples of both tasteless and hot peppers, which Mr. Sandiford is sending out, are very rich, bright and deep in toue, and full of natural colouring matter. Although the season is yet very young, the Preston firm have already disposed of nearly five tons, the bulk of which has gone to some of our largest breeders and exhibitors. In past seasons hundreds of winners have been fed on the Royal colour feeds, and the fact that repeat orders have been received this season from such a number of breeders who have used Sandiford Royal Colour Feeds in the seasons which are gone, proves that the users of such have been well satisfied with the results attained. At the last Crystal Palace, Scottish National and Norwich Shows the successes achieved by the birds fed on Sandiford's Royal Feeds were as striking as they were numerous, and most glowing testimonials were received by Mr. Sandiford from the successful owners. Although the quantity of the best quality pimento pods on the market this year is not great, Mr. Sandiford states that he has secured sufficient to serve all his last season's customers and have some left for those who are wishful to secure a supply of the Royal Colour Feeds for the first time. Mr. Sandiford's advertisement in our last issue gives the names of many of our leading exhibitors to whom Mr. Sandiford has already despatched large quantities of this season's Royal Colour Feeds, and a glance through the names of such should convince our readers far better than anything we may write as to the colour-feeding value of the feeds sent out by the Preston house.

LEEDS.

A grand Linnet contest held at King's Head, Shannon-street, on June 22nd, when fourteen previous winners sung for three prizes, quality singing. Some very good singing was heard, to the satisfaction of all present. 1st, Hardcastle; 2nd, Clegg; 3rd, Summers. Also on the 23rd, when twenty-three of the best birds in Leeds competed for four prizes. 1st, Hardcastle; 2nd, Crowther; 3rd, Nicholls; 4th, Summers. Judges, J. Melia, G. Towers, and C. Cooper.—T. SUMMERS, Hon. Sec.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).

W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate.

J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.

W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.

GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. Thirty years' experience. Terms moderate.

J. BERTIE, 7, Mitchell-st., Nottingham, Judge of Canaries and Cage Birds; all classes; 30 years' practical experience.

W. A. COWGILL, 135, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over 25 years' practical experience. Terms moderate.

A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.

J. DOBSON, 14, East Road, London, N. Judge of Canaries and Cage Birds.

J. W. DRIVER, (Adult & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.

GEO. GARDNER, 11, Haverstock Road, London, N W. Judge of all kinds of Cage Birds.

C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow. Judge of Canaries, Mules, British and Foreign Birds.

E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds (all varieties). Life experience.

F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees, Mules, British and Foreign, a Speciality. 17 years exhibitor. Terms moderate.

W. R. MILES, The Aviaries, Chichester, Judge of Canaries and Cage Birds. Life experience.

W. MUNDELL, 6, Carlisle Place, Bradford. Judge of Canaries and Cage Birds.

J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds. Author of "The Common Sense of Canary Rearing."

J. PATTERSON, Chirnside. Judge of Cage Birds All varieties. Wide practical experience. Specialist Border Fancy Judge.

J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.

PARKER ROBINSON, N.B.B. & M. Club, 1, Back Hartington Street South, Barrow-in-Furness. Cage Birds, all Varieties.

J. H. ROE, 167, Clarence Rd., Derby. Judge of Canaries and Cage Birds. Twenty years' practical experience.

WILLIAM J. ROSS, 19, Haulgh Road, Inverness, N.B. Judge of Pigeons, Canaries and Cage Birds. All varieties. Life experience.

C. E. SILK, The Aviaries, Emsworth, Hants. Judge of Canaries and all Cage Birds. Life experience.

HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.

R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.

J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of Canaries and Cage Birds. 25 years Breeder and Exhibitor leading shows.

J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. Thirty years' experience.

WEST STANLEY (DURHAM) OPEN SHOW — Poultry, — Pigeons, Rabbits, and Cage Birds. **November 30th, 1907.**

BEGINNERS: You MUST read the **ANNUAL**

OBITUARY.

Mrs. GILBERT GRAY.

Mr. Thomas Smith writes:—"It is with profound regret I have to announce that the highly-esteemed President of the Southern Albert Ornithological Association, Glasgow, has sustained a very severe loss in the decease of his beloved wife, on the 21st inst. She will be sorely missed by Mr. Gray and his son, and your readers will, I am sure, join with me in conveying to them heart-felt sympathy in their severe bereavement. May the consolations of our Heavenly Father abound to them in all fullness."

The Cambridge Monster Show will be held, as usual, on August Bank Holiday. Mr. Jacob Mackley will judge.

Stockton C.B.S. First Feather Show will be held July 4th. Mr. Hill, of Thornaby, will judge.—J. W. LOWES.

The Welsh National C.B.S. First Feather Show will be held at Mansel's Arms Hotel, Swansea, on July 11th.

The South and North Shields First Feather Show will be held on July 17th. and not the 10th, as announced in our list of fixtures last week.

Owing to the large number of letters received, in answer to my advertisement re Goldfinch and Canary exchange, I find it impossible to answer all.—W. WHITE, Cowes.

The Cheltenham C.B.S. First Feather Show will be held to-day (Saturday) at the Sydney Arms Hotel. Fanciers will be heartily welcomed by Mr. Treasure and his committee.

Kindly send me a copy of CAGE BIRDS ANNUAL and post cards, as advertised in your valuable paper, as I am taking up the hobby through your paper being so interesting.—JAS. HULTON (Middleton).

We are pleased to hear from Mr. Pressley (Hon. Sec. of the Creswell C.B.F.S.) that things are improving in connection with the society, and that they intend holding a First Feather Show on July 6th.

It may be interesting to your readers to know that I have succeeded in rearing a young Hybrid from cock Bullfinch and hen Greenfinch. The young bird is a month old.—T. JOHNSON (Southport).

The postponed ramble to Addingham of the Bradford West C.B.A. will take place on June 29th. Meet at the Midland Station at 1.50 p.m.; all fanciers who wish to go will be heartily welcome.—T. CLEGG, Hon. Sec.

At a meeting of the Dalkeith and Dis. C.C., held on June 1st, the following gentlemen were nominated as judges, and have accepted:—Messrs. H. Bennet, Borders; David Brown, Scotch Fancies; and J. Mason, Norwich, British and Mules.—THOMAS BRIGGS, Sec.

Mr. Clements, of Birmingham, is having a good season with his birds, having only lost two out of 26 hatched from six pairs—thus writes Mrs. Clements. What a happy man Mr. Clements should be to have a wife deeply interested in his hobby!

At the Innerleithen Show, to be held December 7th, Mr. J. Alexander, Lilliesleaf, has been engaged to judge the Bonder Fancy section, and Mr. A. Hay, Berwick-on-Tweed, the remainder. This year the radius is extended to the districts of Biggar and Upper Ward of Lanarkshire.

Mr. J. P. Cushion, of Reedham, in ordering a copy of CAGE BIRDS ANNUAL, says:—It will be so much better to turn to the "Annual" than to have to look up back numbers, which I often do for instruction. I have been following Mr. Bancroft's advice, and am glad to say I am having good luck with Canaries, and am now trying for Goldfinch Mules.

Very few fanciers are having much luck with young birds this season. Those who are fortunate enough to rear a few until pecking alone should put Tussiline in their drinking water. It will save them from inflammation, which carries off so many. Tussiline is specially prepared for Canaries by Mr. Palmer, chemist, Gamlingay, and is the best-known preventive of inflammation. Sold in bottles, 7d., 1s., 2s., post free.—ADVT.

Southern Yorkshire Canary Club

Will the show committees soliciting the above club's patronage and support make application for such to me by June 30th? The committee are meeting shortly after to allot the patronage. In the novice section a teapot, value £1 1s., is presented at each show for the member making most points, providing there are four competitors of the club, and no member to win more than one. I shall be pleased to hear from anyone wishing to join, or to furnish any information respecting the club.—J. W. RENNIE (the Royal Hotel, Mile End Road, London), Hon. Sec.

The L.C.B.A. Show.

At the close of the show, writes Mr. J. Tyson, the President presented the prizes to the successful exhibitors in his usual affable manner, and alluded in feeling terms to Mr. T. Wade's serious illness. A telegram from Mr. Burn (Chairman of the City and Suburban), announcing the serious illness of his wife, was also suitably alluded to, and the speedy and complete recovery of both invalids desired. The entries totalled 132, or six in excess of last year's numbers; and altogether this must be classed as one of our most successful exhibitions. At least four nominations for membership were received. Messrs. Cooper Bros. honourably returned their prize-money to the funds of the Association, owing to their inadvertently placing the gummed cage labels on the right side of drinker, instead of the left, as was requested. The show was exceedingly well attended by a large number of fanciers and friends.

Eccles First Feather Show will be held on July 6th. Mr. W. A. Bladon will judge.

In the report about Rule 17 of the C.B.U. it says Southport and Dis. C.B.S. voted against the rule. This is a mistake. We voted for it, so writes E. Riley.

Exhibitors who desire to get that extra gloss or sheen on their birds must colour-feed on Ramsden's pure peppers. It is being used this season by hundreds of noted exhibitors, willing to pay a fair price for what they know to be a good article. Ramsden's peppers are the best obtainable, and their absolute purity is guaranteed by a warranty always worth twenty shillings in the pound.—ADVT.

Most varied in its arrangement of meetings of an interesting and instructive character is the syllabus of the Hastings United C.B.S. for 1907-8. The officers are a strong and representative body, and the Hon. Secs. are those enthusiastic lovers of the Yorkshire, Messrs. A. E. and J. H. Godden, of Ceylon House, Earl Street, Hastings, who will be pleased to give information concerning the society to anyone requiring the same.

A lecture or show every month is the programme decided upon by the Leyton and Dis. C.B.S., and if it is faithfully carried out, the latest of our East suburban societies should become a power in Metropolitan cage bird circles. Most attractive indeed is the syllabus drawn up for the first twelve months; the committee evidently intend to give the young members a chance of learning something about cage birds. Mr. A. B. Forse, 31, Thornhill Road, Leyton, is the Hon. Sec., and will be pleased to give information to intending members.

The members beg to thank all who have kindly given to our Cup and Special Prize Fund for Annual Show, a great number of valuable prizes being offered for local exhibitors. We are pleased to say the strength of the society keeps increasing, four new members joining at our last meeting, bringing the membership to 87. We find a good number of these joining are new to this interesting hobby, having taken it up since the formation of our society, with its interesting lectures, etc., which is very encouraging to the promoters. I shall be pleased to give information re membership to any desiring it.—J. MUNRO, Hon. Sec. Bristol C.B.S., Pretoria Villa, St. John's Lane, Bedminster.

Who says they won't Feed?

I had a nest of young Chaffinches reared by a pair of Scotch Faney Canaries, writes Mr. C. Farrow (Merthyr), and all are now well on the perches.

The Crested Canary Club.

There will be a meeting of members of this club at the Napier, 25, High Holborn, on Tuesday next, July 2nd, at 8 p.m., to receive the result of the voting from the scrutineers on the several items submitted to the whole membership.—JOHN TYSON, Hon. Sec.

Is it a Record?

I should like to know if any readers of your valuable paper ever had a hen Canary lay 10 eggs? One of mine laid three, missed one day, and then laid seven more. I have bred German Canaries eight years, but never had more than seven eggs at once. I should like to know if this is a record.—S. BULLINGHAM.

Curious Site for Thrush's Nest.

Five young Thrushes have recently been reared in a nest built in a flower pot containing geranium cuttings standing on a shelf in a greenhouse which Mr. J. E. Bourne, florist, of Longton, Staffs., has in the cemetery gardens. The youngsters have taken to the wing during the last few days, and the empty nest is now an object of much interest at Mr. Bourne's nursery on Trentham Road.

The Yorkshire Union.

The Open Winter Shows for 1907-8 are as follows:—Oct. 4th and 5th, HALIFAX; judge, Mr. A. Hirst. Oct. 11th and 12th, WINDHILL; judge, Mr. W. Mundell. Oct. 19th, SKELMANTHORPE; judge, Mr. J. Robson. Oct. 26th, GT. HORTON GOOD INTENT; judge, Mr. R. Halliday. Nov. 2nd, SANDY LANE; judge, Mr. R. Sutcliffe. Nov. 9th, QUEENSBURY; judge, Mr. A. Ambler. Nov. 16th, DENHOLME and THORNTON; judge, Mr. J. N. Harrison. Nov. 23rd, CITY OF BRADFORD; judge, Mr. John Greaves. Nov. 30th, SHIPLEY; judge, Mr. J. H. Payne. Dec. 7th, DEWSBURY; judge, Mr. J. C. Barnes. Dec. 14th, LAISTERDYKE; judge, Mr. W. H. Shackleton. Dec. 21st, BRADFORD (WEST); judge, Mr. M. Broadley. Dec. 27th and 28th, HUDDERSFIELD; judge, Mr. John Dawson. 1908—Jan. 4th, MANNINGHAM; judge, Mr. C. A. House. Jan. 10th and 11th, ECCLESHILL; judge, Mr. R. Carr. Jan. 17th and 18th, BRIGHOUSE; judge, Mr. W. A. Cowgill. Jan. 24th and 25th, GT. HORTON; judge, Mr. John Broadley. Feb. 3rd, KEIGHLEY; judge, Mr. J. Wilcock. Windhill, Eccleshill and Gt. Horton Societies have not yet decided whether a one-day or a two-day show will be held. Mr. H. W. Battye and Mr. J. Wilman were drawn to judge the Denholme and Thornton and Huddersfield Shows respectively, but were unable to officiate.—FRED HAMMOND, Hon. Sec.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at east 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

*Oct. 4 and 5.—**Burnley** (J.H.R.)
*Oct. 10.—**Peterborough C.B.A.**

(Secretaries desiring the initials of their Judges inserted, should forward same on at once.)

Dulwich and Peckham.—July 4th (7.30 p.m.), at the Herne Tavern, Peckham Rye, S.E. Judge, J. Robson. Champions, eight; Novice, seven; Selling, one. Hon. Sec., W. Hodson, 209, Crystal Palace Road, East Dulwich, S.E.

City and Suburban.—July 6th, at the Church Institute, Paddington Street, W. Judges, C. Prior and J. Robson. Canaries, 24; Hybrids, British and Foreign, 14. Entries close (members only) July 1st, to V. Wynn, Hon. Sec., 22, Park Lane, W.

Hastings First Feather Show will be held July 3rd. Mr. J. Stevens will judge.

Writing from Perry Hill, Catford, on June 25th, Mr. A. Blanchflower says:—I enclose P.O. for advt., and thank you for inserting my advt., although 6d. short. I had over 60 answers to that advt., and sold £7 10s. worth, which at this season of the year is, I think, a marvel.

ILLUSTRATED IDEAS

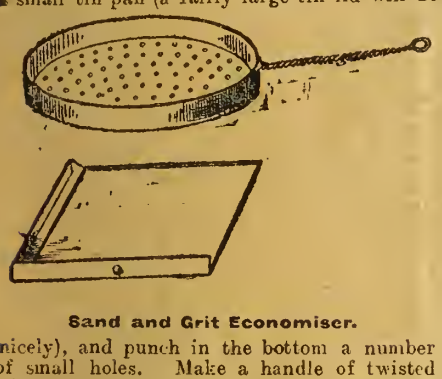
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 113.

A SAND AND GRIT ECONOMISER.

Sent by L. P. Luke, 9, Piggott Street, Halifax Road, Brighouse.

I enclose a sketch of my sand and grit economiser. It can be easily made. Procure a small tin pan (a fairly large tin lid will do



Sand and Grit Economiser.

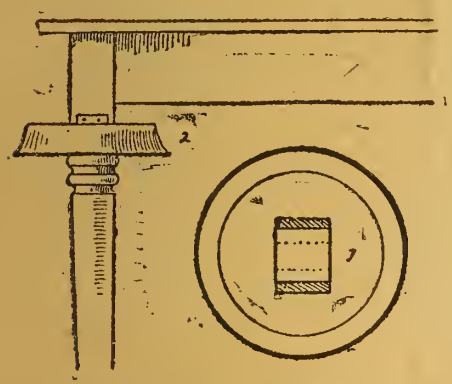
nicely), and punch in the bottom a number of small holes. Make a handle of twisted wire, solder it to the tin, and the implement is ready. It will be found that this will not only sprinkle the sand evenly and finely, but will reserve the grit, which may then be placed in a portion partitioned off for it on the bottom of the cage or in a grit tin. You can prevent much of it having to be thrown away and wasted.—L. P. LUKE.

No. 114.

TO KEEP MICE OUT OF INDOOR AVIARY.

Sent by W. E. Sweetman, The Lawn, Vicarage Road, Battersea, S.W.

I enclose plan that I have adopted to prevent mice from getting into an indoor aviary which stands upon a table. I bought four cake tins (one for each leg of the table) at a penny bazaar, and cut a hole in each to fit the square part of the table leg (as shown in sketch). The way to cut the holes is—



TO DEFEAT THE MICE.
1: Tin, showing flange left when cutting.
2: Tin fixed in position on table leg.

firstly, to mark off the squares on the tins (as shown), leaving a lug each side for tacking to the table leg; then borrow the housekeeper's flat iron (I had to try a little flattery before I could get it), then, with a hammer and chisel, cut out where marked (don't forget to leave lugs). The tin being very thin, the job will soon be done. Fix the cut-out tins on legs as shown in sketch. If the legs are round all the way up, then cut round holes instead of square. I need hardly say that it is impossible for the mice to get over the tins. If you watch at night you will see that when they (the mice) get as far as the tin they will fall down with a bang that will make you say: "Serves you right."—W. E. SWEETMAN.

REVIEWS OF SCHEDULES.

Luton First Feather Show.—July 10th. Judge, Mr. J. Robson; 13 classes:—Nor., Yorks, Crests, Brit. and Novice, two each; A.O.V., Mules, Foreign, one each. Entry fee, 9d.; prizes on sliding scale. Entries close July 6th, to Mr. E. Cherry, 4, Peel Street, Luton.

Grimsby.—July 18th. Judge, Mr. G. Gardner; eight classes:—Nor., two; Selling, one; Singing, one; Brit., two; Foreign, two. Prizes, 10s., 5s., 2s. 6d.; entry fee, 1s. 6d. Entries close July 9th, to Mr. S. Lee, 335, Hainton Avenue, Grimsby.

Treherbert Show.—July 18th. Judge, Mr. E. Gibbs; nine classes:—Nor., Yorks, A.O.V., Mule, Foreign, Local, one each; Brit., three. Prizes, 10s., 6s., 3s., and a card; entrance fee, 2s. Entries close July 11th, to Mr. W. James, 38, Herbert Street, Treorchy.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one star the runners up.

Uncle Peter is always sorry when he cannot print all the nice pieces about birds sent to him by his little nephews and nieces, and the hardest part of his work is making up his mind that some really must be left out, as there is not room for all.

P. Thurston sends a very well written piece about a "Red-headed Woodpecker"—an American bird apparently, as he is said to do damage to maize crops growing in the States. Also he is fond of fruit, and "seizes an apple by striking his open bill deep into it, and bears it off to the woods." This method of carrying an apple seems hardly likely. We must consult President Rooscvelt about it.

H. J. Kinvig sends a very full and careful account of the Budgerigar. But it is not original, and is much too long for the corner.

Sammy Ferguson tells about a 1st prize yellow Yorkshire hen, who began laying very early this year, and

Alice Cox tells a funny story of a friend of hers who put a pair of Canaries into a newly-painted cage, and the poor cock bird got stuck to the perch. It was not done on purpose, but Uncle Peter is sorry for the poor bird all the same.

* The Sparrow.

This courageous, impudent and quarrelsome bird is very familiar in Great Britain, and especially in the southern counties of England. There are few who have not seen this little bird, when pressed with cold in the winter, come to our windows for his donation of crumbs; it is also very fond of grain of various kinds. This impertinent bird has no scruple in perching on the pig's trough and partaking of his dinner, or in mixing with any other creature when it feels inclined to. The Sparrow also delights to peck at a newly-thatched house to find insects and seed, and such like. The nest of the Sparrow is generally built in holes and spouts of houses, and differs in its construction. The eggs are of a white colour, speckled with black in many places. The eggs generally number from four to five.—Sent by G. R. HOUGHTON (aged 14), 22, Byron Road, New Road East, Copnor, Portsmouth.

* The Chaffinch.

The cock Chaffinch is a very attractive looking bird, and his song is very cheery and sweet. The hen is not such a pretty bird as the cock, being of a duller colour. Their nest is the prettiest possible, being built in a tree-fork or bush or hedge, always securely built, and fashioned with wonderful neatness and beauty. It is made of moss and lichens on the surface, and lined with wool, hair and feathers, the last two being the finishing substances. Four or five eggs are laid, of a winey-reddish, spotted and streaked, mostly near the large end, with a rich, dark sienna brown. I think the hen is the principal, if not the sole, architect and builder. Early in the autumn the birds separate, the males flocking together, and the females and young birds assembling in other flocks.—Sent in by WILLIAM CORNES (age 15), 130, Fernbrook Road, Lewisham, S.E.

* The Robin Redbreast.

Our old familiar friend Cock Robin continues to be as great a favourite as ever with the average Englishman, although we know more of "his funny little ways" than we used to do; but no matter. We do not see much of him during the summer—he is then otherwise engaged; but he always remembers us and the hospitality we have offered him, from time immemorial, as soon as the short cold days of winter render it more difficult for the birds to provide for their daily wants; then he comes round our homesteads and sings his pretty, cheerful song on the window-sill, where on more than one occasion I have known him rear a brood of little Robins when the revolving year had brought bright summer round again.—THOMAS POTTS (age 14), 82, Clayton Street, Jarrow-on-Tyne.

A Peculiar Goldfinch.

We have a Goldfinch which has a very peculiar habit of throwing its head backwards over its back. He does it because he is very nervous, and seems to do it more frequently when anyone is watching him, and will actually over-balance himself and fall off the perch. He happens to be a Muler, and his offspring are affected the same. Although he is affected in this way, he is in very good health and a good singer.—Sent by HAROLD SULLY (age 13), 44, Wellington Road, Bridgwater, Somerset.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Altrincham C.B.S.—July 2nd, at Central Cafe, 8. Lecture, "Colour Breeding and Colour Feeding," by Tom Harrison. Nest Feather Show, July 13th, judge, Mr. A. Wellings.—T. Harrison, Sec.

Ashton-under-Lyne and Dis. O.S.—June 29th, at 16, Old-road, 7.30. Table Show of Yorkshires, judge, Mr. J. R. Schofield, Mossley.—H. Foden, Sec.

Bermondsey and Dis. F.S.—July 2nd, at Samson's Castle, 8.30. Young Stock Show.—A. Lupton, Sec.

Blaydon-on-Tyne and Dis. C.B.S.—July 6th, at Co-op. Hall, 7.30.—D. A. Ogilvie, Sec.

Bolton and Dis. O.R.C.S.—July 1st, at headquarters, 8.—J. Stringer, Sec.

Bradford (East) O.S.—July 2nd, at Park Chapel Schools, 8. Arrangements for ramble July 6th, also for First Feather Show on July 27th.—H. Hill, Sec.

Bramley and Dis. O.S.—June 29th, at Carnival Committee Rooms, 7.30. Lecture, "Colour Feeding," by Mr. T. Bennett, Bradford. All fanciers invited J. Metcalfe, Sec.

Bristol C.B.S.—July 3rd, at Crown Hotel. First Feather Show; judges, Mr. Telling and Mr. H. Manley. All exhibits must be staged 6.45 p.m. Members' judging competition to commence at 7 p.m. sharp and finish at 7.45 p.m.; entries close July 1st. All cards in connection with Cup Fund to be returned to Hon. Sec. at next meeting.—J. Munro, Sec.

Broughty Ferry.—July 3rd, at Baker's Hall, 8.—C. Muir, Sec.

Chester and Dis. C.B.S.—July 1st, at Nag's Head Cocoa House, 8. Arrange Nest Feather Show.—A. J. Red, Sec.

City of Bradford O.S.—June 29th, at Traveller's Rest. Members' First Feather Show, birds staged 2.15, classification both sections; judge, Mr. W. Mann. Cl. or Tkd. Yell. Yorks., Green or Cinn., Buff, ditto, Un. or Foul Yell, Buff ditto. Meeting, July 6th, 8.—P. Stansfield, Sec.

City of Dundee and Dis. N.M. & B.B.A.—July 3rd, at Doig's Rooms, 8.—Alex. Miller, Sec.

City of Hull C.B.S.—July 1st, at Oddfellows' Hall, 8. Classification for Show, etc.—F. F. Potter, Sec.

Clapham and Dis. Open C.B.A.—July 1st, at Alexandra Hotel, 8. Final arrangements for First Feather Show. Several new members to propose, making over 50.—S. H. W. Baker, Hon. Sec.

Coventry O.S.—July 3rd, at Sydenham Palace, 8.30. Entries for Nest Feather Show.—G. Turrell, Sec.

Darlington C. & B.B.F.A.—July 3rd, at George Hotel, 8. Discussion.—R. S. Black, Sec.

Denholm and Thornton C.B.S.—July 2nd, at Bull's Head, Thornton, 8. Members' Show, July 6th.—J. Jarratt, Sec.

Dulwich and Peckham C.B.S.—July 4th, at the Herne Tavern, 8. Young Bird Show; fanciers will receive a hearty welcome.—W. Hodgson, Hon. Sec.

East Bowling and Dis. B.F.A.—July 13th, at Barley Mow, 8. To arrange on or off the trip mentioned.—J. E. Hudson, Sec.

Eccles and Dis. C.B.S.—July 3rd, at Grapes Hotel, 8. Arrangements for First Feather Show, etc.—A. Wheatley, Sec.

Edinburgh Norwich and M.B.S.—July 4th, at 142, High-street, 8. Lecture by Mr. E. G. Wright, "Breeding and General Management of Cage Birds." All fanciers invited.—W. Dunlop, Sec.

Exeter and Dis. C.B.S.—July 2nd, at Oddfellows' Hall, 8. Second Feather Show.—R. H. Folley, Sec.

Gloucester and Dis. C.B.S.—July 4th, at Ram Hotel, 8. Confirming of schedule and appointing judge for Open Show.—J. Houghton, Sec.

Goldthorpe, Thurnscoe and Dis. C.B.S.—June 30th, at Horse and Groom, 7. Arrangements for First Feather Show. Members note Rule 4 in card.—W. Jackson, Sec.

Hartlepools C.B.S.—July 2nd, at Y.M.C.A. Rooms, 8. Entries, etc., for Nest Feather Show on July 13th.—E. Woodhead, Sec.

Jarrow and Dis. C.B.F.S.—July 3rd, at Lockhart's Cafe, 7.30.—J. T. Carrick, Sec.

Laisterdyke B.F.A.—July 2nd, at Royal Oak, 8. Business important.—J. Pownall, Sec.

Larkhall C.B.C.—July 6th, at Miner's Hall, 7.—G. Kirk, Sec.

Leeds Roller C.C.—July 6th.at Lockhart's, 7.30. Roller fanciers are heartily invited to attend.—C. Towes, Hon. Sec.

Leicester Hand-in-Hand.—July 2nd, at White Swan Hotel, 8. Lecture, "Colour Feeding." Entries for Nest Feather Show.—C. Draper, Sec.

Leigh and Dis. C.B.S.—July 2nd, at Railway Hotel, 7.30. Prize money, Nest Feather Show.—A. Parks, Sec.

M. & N.C.O.S.—July 1st, at Deansgate Hotel, 7.45. Entries for First Feather Show.—E. Jones, Asst. Sec.

Maesteg and Dis. C.B.S.—July 1st, at Oddfellows' Hotel, 7.30.—W. Jenkins, Sec.

Morriston and Dis. C.B.S.—July 6th, at Woodfield-street Coffee Tavern, 7.30.—D. Jeremy, Sec.

Newcastle and Dis. C.B.S.—July 4th, at Lockhart's, 7.30. Paper on "Border Fancy," by Mr. J. Patterson (Chirnside). Fanciers invited.—Curry and Hutchinson, Secs.

Nottingham and Notts O.S.—July 3rd, at Cobden Hall, 8.—G. E. Wilkinson, Sec.

Oldham and Dis. C.B.S.—July 9th, at Textile Dining Rooms, 8. Selection of judge, classification for November Show.—A. Ackroyd, Sec.

Ormskirk and Dis. C.B.S.—July 1st, at headquarters, 8. Final arrangements for Young Bird Show.—T. H. Tiffen, Sec.

Pendleton and Salford O.S.—June 29th, at Congregational Hall, Chapel-street. First Feather Show, birds to be tabled by 2 p.m.—W. Jackson, Hon. Sec.

Preston O.S.—July 3rd, at Empress Cafe, 8. Arrangements for First Feather Show, etc.—J. W. Cleminson, Hon. Sec.

Reading and Dis. C.B.S.—July 3rd, at Palmer Hall, 8. Mr. Vasey, of Aldermaston, will introduce the subject of "Feeding."—G. A. Charles, Sec.

Rochdale Good Intent C.B.S.—July 3rd, at Temperance Club, 8. Election of four committee, and report of First Feather Show.—S. M. Clayton, Sec.

St. Helens and Dis. O.S.—July 1st, at George Inn, 8.—T. Vose, Sec.

Seaham Harbour and Dis. C.B.B.A.—June 29th, at Station Hotel, 7. First Feather Show business.—J. M. Nicholson, Sec.

Sheffield and Dis. C.B.S.—July 4th, at Wentworth Cafe, 8. Lecture, "Moulting and Colour Feeding," by Mr. R. Barker. Members requested to return unsold show tickets.—Bishop and Pilley, Secs.

Shipley O.S.—July 2nd, at Victoria Hotel, 8. Balance sheet, yearly outing, etc.—H. Dobson, Sec.

South London Col. & F.A.—July 10th, at the Royal George, 7.30. Discussion re outing to Tunbridge Wells Show.—G. A. Jefferys, Sec.

Spen Valley C.B.S.—June 30th. First ramble, leaving Cleckheaton Station at 1.3. Members and friends cordially invited.—A. Whitehead, Hon. Sec.

Spen Valley C.B.S.—July 1st, at Northgate Hotel, 8.—A. Whitehead, Sec.

Stockport B.F.A.—July 2nd, at Boar's Head Hotel, 8. General business.—W. Stafford, Sec.

Wakefield Roller C.C.—July 1st, at Elephant and Castle, 8. Fixing date of Show, judges, classes, etc.—J. Netherwood, Sec.

Wallasey and Dis. C.B.S.—July 4th, at St. Mary's Schools, Liscard, 8. Final arrangements for Young Show.—Wm. Mallinson, Sec.

Walsend and Mid-Tyne C.B.S.—July 2nd, at Station Hotel, 7.30. Nest Feather Show. Subscriptions now due.—J. R. Evans, Sec.

Warrington and Dis.—July 4th, at Blue Bell, 7.45. Prize money for Young Show.—Jas. Emmet, Sec.

Welsh National C.B.S.—July 1st, at Mansel's Arms Hotel, 8. Complete schedule, Annual Show.—S. J. Nichols, Sec.

West Bromwich and Dis. C.B.S.—July 3rd, at Mr. Green's, Bull-street, 8. Discussion for a new meeting room.—T. Duffield, Sec.

West of Scotland Norwich, &c.—July 6th, at Nelson's Temperance Hotel, 4. Nomination of judges for Annual Show, and First Feather Show of all varieties of Canaries.—Geo. Smart, Sec.

Wibsey and Dis. C.B.S.—July 6th, at Wibsey. Cricket match, Windhill v. Wibsey C.B.S., wickets pitched 2.30. Dinner will be provided at Horse and Groom Inn at 1s. 3d. per head. All friends wishing to join us please send a post card by Wednesday, July 3rd, to 53, Smiddles-lane, Bankfoot, Bradford.—E. W. Johnson, Sec.

Widnes and Dis. O.S.—July 4th, at Grosvenor Hotel, 7.30. Last meeting previous to Show.—S. Andrews, Sec.

Windhill, Shipley and Dis. O.S.—June 29th, at Blue Bell Hotel, 8. Cricket match at Wibsey, July 6th, etc.—E. Broadley, Sec.

York C.B.S.—July 8th, in All Saints' Church Rooms, 6.45. First Feather Show, seven classes; judges, Messrs. A. Richardson, A. White, and G. B. Chittenden. Country Ramble, July 14th, meet at station 2.45 a.m. Destination, Castle Howard. Return, 7.47 p.m.—T. Boyle, Hon. Sec.

Yorkshire C.C.—July 13th, at headquarters, 5. Committee meeting to arrange patronage; all societies wishing to obtain same to apply before that date.—Samuel Dean, Asst. Sec., 24, Crossley-st., Great Horton, Bradford.

Applications for patronage of the Cinnamon-marked Yorkshire C.C. will be received up to the end of July. Four open classes for Cinn.-marked Yorkshires must be provided. Date of show and judge's name must also be stated. Will secs. please make early application?—R. GARNETT, Hon. Sec., 17, Woodville Terrace, Windhill, Shipley, Yorkshire.

Once more I have returned to hard labour, after four weeks rest. I did not read a paper while away but "C. B."; this I could not miss, although I had to order it and walk two miles to get it. That only enhanced the pleasure of perusal. Wishing you every success.—T. PEARSON (Live Stock Agency, Greenwich).

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons—**J. North.** Miscell.—**"Old Judge."** Border Fancies—**J. CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Losing His Coat.

C.S.M.—Keep your bird in a bright, warm place, away from draughts, and cover over at night with a warm cloth. Give in the drinking water fresh daily ten drops of Tincture of Quinine, and three times a week give a small teaspoonful of egg food, to which add six drops of Parrish's Chemical Food. You do not tell me under what conditions you have been keeping him, or your mode of feeding. If you do not see an improvement in him in three weeks' time, write again, giving me full particulars.

A Swollen Eye.

A Novice.—Bathe the swelling underneath your bird's eye twice a day for three days with a little warm water, applied gently with a piece of soft sponge. Then prick with a clean needle, and lightly press, when you will probably squeeze out some matter. Should no matter come away, then lightly paint, with a small camel hair pencil brush, with a little colourless Tincture Iodine for a few days—but be careful that you do not get any in the eye. For the coughing, let it have fresh daily in the drinking water ten drops of glycerine and ten of paregoric. You may continue this for a fortnight. Put a piece of mutton suet between the bars of the cage for it to peck at.

Fertile or Otherwise?

Onward.—As you say the cock has not been with the hen since she laid her first clutch of eggs, then you may be sure those she has laid since will be unfertile. Had you have run the cock with her as soon as you had parted the youngster from her, you might have had one or two fertile.

The English Climate.

W.H.P.—Your hen left her eggs through being taken ill, but what the nature of the illness was I am unable to tell for certain. I am inclined to think she caught a chill, the result of the very unseasonable weather we have been experiencing. You have treated her quite correctly, and probably by now she is well again. If you value her, and wish to use her another year, I should advise you not to let her have another nest this year. (2) Yes; your feeding is quite correct, and the fact of your hens not coming into breeding condition can only be accounted for by the wretched weather we have been experiencing. I have heard of a great many cases such as yours this season—it may be some consolation to you to know that you are not the only one who has been so unfortunate.

Ill for Two Years.

Beer.—Put your bird in a bright and warm corner, out of the way of any draughts, and if you keep it in a wire cage, cover it over (except the front) with a warm cloth during the day, and wholly cover it at night. Give in the drinking water, fresh daily, ten drops each of the following:—Ipecacuanha wine, glycerine, and oxymel of squills. As your bird has been ill so long, I think you will have to continue the treatment for some little time. Should it get all right, it will no doubt sing again—but two years is a long time to be ill. You may give it occasionally a little milk sop, over which sprinkle a little maw seed.

YORKSHIRES.

Answered by H. W. BATTYE.

At Fault.

J. E. Owens.—From your description of your birds and their having had two nests of unfertile eggs, there is evidently something wrong with either the cock or the hen. Birds for breeding purposes should be bought before April, as when bought so late there is always the chance of them having been tried and found wanting, and the purchaser has to take that risk. You say the cock is singing, so that if it is his fault it may be through him being over keen and "proud"; or it may be the hen that is at fault (probably it is). I would advise (if you can do so) trying them both with fresh partners at once. You will just have time for them to lay, hatch and rear one nest each.

A Variety of Matters.

Manxman.—Your pair of Yorkshire Greens, with the five young ones, should be fed as follows:—Seed hopper kept well filled with good white canary seed; egg food supplied fresh at least twice a day (oftener if you can manage it). Use both the yolk and white of the eggs. The white of a hard-boiled new-laid egg will not harm birds if eaten twenty-four hours after being mixed, if kept in a cool, dry place. Give as much hemp as the birds will eat. I generally crush my own. But do not give any linseed when the birds are feeding young. Give green food as often as you can. The birds like everything fresh; little and often should be your rule to work to during breeding time. (2) Give the other Green hen that pants at night 15 drops of the following, well mixed together:—Glycerine two parts, whisky three parts, and vinegar one part. Keep free from draught. Stop the linseed altogether. The temperature of a room in which birds are kept should be from 55 to 65 degrees. A room that keeps fairly even, and does not vary suddenly is best, even if a little colder than the one that is not regular; this variation is one of the worst faults of the out-door wood erections for bird-keeping.

Stomach and Legs.

Yorkshire.—Your young bird that died was very probably suffering from inflammation of the bowels, and if you had examined it you would have found its stomach and belly swollen and red. In a similar case do this, and if found as mentioned above, pull out a feather from the tail and dip it in turpentine, and gently paint the bird's belly. If caught in time, this is a quick and fairly certain cure. (2) I don't know that you need trouble about your birds' legs being pale if the birds are sound and healthy—and you don't say anything about them being ill. Perhaps their legs will come a better colour as they grow older.

More Particulars Needful.

Griffiths John.—The hen that you say seems sleepy cannot be, as you say, looking in the pink of condition. I am inclined to think she is a used-up old hen. But you do not say whether you have tried to breed with her, or you intend to try, or what, and without a clearer and fuller statement of particulars, I should not like to advise you. If you care to rewrite your query, and give full particulars, will do my best to advise you.

Weak Back Claws.

J.C.—Many breeders have the same trouble as yourself—viz., young birds developing straight back claws. You say you have bathed the bird's feet in warm water and worked the joints of claws, but they still remain straight; also you have given it an extra wide perch, and it appears more comfortable. The former treatment will do no harm, but the latter is just opposite to what I should have done under the circumstances. I should not be exactly seeking the bird's comfort, but its cure. I always keep on hand a set of perches about the thickness of an ordinary lead pencil, cut three-cornered (a triangle shape). These I use in place of the ordinary perches when I happen to have a young bird that shows a tendency to weakness in its hind claws. It does not always cure, but in the majority of instances it is of benefit, as perches this shape have a tendency to force the bird to double in its back claws and grasp them. An over broad perch tends to induce the bird to stand with the claws straight out. Try similar perches to those I have described in place of the broad ones for a fortnight when I think you will find an improvement. A little weakness may have had something to do with it, and no harm would be done by giving a few drops of chemical food in its drinking water for a week or so. I have known birds begin to slip the back claw through being suddenly startled.

Nervousness Brings Trouble.

Toby.—Yes, by all means take the cock bird away when you set the hen, and the probabilities are the hen will do better by herself. The weight of the cock when sitting on top of the hen would not be the cause of the young ones being all dead; but the hen would most likely be jealous of the cock's attentions to the young, and would stick fast to her young ones instead of coming off and giving them some food—though you do not say whether they had their crops full of food or not. When a hen is of a very nervous disposition, and she gets a fright, she will do this sometimes. A thunderstorm will cause it; in fact, I had a case of this kind owing to last Saturday's thunder-storm.

A Case of Clear Eggs.

M.G.T.—To get birds into breeding condition you will meet with nothing to beat the old-fashioned egg food, made from hard-boiled new-laid eggs and good, wholesome home-made bread, or good biscuits. A really satisfactory substitute would save bird breeders a good deal of trouble, but so far as my experience goes that substitute has not yet been found. Give the yellow cock a few drops of whiskey and glycerine (equal parts) in his drinking water, fresh every morning, and give him a little egg food, in which mix six drops of Parrish's Chemical Food, and sprinkle a pinch of maw seed over the lot. You say the other cock, the Border Fancy, was singing briskly when paired up, but seemed a bit afraid of the hen. If so, the four eggs will most likely be fertile, unless the hen is a barren one; and if the eggs are clear from this cock as well as the other, I should come to the conclusion that it was the hen's fault.

Gone Out of Condition.

H.E.J.—Your feeding has been, on the whole, fairly correct, but I would advise for a general feeding stopping both hemp and inga seeds, giving instead a little maw seed two or three times a week. On the days you do not give the maw seed, give half a teaspoonful of summer rape. Very little hemp should be given to birds except when the hens are feeding young ones, when you may give as much as you like. Your hen has evidently got seriously out of condition, and may be of no further use for breeding purposes this season. Separate her from the cock at once and give her a little egg food fresh daily, and mix with it six drops of syrup of buckthorn, and sprinkle a pinch of maw seed over the lot. Let this, along with white canary seed, be its food for one week, and then for a week or ten days mix with the egg food six drops of Parrish's Chemical food, instead of the syrup of buckthorn; and mix with its drinking water ten drops of good whiskey fresh daily for a fortnight, when you will, I think, see a great improvement. If at that time your hen seems all right you can again mate her to the cock, though it will be somewhat late for breeding. The hen should have had a week by herself after you took away her second batch of eggs.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Age for Breeding.

W. Blake.—Both the Crest and Crestbred are at their best when three years old; they improve each year until they attain that age. There is a great difference in the constitutions of birds. Many are worn out at three years, while others will go on for six years, especially the cocks, but these are generally birds from a strain with robust constitutions. Speaking generally, you may consider you have had the best out of your birds after the third season. The better plan is to mate a young cock to a one, two, or three year old hen, or a young hen to an older cock. Avoid, if possible, mating two young birds together. Two-year-old birds may be mated together with the best results. But the great secret to obtain stamina is to breed from strong healthy parents; when this is the case you may break a rule as to age.

CINNAMONS.

Answered by J. NORTH.

Gone Bare on Poll.

G. Easton.—Many birds of this variety are subject to this loss of head and neck feather. In many cases I think it attributable to the crossing with Crestbreds, but it may arise from other causes, such as malnutrition through liver trouble, or from visible insect mischief, such as that of red-mite or grey-lice; but these you seem to have settled by dusting with insect powder and washing with quassia water. Another cause of this baldness is the work of an invisible parasite under the skin. This can be remedied with precipitated sulphur gently rubbed in with the finger, or made into a lotion with milk, slightly moistening the bare places with it three or four times a week. Give plenty of salad and frequent baths.

LIZARDS.

Answered by BARKER CLEGG.

Natural Colour Lizards.

C. Heap.—Classes for N.C. Lizards are few, if any, at the present time. I am pleased to hear that you have a number of nice youngsters. If you aspire to compete under the popular classification, you must, certainly, if you want to be in the prize list, colour feed them. If, as you say, you object to hot pepper, you may use the cold colour food. I cannot recommend any special food in these columns, so refer you to advertisements in "C.B.," where you can easily select a good colour food that will answer the purpose. Yes, I have known a N.C. Lizard to win against fed ones in good company, but not of late years.

ROLLERS.

Answered by "SCHOOLMASTER."

Dropping Large Feathers.

Canary.—Your bird will not sing as long as he is dropping feathers. I should think his losing a few large feathers (I suppose you mean wing or tail) shows he is commencing to moult. If you attend to him properly, he will soon go through, and commence to sing again as soon as he recovers from it. Don't feed him on packet seed. Give the following: Canary one pint, summer rape a half pint, linseed a quarter pint, well mixed together. Get the best quality. On every other day give a teaspoonful of egg bread, or patent canary cake (see advertisement columns) with which you have well mixed 5 or 6 (not more) drops of Parrish's Chemical Food, obtainable from any chemist. Also mix a half pint each of maw and hemp seeds, and give a teaspoonful on the days you are not giving the egg food. One feed of packet mixture a week will not hurt. Let him have a bath on nice warm days—when they come. This treatment should bring him through his trouble quickly and well. Don't hang him in a draughty window, nor high up in the fumes of gas, etc. Give him a sprig of green food, or a little ripe, sweet apple, every day.

Bare About the Head.

G.M.—Cock Rollers often go bare about the head and neck during spring and summer. I think it is because their owners do not give them green food sufficient. A little young lettuce leaf, or watercress, should be given every day, or else rape seed soaked in cold water (change this frequently) until it begins to sprout, dabbing it dry in a cloth before putting it in to the birds. I also give my own birds seeding chickweed, shepherd's purse, and groundsel tops during the summer, and find they do them much good. Ripe, sweet apple is valuable, too. I don't know that it will be wise to interfere with the bird now, seeing his moult cannot be far off, when his feathers should come again. The best thing you can do at any time is to take a spot of paraffin oil on a finger tip and gently rub it into the bare place. This should be done every day for a week or so, but stopped at once should quills he felt coming through.

Breeding Bird "Gone Off."

Semper Fidelis.—It is hard lines to have a cock bird "go off" which has bred you twelve young this season. From his symptoms—sitting puffed out on the perch—I should say he has upset himself by living on too rich food. Stop the egg food, and give instead, every day, about a teaspoonful of very stale, good sponge cake, made crumbly moist with new milk; let this be fresh made twice a day. Feed on best canary seed only, with half a teaspoonful of maw seed daily. He can have a little green food daily, but I should let it be seeding green food, such as chickweed, or shepherd's purse, or ripe groundsel tops—not too many leaves. Don't give a bath until he recovers, but you could take the chill off some water and blow a little over him with your mouth—just enough to set him preening himself, but not to make him wet. Ripe apple will not hurt. For medicine give dandelion juice, got from a chemist, in the proportion of half a teaspoonful to two tablespoonfuls of water. If you can't get seeding green food, let him have sprouting summer rape, that is, what has been soaked in cold water.

A Breeding Problem.

No Name.—I should think the Border hen you have paired to your Roller cock is either too old to lay eggs, or else she is a barren hen; probably the latter. Barren hens will build a nest and set in it for weeks, yet, of course, never lay an egg. I shouldn't waste any more time with her myself, but try another hen—especially if she is still "sitting on nothing" when you read this reply. I suppose you are sure no eggs have been laid and smashed, or eaten? I don't think your cock Roller has caught a cold, as you say he keeps so lively, for many give over singing when put in the breeding cage, or just afterwards. The same thing happens among all varieties of Canaries. If you put him outside the breeding cage, I daresay he will soon commence to sing at the hen.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Colour Feeding.

Novice.—You cannot do better than follow the instructions sent out with the colour feed you mention. The vendor should know better than anyone else how his own speciality should be used. In each of our two last issues there have been articles on colour feeding, and I should advise you to study them carefully. They contain far more information than I have space to give you in this column. As to your question about seed, I am quite unable to advise you, because you say nothing at all as to how you are now feeding your birds. Speaking generally, maw seed will effect what you require.

Treatment of Young Birds.

Crongie.—I cannot quite understand what you mean. Why put the birds into cages at all? They will do far better flying about the room. They will have more chance to grow, and will also learn to sing from hearing the old birds perform.

First Feather Show.

W. Page.—A young bird is usually at its best about six or seven weeks of age. They are not fully feathered before that age, and after they begin to lose their bloom. Many are exhibited at five, six, seven, and eight weeks. You might try the birds you mention, but I doubt if they will be old enough to score highly.

Young Birds Dying.

D.S.—Your luck has indeed been very bad, and I sympathise with you. Your feeding seems all right, except that, perhaps, you have given too much green food. Don't give quite so much in future. Instead of the mixed seed give the best Spanish canary as the staple food, and a small quantity of the mixed seed each day in a separate tin. You might also try stopping the hemp. It would not be wise to advise you about the lump you mention without seeing the bird. I am inclined to think it is a case of rupture. Cannot you find some local breeder to advise you?

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Gathering and Preparing Ants' Eggs.

In what manner are ants' eggs taken from the hills, and how are they treated for winter use for feeding insectivorous birds?—ANTHILL.

Anthill.—When I resided in the country and kept a Softbill aviary my ants' nests were dug up for me (eggs, ants, and mould), and dropped in a smallish tin box (sort of hat box) with a very tight-fitting lid. This I opened in the aviary, when the birds picked up what ants they liked as they ran about, and sorted out the eggs. The usual plan is to stretch a sheet of newspaper on the ground by the ant hill, weighting down the ends, if necessary, with stones, etc. Then drive a spade into the hill, turning the nest completely over, exposing the eggs, etc. Retire very quickly, and go to another nest (if desired) and repeat the operation. On going back to the first nest, after a fair period of time has elapsed, it will be found that the ants have carried their eggs under the paper for shelter—quite clean and free from earth, etc. Scoop them up with something suitable into stout linen bags (or tins; the former are more easily carried) tying them up tightly, for some ants are bound to go in with them. When a nest is disturbed, the commotion amongst the inmates is something wonderful, and not a little awe-inspiring. Armies of ants rush out and about to do battle with their disturber. Care must be taken to keep them from running up one's arms and understandings, or trouble may ensue. Pull your socks outside your trousers, and put on stout old boots which can be well greased round the uppers. I remember I once used a mixture of soft soap and garden insecticide, having nothing else handy. It was very effectual. Cleaning is unnecessary if gathered as above, though bits of stick, etc., should be picked out after drying is over. To dry mine, I put tin and contents into a just moderately hot oven for some fifteen to twenty minutes, sufficient to destroy all life. The eggs do not want to be browned or shrivelled up. But the heat is easily tested by the hand, and the oven door should not be closed quite to. When suitably dried just store away the eggs in tins in a cool place for future use. Everything depends on how the eggs are gathered—if clean and free (practically) from ants, they could simply be turned out on to an oven shelf covered with grease-proof paper or hot sand; or he dried on hot sand in a frying-pan.

Young Redpoll-Bullfinch Hybrid.

Accompanying this letter you will find a little Redpoll-Bullfinch Hybrid, hatched this morning, and killed outright by its mother, the Bully hen.—J. DAVIES.

J. Davies.—It is, of course, not possible for me, from so young a nestling, to verify the statement that the body was that of a Redpoll-Bullfinch Hybrid. It had only been hatched an hour or so. This was evident from the fact that the yolk of the egg was still to be seen in the stomach of the nestling, seemingly hardly digested to any appreciable extent. Viewed under a strong glass, however, it certainly appeared to have the swollen, rounded bill, broad at the base, so characteristic of the Bullie. It is very hard luck for you to lose the youngster. Apparently the hen had pecked her baby on top of the head, where an effusion of blood was distinctly discernible. I trust you will have a better result next time. Hen Britishers, I always find very uncertain quantities in the matter of rearing young in captivity; I would sooner depend on vigorous German hen Canaries, which make capital "wet nurses."

Young Skylark Going Wrong in the Legs.

When about three weeks old and doing nicely for themselves, my young Skylarks' legs have gone wrong. They seem to lose the use of them. I have kept them in a box with grit in the bottom. Do you think the wood will have affected their legs? Is there any remedy?—H.C.R.S.

H.C.R.S.—It is certainly curious that the greatest trouble anyone who tries to hand-rear Skylarks should be faced with is this loss of use in the legs of the youngsters. I don't think either the wood or the grit in your box would be responsible for the trouble, except so far as they were part of a wrong system—for your system of housing them was certainly wrong. An experienced "old hand" with Larks will tell you at once that the youngsters are seized with "cramp" because they cannot run about on the grass when ready to leave the nest, as they always do when reared under natural conditions out in the fields. I believe there is a lot of truth in this, and should never attempt to hand-rear Larks

without making provision for a grass run. This can easily be accomplished, in a variety of ways, providing one can lay hands on the requisite clover turfs, or suitable grass turfs. If you get two of the cages known as "Lark runners" (the longest size made) and place them together, door to door (both the latter open, of course) you have at once an excellent "pen." Put the nest of Larks in one corner, and place the clover turfs all over the cage floors. The best plan, however, is to get a very long cage (it need only be a rough one, and can have a calico top) made, with doors at each end, and a drawer bottom made of thin sheet zinc. Fill the latter with wet sand, and lay the turfs on this—they will then keep fresh much longer, especially if sprinkled with a little water on top now and again. No doubt you can work the idea out to suit yourself. It is a very pretty sight indeed to see the youngsters come running up to be fed. Of course, you must feed on the right food, and mix some finely-minced greenstuff amongst it; also a little sprouting rape seed. Don't on any account omit mealworms cut in two and dipped in milk. And last of all, make the water you give them to drink the colour of light port wine with Parrish's Chemical Food. You won't be troubled by cramp then.

A Young Raven.

Egbert.—You can't keep young Ravens without you give them raw meat of sorts. At least, I shouldn't like to try. In a state of nature they are great meat-eaters and scavengers generally—the "bigher" the carrion they light upon the more tender their regard for it! You, of course, need not give your bird putrid flesh—though, doubtless, you will go up in his opinion if you do. Ravens eat flesh of all kinds (animals, birds, rats, mice, frogs, etc.), fish, beetles, worms, etc., and sometimes grain. No doubt your own youngster will manage to largely subsist on table scraps if you can find him ma sufficiency—a sort of culinary "olla podrida" comprising meat, gravy, fish, fowl, potatoes, greens, bones, bread, etc. As a basis for the table scraps you cannot heat a good brand of dog-biscuit, containing meat. Break them up, soak them in hot water, squeeze as dry as possible when cool, and mix in with the rest. Get him a feed of Sparrows, mice, etc., as often as you can. If you are cleaning out a fowl, rabbit, etc., preparatory to cooking it, remember that its internal economy will be devoured with keen appreciation by your Raven—or Magpie, Jay, or Jackdaw, if you possess such. I should think your Raven will make a grand pet, providing his proper feeding makes no tax upon you. You ought, really, to let him run about the place (cut off four or five primaries in each wing, about two-thirds up) for they are quite unsuited to a cage, however large. Provide facilities for a bath at all times.

Linnets not Doing Well.

Change of Seasons.—I think the seasons have already changed, don't you? I never remember recommending only one part canary seed in a Linnet mixture. It must have been a printer's error which escaped my notice—unless, that is, it was recommended for some particular purpose, or the proportions of the other seeds were correspondingly reduced. I really cannot offer any opinion as to the cause of your Linnets' deaths; there is nothing in your letter to help me to do so. Your seed mixture (German rape three parts, English rape two parts, and linseed and canary seed one part each) is not one that I should myself use. Still, it is not at all likely to kill birds. Probably you will have better luck next time. Linnets are not difficult birds to keep, as a rule. I do not believe in keeping them always in "back cages." The latter are right enough to run them into occasionally for steadying purposes, but they need spells in a larger cage, say the Finch stock cage I so often recommend. I feel sure, too, the alternate use of small and large cages steadies birds more quickly than keeping to one size and pattern. If you notice another bird turning dull and queer, try treating it immediately with dandelion juice (taraxacum). It is an excellent bird medicine for internal "upsets." Put half a teaspoonful in every two tablespoonfuls of drinking water, fresh daily. Give a dose for two days in succession; then another dose or two on alternate days. Let the bird have plenty of maw seed to eat. Try your luck on the following stock mixture: Canary two pints, teazle, summer rape, and charlock, one pint each, linseed half a pint. Give a feed of maw and hemp occasionally. Don't omit chickweed and shepherd's purse as green food.

Thrush Food and Young Thrushes.

F.B.—The recipe you send (six parts melox, two parts each dried flies, ants' eggs, and meat meal) makes an excellent stock food for Thrushes, Blackbirds, and similar large insectivorous species. The sample in the tin I think very good. I could only suggest one improvement—that you leave out one part of meat meal and substitute one part of ground silkworm cocoons. The latter has just been put on the market, and ought to have been long ago, for it makes a very good item of bird food. You will, of course, make the food crumbly moist in the usual way, with cold boiled potato, etc., etc., as recommended by me. Pleased to know you successfully reared the young Thrushes. The habit of one youngster feeding another has been frequently noticed (also recorded in our columns). It seems particularly prevalent amongst Thrushes. I agree with you that it is funny to see birds only just out of the nest popping mealworms into one another's mouths. I should take no notice of their habit of picking amongst the excreta; it will do them no harm, and they will grow out of it. Supply them with a tin of coarse grit, by all means. Give them some fruit, also never omit vegetable ingredients from their stock food.

Colour-Feeding a Hybrid.

I have bred a nice light Goldfinch Mule, thanks to following advice you gave, marked on shoulders, one wing, and tail, not heavy. It looks a nice colour near beak and on butts. Do you think it a cock, and worth showing. Must I colour feed it, and if so, how?—J. MACKIE.

J. Mackie.—Am pleased, naturally, to hear of your success. I should imagine the bird is a cock, seeing he shows colour in the places you mention—especially so if bred from a buff hen, which you do not state. He certainly will make a good show bird, and I strongly advise you to colour-feed him, or he will be heavily handicapped. The method of doing so is almost identical with that adopted for colour-feeding exhibition Canaries, and with regard to the many points of detail I must refer you to the articles, etc., on the subject published in our pages; see also "Canary Breeding for Beginners." The difficulty with old Mules is to get them to eat soft food freely. As yours is a young bird, do not entirely take this away, but give him a little every other day or so, so that he keeps "the taste" for it. Personally, I should at all times occasionally give exhibition Mules a taste of egg-bread or cake, so that they may always be ready and eager to eat it. When the moulting season approaches (towards the beginning or the middle of July; earlier if necessary) add a faint trace of colour food to this, gradually increasing the quantity until, when the feathers begin to fall, he is on full strength. As the moult draws to an end, gradually reduce the strength of the colour food, but give him a little (weak) twice or thrice a week right through the show season. Do not reduce the strength too soon, however. Canary fanciers do this so that the plumage near the head shall not come out hotter than other parts, and so give an appearance of patchiness of colour; but, of course, a good, hot blaze (no pun intended), or face, is a desirable thing in an exhibition Mule. Personally, I like a little hot pepper in my colour-feed for use with Mules and Hybrids. I add a teaspoonful of rich cayenne to about every two tablespoonfuls of tasteless pepper. You will notice that I mention "soft food" and "egg-cake"; this is because I am quite sure it is unnecessary for any fancier to go to the trouble of making, and incur the risk of using hard-boiled egg and bread, or biscuit. Bake a cake to last a week. When dry crumble it, mix in the pepper, and store it in tins; you are saved six days trouble and get the best results. It should be damped very slightly; never be "doughy," but only just crumbly moist. And I always, when possible, give a fresh supply two or three times a day; it induces the bird to feed. A good teaspoonful a day is the quantity each bird should consume. Full strength should not exceed one teaspoonful of colour food to four or five teaspoonfuls of the soft food. Twice a week dissolve as much citrate of iron as will lie on a threepennypiece in the bird's drinking water (two tablespoonfuls), which will act as a tonic and "colour-fixer."

An Outside Aviary.

Ortsac.—You need not be in any way discouraged or disappointed. In the back yard you describe you can put up an excellent place in which to keep a small collection of birds. Your sketch in its amended form would answer admirably—4 ft. long, 4 ft. wide, and 5 ft. 6 in. high to ridge, and 4 ft. to eaves. Still, you could not hope to breed successfully in it except by including two or three pairs only, or by using only Canary hens, as suggested in my previous reply. You could easily have two removable boards made to fit the front at top and bottom (as a kind of shutter), and put them up during inclement weather. Arrange to have one lath at the bottom (front) to work on hinges, so that a rake fixed to a long broom-handle may be inserted and the floor cleaned out. A door cut in the side will serve to admit food and water. The best means of offering the latter items, however, is to build out a long box from the side (something like the outside boxes provided for fowls to lay eggs in), partitioned, and with doors opening outwardly. Excreta, etc., cannot then well foul either food or water.

A Mysterious Bird.

A. L. Marchant.—You ask me what the breed of the following bird is:—About the size of a Bullfinch, green back, wings, and head, the latter being speckled on the top, and with two stripes of yellow, one each side over the eyes, bill rather stout, underneath colour yellow, legs black, body chubby. The bird, you say, "is a splendid songster, and a mimic of other birds, and I was lucky enough to catch it, some little time ago, after it had been flying about our neighbourhood for some three weeks. It got into a cage that I had hung out, with some seed in it, on the off chance of catching it, and it began to sing the second day I had it, so that I think it must have been brought up in a cage. It has moulted, and is now singing all day again. For food it likes mixed seed, and plenty of green stuff." At first sight your question looks a rare sort of puzzle. As it is, I can only think of one solution, which, however, I fancy is the right one. I believe you have caught an escaped Greenfinch-Canary Hybrid. If it be not so, then I am howled out. I believe there are a few fanciers down your way: why not get one of them to call and identify the welcome stranger? I have known of several Mules escaping from captivity and being some considerable time afterwards captured.

Rearing a Green Woodpecker.

Can I rear a young Green Woodpecker? I know of a nest, and if I can I will take one, but do not want to do so if it be impossible to feed them.—A. RUTTER.

A. Rutter.—Green Woodpeckers can certainly be hand-reared. They are not good birds to commence on however; some experience with other species is desirable before tackling them. Use the mixture of egg, biscuit, and ants' eggs, moistened with milk, recommended "D.D.C." this week; while for general instructions concerning hand-feeding, peruse the many answers I have given on the subject in the last few issues. In addition to the above stock food, the bird will require plenty of mealworms, cut in two and dipped in milk before being offered; also give any flies, grubs, smooth caterpillars, small beetles, and the like that you can lay hands on. A little finely-scraped raw lean meat should be mixed amongst the food now and again, while it is advisable to give some finely-minced green food (say lettuce), too. The latter should also be given amongst its stock food when feeding itself, the said food comprising a first-class insectivorous mixture of the usual type—see reply to "Flycatcher" last week, or purchase it through one of the advertisers using our columns. A few sunflower seeds and cracked nuts will also be eaten with relish, when adult.

Management of Young Mules.

I expect some Linnet-Canaries to hatch out in a few days. Please tell me the proper food to give the young birds. Shall I leave the Linnet with the hen after the young are hatched?—CUISINE.

Cuisine.—Whether you have the Linnet with them must depend on his behaviour. Some make very excellent parents, tending the young quite as well as their mother. If your bird proves interfering, however, you must remove him. Give the hen, to feed with, canary and summer rape seeds, and lightly cracked hemp seed, with a little shelled sunflower and maw seeds. Offer seeding green foods, such as chickweed and shepherd's purse, freely—but strip off all coarse leaves. If you cannot get this, give young lettuce and watercress leaves—but not freely until the youngsters are three or four days old. She may also relish a little soaked rape. Don't give these things all at the same time, but offer them at various periods through the day—nothing like variety to induce hens to "rack" their babies. Egg-bread, made by well mixing two crushed Osborne biscuits (or equal quantity of stale bread crumbs) with the yolk of a hard-boiled (ten minutes) egg, must, of course, also be freely offered; mix in half the white, too, when the young are four or five days old. When the Mules commence to feed themselves it is a very mistaken policy to leave off soft food as "soon as possible." The egg should be gradually left out of their diet when they are three weeks old or so, but certainly not the soft food. Give bread and milk sop (or biscuit and milk), well sprinkled with maw seed, freely each day. In addition offer canary and maw seeds, soaked summer rape, and lightly cracked hemp. A few crushed sunflower seeds should also be thrown in daily, increasing the quantity as the birds get older, and gradually dropping the hemp; at this stage also gradually discontinue the milk sop and soaked seed, giving occasional feeds only. If colour-feeding, give the sweet pepper in egg cake, letting this take the place, of course, of the milk sop. A few groats occasionally are relished; but the above "menu" is full enough for all practical purposes. Some fanciers, I know, will not give young birds green stuff after they have taken them away from their parents. But this I consider a huge mistake. I don't believe, mind you, in stuffing them with lettuce, watercress, and the like. What they want, and what is extremely beneficial to them, and conducive to their successful rearing, is a free supply of the "seeding green foods," if I may use the term, meaning the seeding heads of chickweed, shepherd's purse, grass, groundsel, plantain, and the like, especially the two first-named. I have tested the matter many a time, and know that seeding sprays of shepherd's purse and chickweed cannot be beaten for young birds. Don't gather it off dusty roadsides; and strip off all large, coarse leaves.

A Bit of a Teaser.

Could you advise as to treatment of cock Linnet, whose legs seem to be no use whatever; the bird itself lies panting with its legs stretched out behind? It is being paired to a hen Canary.—A.F.H.

A.F.H.—Your query knocks me clean out at the first blow. It is seemingly so contradictory. How could you be pairing a Linnet to a Canary when it has no use in its legs? I presume it must be lying on the cage floor, for it could hardly remain on a perch with "its legs stretched out behind"—unless it be a sort of feathered Blondin. Severe inflammation of the bowels will cause a bird to lie panting about the cage; but if your bird were so ill as this would go to show, then you could hardly, I take it, be pairing him to a hen Canary. Has he injured the legs (or a leg) accidentally catching them in the wires, etc.? Pending further explanation, I can only advise you to steep the legs for a few minutes in an egg-cupful of hot, strong whisky and water, afterwards gently massaging them with some stimulating liniment, say Zam-buk. But you want to locate the nature of the trouble a little more accurately. If inflammation of the stomach, dip a piece of lint, or cotton wool, in the hot whisky and water, blow aside the feathers in the region of the abdomen, and lay it thereon, repeating the operation a time or two. Don't make the bird an unsightly and uncomfortable object, however, by unnecessarily wetting it.

A Mule-breeding Success.

I have succeeded in breeding some Goldfinch Mules, thanks to your advice. One is a light one, and very similar to the four-pointed Buff illustrated in CAGE BIRDS, June 15th. (1) Is the diet for young Mules the same as that for young Canaries? (2) Is the mother of the Mules (a large yellow Norwich) of any value for establishing a light muling strain? If so, what mate should I procure for her? (3) Is my light Mule of any value for show purposes? (4) What is the best green food for Goldie now dandelion heads are scarce?—SADDLER.

Saddler.—Delighted to hear of your success, my friend. (1) The diet for young Mules is something like that for young Canaries. But I am afraid I am a little broader-minded than the average Canary breeder in matters of diet, and use and advocate items which be himself would look on with suspicion—unjustifiably, in many instances, I feel sure. Note reply to "Cuisine" this week, and follow advice therein. (2) I should consider this a most valuable hen, personally, and I should mate her to a clear yellow Lancashire Plainhead next season for a nest or two. Get a bird from a good strain; pay a fair price for it. If you can't manage it, then get a big (not necessarily typical) clear, pink-eyed, yellow Yorkshire cock, bred from a clear strain; buy from a breeder on whose word you can rely. (3) If your young Mule is even-marked, it is certainly valuable, providing it turns out a male. It ought to be a beauty for colour, coming from a yellow hen—hen Mules coming from such a mother, by-the-bye, are often good in colour, and, consequently, very fair show birds. If your youngster is not even-marked, but more or less variegated, its value will depend largely on its size, shape, and colour, and, of course, the extent of the variegation. Colour-feed it, by all means (see reply to J. Mackie this week). (4) Now dandelion heads are going (or gone) the best thing for Master Goldie is ripe, seeding groundsel. You will be able to get hard-heads in plenty very shortly—likewise various thistles.

About a Nest and the Young.

Please give name of nest I found, and say if possible to rear young under Canaries. It is built on the flat ground, among long grass, away from any bushes, and is made entirely of dried grass. Six eggs in all, a little smaller than a Canary's. Colour dark fawn, mottled with still darker fawn, and varying to lighter fawn at the narrow end.—TOLLCROSS.

Tollcross.—Your nest is not likely to be that of the Skylark, for the clutch of this species rarely exceeds five eggs. I have never found more than five eggs in a Skylark's nest, and have never met anyone who has; but isolated instances of six have, I believe I am correct in saying, been discovered and put on record. I should say the nest you have hit on is that of the Meadow Pipit. There is one discrepancy, however; a Pipit's nest is usually lined with hair; a Skylark's rarely so. The eggs of the former are slightly smaller; the size and colouring you describe answers to them, but all Lark and Pipit eggs vary to an almost inconceivable extent in the latter respect. You will not succeed in rearing young Meadow Pipits (insectivorous birds) under Canaries, I am afraid. They are not difficult to hand-rear, fed as advised "D.D.C." this week.

All About Jays.

(1) Have reared a nest of Jays. They can fly. What food would you advise for them? (2) Three out of four have developed cramp in the feet and the knee joint. What treatment will effect a permanent cure? (3) What is the cause of the cramp? They have a fair-sized cage, and have had sawdust on the bottom. Would sawdust be too heating for the feet? (4) Is it necessary to cut their tongues before they will talk?—A.D.C.

A.D.C.—(1) It is not a difficult matter to keep a Jay in health, providing he is kept very clean, housed in a very big cage, and well fed. See the perches are of suitable thickness (about like a broom handle), varying them a little in size, and give the bird a long jump from top to bottom of cage. When quite tame, let him out for brief excursions in the house (not necessarily in the drawing room). The best and cheapest way to feed is to utilise table scraps largely. As a stock food, you could use broken-up dog biscuits or puppy cakes or "Melox" (or game meal), with coarse crissel—say two parts of either of the former to one part of the latter (by measure). Moisten with hot water, giving it crumbly moist, and mixing with it table scraps, cooked meat, and potatoes, greens, gravy, etc. Give a few trapped mice, young Sparrows and the like (even young frogs, if you can capture them), but not over much raw meat. You will find them very accommodating in the matter of food. Eggs (raw and cooked), acorns, beechmast, nuts (cracked) of various kinds, peas, berries, fruit, worms, beetles, grubs, and butter are other things they will eat. See one or two other replies this week on Ravens, Magpies, etc. (2) Steep the feet and legs for a short time in fairly hot, strong whisky and water. Afterwards massage them gently with some stimulating liniment—such as Elliman's, or Zam-buk. Put some Parrish's Chemical Food in their drinking water for a week or so, in the ratio of one teaspoonful of the former to every two tablespoonfuls of the latter. (3) Unsuitable feeding, absence of opportunity for exercise, unsuitable perches, and several other things may contribute to produce cramp. You might note reply to an enquirer on Skylarks this week. I don't suppose sawdust would affect the feet one way or another. Peat moss litter, however, is the best and most economical covering for the cages of large birds such as Jays. (4) To cut the tongues of birds of any kind is a barbarous and unnecessary act, and anyone perpetrating such cruelty ought to get a month to think it over, without the option of a fine. Cutting the tongue does not assist any bird to talk, for birds do not talk with their tongues. I thought everyone knew that by now.

Treatment of Young Magpie.

Please inform me how to feed a young Magpie about three weeks old, also how to feed later on to keep it in good condition, and what kind of cage to use for it. Would a tin bottom be too cold for it? Will it disturb breeding Canaries? What use is a Magpie, as I presume they do not sing? Do they talk, and how do you teach them.—T. A. BURGESS.

T. A. Burgess.—I gave full instructions for feeding the young of such large birds as Jackdaws, Magpies, etc., only the other week (June 15th, reply to "W.R.A.") and must ask you to please refer back thereto. It is quite impossible to keep repeating the same answer week after week. Briefly, scald and mash some puppy biscuits, and mix with same finely-chopped hard-boiled egg—one part of the latter to three of the former. Give him also mealworms, and smallish garden worms cut into suitable pieces; occasionally also give some raw lean beef or mutton, or rabbit flesh, or cooked tripe, etc., cut into tiny pieces. Feed when adult on the lines recommended "A.D.C." this week. A Magpie is hardly suitable for a cage, unless it be an exceedingly big one; he looks and does better in a small aviary. A pianoforte packing case I have seen transformed into an excellent place for a Magpie, Jay, etc. Very thick perches are needed (broom handles, for instance). A tin bottom would not be too cold if kept thickly covered with peat moss litter. I certainly should not myself dream of keeping a Magpie among breeding Canaries—if he got at them at any time he'd probably try to make a meal of them. I don't know what you mean by "what use"—what use are most other birds except as pets? And a Magpie, properly treated, makes a grand pet. Of course they don't sing; but they talk and mimic very amusingly. Repeat short, catchy sentences to the bird, until he picks them up.

Wanted—The Owner's Name.

One evening I came across a nest, and would like you to tell me what kind it is. The bird is the size of a Sparrow, very stout, broad tail, same on the back as a Linnet, same on the breast as a Thrush (meaning colour and marking). Its nest is in a grass banking, and has four pink eggs. I should like to take the young. Would this food rear them:—Grated carrot, rice biscuit, put through sieve, yolk of hard-boiled egg, and one or two boiled white snails chopped up and mixed. Is it a valuable bird?—D.D.C.

D.D.C.—From your excellent attempt at describing the owner of the nest, I have little hesitation in saying it belongs to a Tree Pipit. True, your description would answer equally well for the Meadow Pipit, but the pink tint of the eggs is a peculiarity of those of the other Pipit; the latter's nest, too, is built nearer cover, the Meadow liking a more open spot, as a rule. The Corn Bunting may also be said to answer to your description, but the eggs in this case would be very heavily marked with thick zig-zag lines of purplish-brown (almost black); the unmistakable hall-mark of the Bunting tribe. Tree Pipits have no great value, but make very nice, gentle, affectionate pets, and the males have an agreeable song. The food you mention would no doubt rear the young all right, though I should substitute maizena wafers, say, for the rice biscuits. Have had no experience of the latter. You would need to chop the snails up quite small. As the birds grow, mix a little finely-minced green food (such as young, tender lettuce leaves) amongst the stock food. I should certainly give a few cut-up mealworms as well; also all the flies, etc., you can get. For the rest, follow the general directions set out at length in two or three answers last week (to say nothing of other recent issues)—"E. Moss," "Sambo," "Flycatcher," for instance. The mixture mentioned therein would, too, be probably the best for the hand-feeding.

Tabloid Advice.

Delay (Anthill).—I regret the delay in answering your query, which I unfortunately mislaid amongst a hundle of my papers.

Shepherd's Purse (Boh).—The sample you send is shepherd's purse. It is a very good sample, too. But you want to gather it in a more ripened condition, if you can find such—viz., with both seed-pods and seeds of a rich golden brown, or reddish brown colour. Still, it is good to give at any stage of growth.

Gold of Pleasure (E.E.).—The sample you send is not gold of pleasure. The latter resembles shepherd's purse in the manner of carrying its seed-pods, which, however, are round instead of heart-shaped; its tiny flowers are also carried at the top, but are yellow. The leaves are shaped like an arrow-head, and grow abruptly from the stem.

Dead Chaffinch (G. Little).—It does not come within my province to tell the cause of death of birds. Read the rules for post mortem examinations, and send all corpses direct to Mr. J. North. I can only say that the bird received seemed very emaciated, and was in a poor condition of plumage. Possibly your diet is not sufficiently varied, or generous enough in the matter of insectile food.

Ivy in an Aviary (C. Harrison).—I never found ivy injurious to any bird; neither do I think you yourself will do so. I certainly should not pull down that covering the walls you purpose enclosing. It will make invaluable cover for your birds; while in addition to utility it has the recommendation of adding considerably to the beauty of an aviary. Put up a sufficiency of perches, of course.

Shepherd's Purse (R.C.).—You have hit on the right weed; the sample sent is shepherd's purse. Thanks for your good offices on behalf of CAGE BIRDS.

Goldfinch's Peculiar Behaviour (Constant Reader).—The case of your Goldfinch, as described by you, is quite outside my own experience, and I am quite unable to advise a system of treatment with any confidence. Evidently the bird must suffer considerably, and I should feel strongly tempted to

put it out of its misery. If, as you say, pining away, it cannot last much longer. You might try 2 or 3 drops (not more) of a ten per cent. solution of potassium bromide, given direct into the beak twice daily, for a time, for the fits. But this can hardly help him, if very thin and weak.

Shepherd's Purse (A.C.W., S.T., J.H.H.).—Sample of shepherd's purse has been duly sent to you.

Sexing Young Chaffinches (C. Farrow).—All young Chaffinches resemble the female Chaffie until the moult, when the males assume their distinctive adult garb. It is difficult for one unused to the species to sex the youngsters, but a keen, practised eye can generally spot them, for they usually look denser and richer in colour on breast and flanks (tinged with red, as it were). Some say they also carry more white in the wings; this is correct in the sense that the white thereabouts looks purer in the male than the female.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Quails and Parrakeets.

Would a pair of Common Quails agree with Rosellas and Budgerigars and breed? What is their food and treatment?—H.P.

H.P.—Yes, they would agree with the Parrakeets, and breed if they had tall grass to run into, or a pile of brushwood in one corner under which they would find the necessary retirement for their nest. Supply almost any kind of small corn, wild seeds, canary, rape, and millet, a little game meal, ants' eggs, lawn clippings, and garden weeds as green food, and any live bait the garden will supply. If you pile the brushwood up in one corner, and one or two peasticks are pushed right through the mass in two or three places, this will keep it intact for a whole season. For sanitary reasons it should be replaced annually.

What Parrot?

Can you tell me name of my bird from description herewith? I have had it three days, and am feeding on Parrot mixture; must I give anything else? What is its value?—THIRTY.

Thirty.—It is the Rose-breasted Cockatoo (*Cacatua roseicapilla*). Diet: Canary, oats, wheat, dari, hemp, Indian corn, and sunflower seed in equal parts; ripe fruit, plain biscuit, green food, nuts, crust of household bread, with regular supplies of grit, cuttlefish, and water for drinking and bathing. This is a freely imported species, and frequently offered for 7/6 or even lower, but an acclimatised and talking bird would be worth much more. It is a hardy species, and once over the hardships of importation, it is enduring and long-lived, if not subjected to draught and suitably fed. Do not give tea, coffee, or milk slops, or table scraps of any kind.

Small Parrot or Parrakeet.

I want a small Parrot or Parrakeet that would learn to speak a few words, easily tamed, bright coloured, and one that would interest a young girl. What kind do you recommend?—J.Z.G.

J.Z.G.—I am rather at a loss what to recommend for your purpose, individuals of the same species vary to such an extent that it would really be much the safer plan to pay a visit to some dealer advertising finger tame pets for sale, and choose one that could speak a few words, and that would come not merely on the dealer's finger but on yours as well. The Tovi Parrakeet makes a nice pet, but it is not a talking species. However, I have heard of at least one that spoke a few words; it is small, grass green in colour, with an orange spot on the chin, and a stripe of yellow on the wing. A friend had a pair of this species which followed him about, and would settle on his head and shoulders; there is no doubt about it being a confiding pet once it has become accustomed to its owner. However, the same may be said as to the smaller Ring-necked Parrakeets, which make good talkers, but unless they have been properly tamed they are good biters too. Most of the fluent talkers are rather large birds. The Senegal is a handsome Parrot, but you must for such a purpose purchase a tame one. They are very variable in this respect. The Plum or Blossom-headed is another brilliant bird, but they do not all make talkers, as also is the Rose-ringed Parrakeet (*Palæornis docilis*), but neither of these are very small. The Lovebirds are smaller, but they don't talk. I should recommend the Tovi, or, if talking is not imperative, I may be able to suggest another.

Grey Parrot with Fits.

My bird is a splendid talker, but troubled with fits. What is the remedy?—GOODMAN.

Goodman.—You give no details as to how you are dieting the bird, but if you look up last week's "C.B." you will find the correct diet given; bring your birds' diet into line. Dissolve 5 grains of bromide of potassium in a little syrup, and give this direct to the mouth; give this once a day for two or three days, and afterwards, if the bird's bowels are at all stiff, put one teaspoonful of Dinneford's Magnesia in its drinking water for one day only. If you notice at any future time any signs of a recurrence of the fits, promptly give a dose of the bromide of potassium, which will probably avert it. The bird should be kept quiet for a time, and neither excited or alarmed, its cage kept very clean, and a continuous supply of water in the cage. It should be kept in a well-ventilated position, but at the same time quite free from draught. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food whatever. Repeat query in a fortnight's time, giving full details.

Green Parrot Retching.

(1) I am told it is a Red-fronted Amazon. (2) What sort of talkers do they make? (3) I have given Dinneford's Magnesia. Can you give me a remedy?—AMATURE.

Amature.—(1) Cannot you give me a fuller description of the plumage of your bird? I cannot definitely name it for you from the meagre details given. (2) Most of the Amazons make fair talkers and mimics, but they take more teaching, and their articulation is not quite so clear as a rule. (3) Are you sure this is an actual sickness, as many species of Parrots disgorge the partially digested food from the crop and re-eat same; this often takes place when they are being fondled, and is accompanied by a jerking and shaking, more particularly of the neck; this at times is done so energetically as to bring the food up altogether. Remove the bird's water overnight, and the next morning dissolve five grains of sulphate of soda in two tablespoonfuls of water, and let it have nothing else to drink till it has taken the whole. Give this for a few days, and note the result. Add to your seed mixture one part each dari, oats, hemp, and Indian corn; also give ripe fruit daily and a little green food, such as lettuce, green peas, etc., as in season. Monkey nuts will do no harm, but bazel or walnuts are better. Keep a piece of cuttlefish in the cage. If there is no improvement, repeat query a fortnight hence.

Parrot Eating its Excreta.

The bird has a good appetite; its food embraces almost everything except animal food.—DICKEY SAM.

Dickey Sam.—The bird has presumably picked up this objectionable habit during importation, owing to the unclean conditions in which they are kept. Almost the only thing to do is to wire over the grating with small netting, so that the bird cannot get at its excreta, and at the same time promptly clean away anything that adheres to the grating, etc. It is bad practice to have a diet which embraces almost everything, even though it does not contain animal food (?). Look through our recent issues, and bring your diet into line with that recommended in this column. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food whatever. Keep up a good supply of such ripe fruit as it will eat, according to the season. I should advise you to keep the netting over the grating (keep it very clean, too) for some considerable period, as this habit, once formed, is somewhat difficult to eradicate.

Breeding Zebra Finches.

Will these birds breed in captivity? What is their treatment?—R.R.C.A.

R.R.C.A.—Yes, these interesting and confiding little birds breed freely in captivity, either in cage or aviary. Their treatment is very simple—a roomy cage, or outdoor aviary, strict attention to cleanliness, and sweet and wholesome food. Diet: Canary, white and spray millet, green food, such as grass in flower, lettuce, and any non-poisonous garden weeds; grit, cuttlefish, and a regular supply of water for drinking and bathing. When they have young to feed a little of some good soft food mixture must be supplied. As regards nesting accommodation, hang a husk at one end of the cage and a Hartz travelling cage at the other; you must take out the fittings from the latter, and also one or two of the bars must be cut away that the birds may have ingress and egress. Hay and long grass will be all they will require for nesting material. First bake and then crush the egg shells left from your table, and mingle same with their sand.

Budgerigars not Rearing Young.

My birds have reared two broods, but with the third left off feeding when they were three weeks old. Can you suggest a reason and give remedy? —J. SMITH.

J. Smith.—I am rather at a loss to account for the mishap that has overtaken your young birds. I can only assume that the hen has gone amiss; but under the hygienic conditions of your aviary she should soon recover condition again, when I shall be much surprised if you are troubled with any recurrence of the disaster. I should supply as much grass in flower as the birds will eat, as well as the other green food. The green food you name would not give rise to the catastrophe. If the old birds do not clean out the husks, it would be as well to have a spare one or two, when you could do this yourself and leave the cleaned husks exposed to sun and atmosphere for a few days. Have mice found access to the husks? This would very probably cause the hen to desert the young. However, if there is any repetition of it, I should get rid of the hen, as with every species bad feeders and unnatural parents turn up occasionally.

Ring-neck Pulling its Feathers.

My bird has pulled all the feathers off its body, and its skin has a scurvy appearance. What is the remedy?—NO NAME.

No Name.—You say nothing as to how you are keeping and feeding the bird. In very many cases of feather-pulling an unwholesome diet is the cause, and I incline to the opinion that this is the case with your bird. If you will repeat query, and state how you are feeding, I shall be in a better position to help you. In the meantime, for one day, give your bird in its drinking water, one teaspoonful of Dinneford's Magnesia; follow this by well colouring the drinking water with Parrish's Chemical Food; also soak a stale crust of household bread in clean water, squeeze it all but dry, and then well dust with flour or flowers of sulphur. Into the dry parts of skin rub in a little clean vaseline, but not sufficient to make it really greasy, merely sufficient to soften the skin a little.

Grey Parrot Dying.

Bird died last week from inflammation of the liver. I fed it according to directions on boiled maize, bread damped in tea, Parrot mixture, rice pudding, and currants, and occasionally the top of a boiled egg. (1) Did I give her suitable food? (2) Are enclosed quills healthy? (3) Have I now any claim on the dealer?—NOVICE.

Novice.—(1) No, a worse diet could not have been given, and I'm not at all surprised at the result, neither at the fact of its suffering from chronic inflammation of the liver, if it had been fed in the same way before it came into your possession. Almost weekly I state in this column, re Grey Parrots: Do not give tea, coffee, or milk slops, table scraps or any kind of animal food whatever. If you peruse this column for last two issues, you will see that the diet you have given is just the opposite of what I advise. (2) The enclosed quills are not fully developed, otherwise they are about normal. (3) As to this, it is really outside my province. It all depends on the wording of the guarantee. I should advise you to get a legal opinion on the matter.

Birds for Cages.

(1) How many of the smaller birds could I keep in a cage 3 by 1 by 2½ ft. high? (2) The same for a cage 3 by 1 by 1½ ft. high? (3) What kind, what price, and what sex? Could I breed more than one pair of Zebra Finches in a cage 3 by 1 by 1½ ft. high? (5) My pair of Budgerigars are not breeding, the cock is rather puffed out. What can I do for them?—M.J.

M.J.—(1, 2) Six in either cage. (3) Confine one cage to Waxbills, and here you could have eight birds, and with these it would be best to have them in pairs, say one pair each Zebra or Golden-breasted and Orange-cheeked Waxbills and Common and Green Avadavats, 3/6 to 4/6 a pair. In the other put males only, say Green Singing Finch, Alario Finch, Gouldian Finch, Silverbill, Long-tailed Grass-finch, and a Rufous-tailed Finch; cost, 5/6, 7/6, 10/6, 2/-, 6/-, and 6/6 respectively. (4) No, it is not safe to attempt breeding in cages with more than one pair of any species. (5) The cock is evidently out of condition. Make their drinking water saline with Epsom Salts for one day, and then put them on a course of Parrish's Chemical Food for a fortnight or longer. Give them as much grass in flower as they will eat, also cuttlefish. A single pair of these birds takes longer usually to settle down to breeding than when two or three pairs are kept together (see other replies on Budgerigars). When your birds are in condition again they will ultimately settle down to breeding. You cannot hasten matters.

Foreign Bird Queries continued on p. 565.

CORRESPONDENCE.

SWEATING HENS.

The Cause, and a Cure.

SIR,—As sweating hens have been my bane, I set myself to work this season to try and find out the cause. The two previous seasons I had lost a great many youngsters through this sweating, and last year especially I lost a great many. The first round last season I was practically clear of it, and reared over 20 youngsters; but after that I only reared one nest of five. Every other nest was lost through the hens sweating and, as a consequence, being unable to feed their young, for I found that two or three days after the first sign of moisture showed on the hen's breast she gave up feeding entirely. I was considerably disheartened with this, as I had bought some good stock and was anxious to breed some good birds from them. I sought out all the older fanciers I then knew, asked their advice, but still to no purpose. One advised withholding all green food, another to give more green food; others suggested that perhaps the food was stale, but this could not be, as I was most particular that the soft food was never put into the same vessel until it had been thoroughly washed. The food itself I made three times a day. I also regulated the seed diet according to each new idea. When this failed I sought expert advice, taking advantage of your query columns; but as the season was then far advanced, I could not fairly put the advice then obtained to the test. But the few hens I had to finish off with all went the same way. From this I considered either that the hens were constitutionally weak or that there must have been an error in my diet. As the hens were bought from different sources, they could not all be weak, and my diet had been varied according as each fancier had suggested. This year my first hen commenced to sweat when the young were about five days old, so I thought here is my old luck back again—no young this year! Well, it will have to be my last try. But I had standing in my bird room a bottle of Epsom salts in solution, so I thought I would try its effect. I did so, and, it being Saturday, I went to the bird market, knowing well I should see some birdy friends there. The first I met were Mr. Duke (Sec. Shields C.B.S.) and Mr. J. Thompson. I told my tale of woe to them, and asked them if they knew a cure for sweating hens, and together they answered, "Epsom salts." This was the first time it had been advised, and I have used it continuously this season; and, thanks to it and egg food, in the proportion of two parts egg to one biscuit, I have now a hundred healthy youngsters doing well. I consider the reason of hens sweating is that during the period of incubation the body temperature is higher than at other times; then, when the hen commences to feed her young, she is given rich egg food, which, being of a highly nitrogenous nature, tends to raise the temperature. Then, as the hen swallows much more than is needed for her young, it goes to produce a still higher temperature, and at the same time clogs up the liver, making the hen dull and sleepy. The effect which salts has on such a hen is to increase the action of the bowels, stimulate the liver and cool the system; thus, within two days, all trace of moisture is removed from the breast feathers, and the hen becomes an ideal mother once again. The method I have in which to give the salts is this: One ounce of salts is dissolved in an eight-ounce medicine bottle; of this solution give about quarter to half (according to the severity of the case) in the drinking vessel, filling up the glass with plain water. Those hens which have commenced to sweat have always yielded to this treatment. T. C. CRAWHALL.

THE YORKSHIRE CANARY CLUB.

SIR,—We desire to call the attention of members and Yorkshire Canary fanciers generally to the change of officers and committee for the year 1907-8, as published in your issue of June 14th, and to ask for the support of all interested in the Yorkshire Canary to make the above club a greater success in the future, by an increased membership from inside Yorkshire. The Y.C.C. has now many worthy rivals (whom we heartily welcome and wish every success), and from this fact we anticipate a slightly lessened membership outside our county; but with greater interest among Yorkshire fanciers this can be easily overcome. The subscription is exceedingly low—2s. 6d. per annum—and, considering the value and number of trophies and money specials put up for competition, it behoves all interested in the Yorkshire bird to become members of the Y.C.C. The new year commences on July 1st. We appeal to such subscribers who have, through oversight, neglected to send in their subscriptions for 1906-7 to forward same at once, along with a renewal for the forthcoming season, to the Secretary, as below. We regret to have lost the services of Mr. W. Mundell as Secretary; but we still retain his personal influence. Our committee are desirous of alloting the club's patronage as early as possible, and ask any society desiring it to make application at once. Will all club secretaries and fanciers please note the name and address of the new Secretary, to whom all correspondence must be sent. On behalf of Y.C.C. D. SUNDERLAND, Chairman.
JOHN GREAVES, Secretary.
279, Hollings Road, Bradford, Yorks.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

CUPS FOR THE WELSH C.B.C.

SIR,—I am delighted to inform members that we have three cups and a teapot given for competition amongst the members of the above club. Mr. J. Sandiford offers a £2 2s. challenge cup for the most points gained by birds fed upon his Royal Red Feed (Canary section of the club); Messrs. R. Hyde and Co. also offer a teapot, value 25s., for the most points gained by birds fed upon their foods; it is confined to those who have not won more than two of their specials prior to the commencement of the coming show season. Then we have the two Leech cups, one given for the Canary section, and the other for the remaining part of the Fancy. These are all given independently of the club medals. If any fancier or firm feel that they would like to help the club in any way, we shall be glad of their support, financially or otherwise. I should be glad to hear from any person who is willing to join the club; the subscription is only 2s. 6d. per year, payable in advance. The club is better able to give inducements, as is shown above, than it has ever before, so come along and help us to do far more than we are now doing. Unity is strength. We want every fancier in Wales to join the only Welsh club, and make it a power in the Principality. Will show societies that require our patronage this coming season drop me a line at once?

D. H. TEDSTONE.

4, George Street, Brecon.

WATFORD C.B.S. AND RULE 17.

SIR,—In replying to Mr. R. J. Pretty, I would say that with this letter, as far as I am concerned, this correspondence closes, as it is evident that Mr. Pretty's favourite way is to make certain statements in one place and contradict them in another, and such cannot either interest or benefit your readers. Mr. P. now denies that Mr. Lythgoe gave him and others permission to exhibit at the West Herts Fanciers' Association Open Show in December last. Whether Mr. Lythgoe did so or not, I can't say; but Mr. P. certainly said he did at the general meeting here. Mr. Pretty next says that the other members I referred to were not allowed to exhibit, and made their entries under the impression that a licence had been applied for. "What blissful ignorance!" We will turn to page 548, last week's CAGE BIRDS, and just glance through Mr. Pretty's letter to Mr. Lythgoe, dated November 27th, 1906, in which Mr. P. says:—"On going to Watford I met Mr. Edwards (Secretary of West Herts Fanciers' Association), and asked him if a licence had been applied for, as, if not, I could not exhibit, and a member of his committee was in the same boat. This committeeman hereupon said he should show. I (Mr. Pretty) said I dare not, even if I wanted to, as others had been warned about it, and advised him to look up last week's papers and see for himself." Now, Pretty, this really is too fuuny. You advise a man he must not show unless his society applies to the C.B.U. for a licence. This man turns round and says, "I shall show"; and you now plead it was done in ignorance, under the impression that this show, the W.H.F.A. had applied to the C.B.U. for a licence. "What a farce!"—a committeeman not knowing if his society had applied for this licence or not, more especially as it directly concerned him. True, indeed, is the saying "that where ignorance is bliss it's folly to be wise." Mr. Pretty was, I believe, the chief instigator in trying to persuade the W.H.F.A. to apply to the C.B.U. for a licence, and himself offered to take the responsibility as to the fee, etc., and yet he now pleads that he and others were not aware up to the last minute that this licence had not been applied for. Would not one have thought that, after going so far as to be responsible for the fee, etc., for this licence, he would naturally have seen or written Mr. Edwards as to whether this licence had been applied for or not before making his entries? His apathy at the final stage must have indeed been great. Truly there are some things which passeth all understanding. Now, Mr. Pretty next says that the members I mention were not allowed to exhibit. Well, Mr. P., they did exhibit, and you were well aware of the fact. Nevertheless, you, who occupy a seat in the great tribunal of the C.B.U., shut your eyes to the fact and allowed it to pass unnoticed; therefore I maintain I am quite correct in saying they were allowed to show. Next, with reference to the committee of the Watford Cage Bird Society voting in favour of Rule 17 remaining as at present, this matter was left over at the adjourned general meeting, and it was right and proper that another general meeting be called, so that every member so disposed might vote on this important question. Mr. P. makes the excuse that there was not time, as voting on Rule 17 closed on the following Saturday. Why should not a general meeting have been called on the same night as the committee meeting, instead of the latter, to settle this question? Was it feared that the members might turn up in force, instead of only about 18, as on the last general meeting? Lastly, it's an untruth for Mr. Pretty to say I resigned because nobody backed up my objection. I resigned because I chose to remain unfettered and free, and not to be dictated to by anybody as to where I may or may not exhibit (see latter portion Rule 17). As to being narrow-minded, I cannot help thinking this term applies more to Mr. Pretty, as no broad-minded person would ever criticise anyone for resigning from that of which they did not approve. This matter, as far as I am concerned, is now ended, and any reply which Mr. Pretty may make I leave the readers of CAGE BIRDS to form their own opinion of.

THE MEMBER WHO RESIGNED.

NESTING DIARRHŒA.

A Remedy Required.

SIR,—Could any fancier give me a remedy to stop my hens getting nesting diarrhœa? They feed young for a few days, then give over. I give green food from three days, and eggs and biscuit. I leave cocks with hens. I shall be greatly obliged for any information.

ANXIOUS.

GULLS NESTING IN LONDON.

SIR,—I don't know if the following is stale news to your readers, but it seemed rather interesting to me. For some time I have been watching a pair of Gulls in St. James's Park, where the hen has been sitting on a rock in a quiet part of the lake; and last Wednesday (19th inst.), after lunch, I took a walk down to the park to see how she was getting on, and was delighted to find that she had two youngsters. I have been down since, and could only see one. Whether the other was lying close to the rock, or had perished, I do not know, but hope they will do well. Is it not rather uncommon for Gulls to nest in captivity, as they are both pinioned birds?

F. J. DAY.

NORWICH PLAINHEAD CLUB FOR TYNESIDE.

Yet Another Specialist Club!

SIR,—A well-attended meeting was held at Lockhart's Cafe, Grainger Street, Newcastle-on-Tyne, on Wednesday, June 19th, in connection with the proposed N.P.C. for Newcastle. Mr. Crawhall was elected Chairman, pro tem. At the commencement I was asked to give my views on the subject, which I did as best I could; but, not being an eloquent speaker, of course what I had to say ended with a few remarks concerning the Norwich Plainhead. Mr. Curry proposed, and Mr. Storey seconded, that we form a Norwich Plainhead club, and the proposition was carried unanimously. Next came the name the club should be known by. This point started a very interesting discussion, as there were no less than six different names put forward. Eventually it was carried unanimously that this club be known by the name stated above. The annual subscription was settled at 2s. 6d. I will notify all members, through your valuable paper, when and where our next meeting will be held. A hearty vote of thanks to our worthy chairman and your humble servant ended a most enjoyable evening.

L. STONE, Sec. pro tem.

PARASITES ON CANARIES, etc.

SIR,—Part of my letter in answer to Mr. Allen was omitted. It referred to insect powder, and read as follows:—"Insect powder will kill all the grey lice that are moving on a bird while Mr. A. is getting his washing tackle ready," and so it will. I notice Mr. A. has made another wonderful discovery—the grey Canary louse on Larks! What next? Most birds have their own parasites.

FRED PROCTOR.

Mr. Allen's Method.

SIR,—In answer to Mr. Haddow, I have not had any birds to wash for local fanciers, neither have same been offered by them. But I have obtained one this last week that has a few grey lice on it. This bird I shall wash on Sunday afternoon, June 30th, about 2 o'clock. Anyone interested in the matter may come and see the result for themselves. I shall invite one or two local fanciers, so perhaps you may get someone else's opinion on this method besides my own. I have every confidence in the way I advise, and I think if it was properly known most fanciers would say good-bye to quassia and powder. I will tell you how the last five are that I washed about eight weeks ago, which will show whether it clears them, or not, at once. These birds have not a single parasite on them, and are all breeding and perfectly healthy, and neither of them has been sprayed or had a bath since. How's that for quickly clearing them? Not half-a-dozen applications. And where are those eggs that someone said would hatch afterwards? I think their time is long since up. More clears, eh? About Mr. H.'s cutting—it is the same method that has been recommended as long as I can remember; the same old style—too much trouble, and not very effective, either, when you have done it all. And it is not practicable for use in a room in which a large stock of birds is kept—where the parasites are well established, it would not clear a room in a year. Allow me, Mr. Editor, to give my method again. Wash the bird by hand, and in the last water put two teaspoonfuls of Jeyes' Fluid to a quart of water. Rinse the bird in this, and dry as usual. It may be used same strength for spraying the birds, or a drop or two be put in the bath; it will be found very effective this way. I prefer to hand-wash them, as I think it quicker and more certain. To clear cages of red mite, they should be sprayed weekly for a time, inside and outside, with the Fluid, a little stronger than what is required for washing or spraying. The birds need not be removed from the cages at all. This will conclude this correspondence, as far as I am concerned. Someone who has tried it may shortly give his opinion on my method. I know it has interested many, as I have answered 34 letters by post asking for further information. The Jeyes' Fluid can be obtained at any chemist's shop. If he does not stock Jeyes', ask him for a similar liquid disinfectant. Tell him what it is for, and he will give you some other brand that is not a poison, and will do its work as well. I may, after moulting time is over, give your readers some more results from further experiments I am making, and shall then perhaps be able to tell them something new on another branch of the Fancy.

R. ALLEN.

146, Blackburn Road, Bolton.

ALBINO STARLINGS AT RADFORD.

SIR,—On June 5th I saw three young white Starlings, with pink eyes, yellow beaks, and white legs, caught at Radford Woodhouse. I also saw a Starling with a white tail, which I believe to be one of the parents. I have a Blackbird with white cheeks and ring round neck, which made him look headless when flying.

F. LENTANCE.

WHAT'S IN A NAME?

A Defence of the Nom-de-plume.

SIR,—May I ask Mr. Crisp, Mr. Greeves and others how the disclosure or otherwise of the identity of "A Country Member" affects the soundness of his arguments, and why it should be considered so necessary for a correspondent to sign his name? Surely an argument is not less sound, or an opinion (if couched in fair terms) less entitled to respect, when appearing over a nom-de-plume, than if written above the full name of the contributor—whether that contributor be either a town or a country member? Is the desire to become acquainted with the identity of the writer simply and solely to ascertain his bona fides? Mr. Crisp, in his letter, says:—

> "It is well to remember that we all have a perfect right to our views, and, provided they are not offensively expressed, should be treated with reasonable respect"—

a statement with which any fair-minded fancier will heartily agree. But mark your own utterance well, Mr. Crisp! Read your own communication carefully through again, and consider whether the scarcely complimentary innuendo contained in it with regard to "A Country Member" squares with the precept you have so aptly expressed. Moreover, Mr. Crisp says he is "sorry to see Messrs. Tyson and Greeves being drawn by him" ("A Country Member"), and yet "A Country Member" has apparently succeeded in drawing Mr. Crisp also; so that we have the amusing spectacle of Mr. Crisp bewailing in others that which he is himself also guilty of! But perhaps—

> "That in the Captain's but a choleric word
> Which in the soldier is flat blasphemy"?

The thin veneer of opposition to Rule 17 does not blind the fancier of average intelligence to the actual attitude of many in the district of London and its immediate suburbs towards the C.B.U.; and in spite of their "high falutin'" talk of freedom, and "the perfect right to our views," etc., that right is apparently not to be extended to the unfortunate Executive, who, judging from the tenor of much that has been written and said, are not to be entitled to express any view at all! I have been sufficiently long in the Fancy to know that there is an urgent need for the Cage Bird Union, and a wide sphere of usefulness open to it; also that it is only necessary for one section of the Fancy to propound a scheme—no matter how good it may be—to ensure its immediate opposition by the leaders of the other section. "The greatest good of the greatest number" appears to be out of the question with them, and, to me, it is one of the least attractive aspects of the Fancy. We are bound, and rightly bound, by rules and laws on every side—by rules of the road, by laws relating to public health, by liabilities to those in service under us, and by laws relating to the person and to property. Turn where we will, we are confronted by laws and regulations (even our wild birds are protected by them). Yet the law is of terror to the evil doer only. Surely in the cage bird Fancy it is not too much to ask that there shall be a controlling body who shall be able to say to the fancier: "You shall show fairly and honestly, and, to ensure that you do so, you shall exhibit only at shows amenable to us and to our rules, for the good of the Fancy generally"?

W. N. MIDGLEY.

P.S.—To prevent any possible misconception, it is perhaps advisable for me to say that, so far as I am aware, I have no acquaintance with "A Country Member" (or "Observer") and am in no way responsible for the communications so signed.

A Green Crest-bred Canary.

THE CAGE BIRD UNION RULES.

SIR—Rule 17 having been fully discussed and dealt with, I think exhibitors and affiliated societies would do well to turn their attention to Rule 19 of the Cage Bird Union rules, which reads as follows:—

19.—The Executive Council of the Union shall be the final court of appeal or umpire in all questions or disputes of any nature whatsoever arising in connection with cage birds, and concerning the interpretation of these rules, and any matters arising thereunder; and all societies affiliated and every registered member thereof shall, by reason of membership of the Union, be deemed to agree to refer any dispute which may arise to such Executive Council, and such reference shall in all cases be deemed to be a reference under the provisions of the Arbitration Act, 1889, or any subsisting statutory modification thereof.

Coupled with this most stringent rule is Rule 19 of the Union's Show Rules, which reads:—

19.—These rules shall be published in the Show Schedule, and on every entry form shall be printed an agreement as follows, which shall be signed by the exhibitor:—"I hereby certify that the birds exhibited by me as above are bona fide my property, and I enter them at my own risk, subject to the Rules of the Cage Bird Union, which I have read, and agree to abide by the same; but the mere exhibiting shall involve such agreement, and denote my willingness to submit to the ruling of the Show Committee, District Committee, or Executive Council on all questions arising upon these rules, such ruling, subject to the right of appeal, to be absolutely final.

It will be seen that under Rule 19 of the Show Rules every exhibitor signs a declaration depriving himself of the right to independent action in the law courts, and undertaking to refer every dispute to the Cage Bird Union. Rule 19 of the Union Rules distinctly states that each and every appeal shall be deemed to be a reference under the provisions of the Arbitration Act, 1889. Now, Sir, how many exhibitors, registered members or affiliated societies are there who fully realise what this means, or who understand anything about the Arbitration Act? Very few, I am afraid. Do the members of the Executive Council know this Act, or understand the duties they have been called upon to perform under this Act? If they know the Act, why was the meeting held in Manchester recently not conducted in conformity with the requirements of the Act?

For the guidance of exhibitors and affiliated members I have obtained copies of the Arbitration Act (I enclose one for your perusal, and court your remarks on same), and will briefly refer to the section related to references by consent out of Court:—

1.—Submission (and signing the declaration on entry forms is a submission) is irrevocable.

4.—If any party to a submission commences any legal proceedings against any other party to the submission. . . . such party may apply to the court to stay proceedings.

5.—The courts have power in certain cases to appoint two arbitrators and an umpire.

7.—A most important clause—the arbitrators (the Executive Council of the C.B.U.) have power (a) to administer oaths, or to take the affirmations of the parties, and witnesses appearing.

8.—This section states that witnesses may be summoned to appear before the arbitrators by subpœna and to produce documents.

11.—This clause provides for the parties concerned to appeal to the courts where an arbitration or award has been improperly procured, and the court may set the award aside.

12.—An award on a submission may, by leave of the court or a judge, be enforced in the same manner as a judgement or order to the same effect.

20.—Any order made under this Act may be made on such terms as to costs or otherwise as the authority making the order thinks fit.

22.—Any person who wilfully and corruptly gives false evidence before any referee, arbitrator, or umpire shall be guilty of perjury, as if the evidence had been given in open court, and may be dealt with, prosecuted, and punished accordingly.

Your space, Sir, I know is both limited and valuable, but as this matter is of vital importance to every fancier in the country, I beg of you to publish the schedule to the Arbitration Act in full:—

THE FIRST SCHEDULE.

Provisions to be implied in Submissions.

a. If no other mode of reference is provided, the reference shall be to a single arbitrator.

b. If the reference is to two arbitrators, the two arbitrators may appoint an umpire at any time within the period during which they have power to make an award.

c. The arbitrators shall make their award in writing within three months after entering on the reference, or after having been called on to act by notice in writing from any party to the submission, or on or before any later day to which the arbitrators, by any writing signed by them, may from time to time enlarge the time for making the award.

d. If the arbitrators have allowed their time or extended time to expire without making an award, or have delivered to any party to the submission, or to the umpire a notice in writing, stating that they cannot agree, the umpire may forthwith enter on the reference in lieu of the arbitrators.

e. The umpire shall make his award within one month after the original or extended time appointed for making the award of the arbitrators has expired, or on or before any later day to which the umpire by any writing signed by him may from time to time enlarge the time for making his award.

f. The parties to the reference, and all persons claiming through them respectively, shall, subject to any legal objection, submit to be examined by the arbitrators or umpire, on oath or affirmation, in relation to the matters in dispute, and shall, subject as aforesaid, produce before the arbitrators or umpire, all books, deeds, papers, accounts, writings, and documents within their possession or power respectively which may be required or called for, and do all other things which during the proceedings on the reference the arbitrators or umpire may require.

g. The witnesses on the reference shall, if the arbitrators or umpire thinks fit, be examined on oath or affirmation.

h. The award to be made by the arbitrators or umpire shall be final and binding on the parties and the persons claiming under them respectively.

i. The costs of the reference and award shall be in the discretion of the arbitrators or umpire, who may direct to and by whom and in what manner those costs or any part thereof shall be paid, and may tax or settle the amount of costs to be so paid or any part thereof, and may award costs to be paid as between solicitor and client.

As the arbitrators are entitled to fees, and are empowered to award costs to be paid as between solicitor and client, the party losing an appeal runs a serious risk of having to pay anything between £20 and £50. Further, if the costs are not paid as ordered, payment can be enforced by execution, etc., as in the case of a court judgment. I strongly advise the Council of the C.B.U. to become acquainted with the requirements of the Arbitration Act, also strongly advise appellants to exercise their right to be legally represented when their appeals are heard. If I have taken an incorrect view of the terms of this Act, I hope to be corrected in your next issue by the Solicitor to the C.B.U. or some other gentleman equally learned in law.

AN AFFILIATED MEMBER.

THE CAGE BIRD UNION.

SIR,—In sending the list of societies voting in favour of Rule 17, I omitted to mention Blaydon-on-Tyne. Would you kindly announce this in your next issue? Please also announce that licences have been granted the following shows:—Redruth, July 3rd and 4th; Mansfield-Woodhouse, July 16th; Goole Society and Grimsby, July 18th; Knowle and Totterdown, July 26th; and Criccieth, July 27th.

GEO. W. F. LYTHGOE.

THE C.B.U. AND RULE 17.

SIR,—Personally, I am pleased that Rule 17 of the Cage Bird Union has been upheld, but consider that, as it now stands, it is lop-sided, and immediate action must be made to make it balance. I appeal for loyalty, and urge upon all to use their ability and to work through their respective societies for its improvement. To this end I purpose at the next meeting of the City and Suburban A.C.B.B. to move that this matter be referred to the Council of that body, for the purpose of framing an amendment to be sent to the Cage Bird Union, to be placed upon the agenda for the annual general meeting. If others will take similar action in their own societies, I feel sure it will result in the rule being made to act just and fair to all. Further, I am of an opinion the present method of election of the Executive Council of the Cage Bird Union is bad, and must be made democratic. Each affiliated society should have the right to nominate a candidate for their own district, the election to be by ballot; and every member of societies affiliated in the district should have the right to vote.

I am confident if we concentrate our efforts to improve the working of the Cage Bird Union, that in a short time we shall have an organisation of which we shall be proud.

A. C. BURN.

A MODEL NORWICH.

SIR,—I desire to thank your correspondent, Mr. Wm. Aitchison, for his kind remarks concerning my drawing of a model Norwich Plainhead, which you produced in CAGE BIRDS a fortnight ago. I have not the original drawing at hand, but on referring to your reproduction I am somewhat inclined to agree with Mr. Aitchison regarding the lack of substance in the legs. I do not think the fault is so apparent in the original, but is probably exaggerated in the reproduction, owing to the intensity of the shadow in the background. In conclusion, I assure Mr. Aitchison that I much appreciate his friendly criticism.

A. PADDOCK.

Several letters held over.

The Breeding of Scotch Fancy Canaries.

By J. RENWICK.

A Paper read before the Glasgow Confined Southern Ornithological Association on May 6th, 1907.

Mr. Chairman and gentlemen,—I am just afraid that the task you put upon me is one that, perhaps, I shall fall short in doing full justice to. However, I will do my best.

Personally, I have given the pride of place to the Scotch Fancy, as being the finest and the most perfect gem of the Canary tribe, a noble and graceful bird, and in my opinion having no equal. There are, as you know, many varieties of the Canary, but I think the bird that comes next in favour is the Norwich. This is also a beautiful bird, and, like the former, has many good points in its favour, and in England is considered their ideal, and is very largely bred, principally in Norwich, the town from which it derives its distinctive name. It is the opinion of myself and many others that the Norwich Canary has in many cases replaced the Scotch Fancy to rather an alarming extent, and it is remarkable when you think of it, the number of shows that do not have a class for Scotch Fancies, and of late years they have been rather on the increase. Now, I think you will agree with me when I say this is rather disappointing, and I am sorry to admit that in many cases price of stock has much to do with this state of affairs. However, this is an open question, and I for one will be glad to hear the opinion of others on this point, as there is certainly more reason than the one I have given. I have said the Scotch Fancy is the bird which holds the foremost place on the racks of Scotch breeders.

ROUGH OR SMOOTH, WHICH?

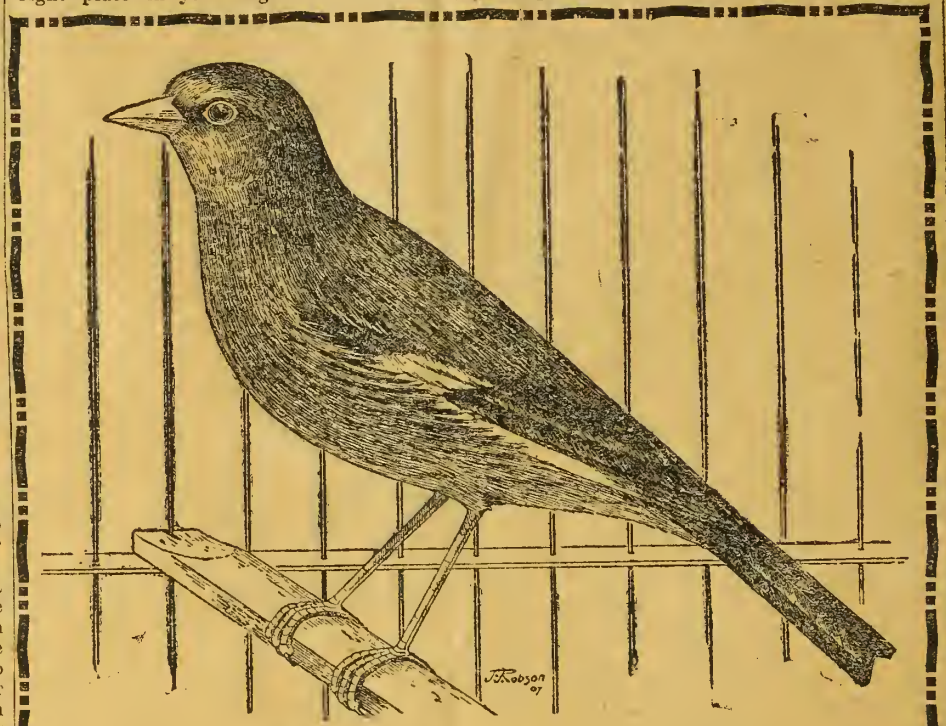
Last season I was much struck with the different exhibits of Scotch Fancy, and I must say, so far as it appeared to me and my judgment, there are in the eyes of different judges too many ideas of what goes to make a typical model of a Scotch Fancy Canary. Some judges favour a tight feathered bird, but they are in the minority, I regret to say, and others, again, are inclined to favour the loose and full feathered fronted bird. As regards the latter, I certainly say that a rough-feathered bird such as I have described, is not and cannot in my opinion hold any real claim as a true type of the Scotch Fancy, and is not to be compared to the bird tight in feather, and whose other points are as near perfection as possible. In my opinion it is next to impossible for any judge to give the reliable value in points between the two birds. With the tight-feathered bird he can, for example, form a very clear judgment, for depth through the chest, etc., but when we come to the full-feathered bird, what about depth through in its case? I say it is impossible to form any true judgment unless by handling the bird, and that, you know, is not practicable. There is much improvement wanted here, and those very rough-feathered birds, in my opinion, ought to go to improve the Dutch Frill Canary, to which class I venture to say they more truly belong, rather than the Scotch Fancy. I will now say a few words on the breeding of the Scotch Fancy Canary.

MATCHING SCOTCH FANCIES.

In the matching of Scotch Fancy, for breeding it is well to remember that the union of opposites are productive of the best results. In my opinion too much care cannot be taken in the selection of the hens, that they be of good size, shape and feather. I have always, as a rule, preferred that the hen should be as perfect as the cock, or even more so, but in so far as pairing up is concerned, much must be left to the fancier's own ideas, that is, the experienced breeder. To those who, like myself, are beginners, I would say a few words of advice in the selection of birds for breeding purposes. Place yourself in the hands of some well-known and respected breeder of repute on the show bench, and be guided largely by his advice, give the price you can best afford; better have one good pair than three inferior pairs, and you must not go away with the idea, supposing you have laid out a few pounds on your stock, that your reward will be all prize birds. To be a successful breeder you must possess, in a large measure, patience and perseverance, and, withal, good temper, as you will have much to upset you in Canary breeding. Granting you have all these three qualifications, and are prepared for any difficulties that may come in your way through losses in stock, there is little fear but that you will command success, as you go along.

CARE NEEDED IN PAIRING.

When you have your birds paired, you must keep a close watch on them to see that they mate properly. It is well to remember that they should not be mated until they show signs that they are ready. If you find the cock is not pairing with the hen, separate them for a time, but let them be within sight of each other. After a few days try them again, and you may be sure that things will go on all right. When paired give them a little hemp seed along with canary and hard-boiled egg. Let your egg boil for ten minutes. It is well that a little biscuit—I use the ordinary butter biscuit—should be mixed with the egg, and plenty of sand be given on the bottom of your breeding cages, along with a small piece of cuttlefish bone, either crushed or given in pieces betwen the wires. It is best to have a room with a southern exposure if possible for your birds. If matters are going on all right place in your cages some fine wool,



Dark Goldfinch-Canary Hybrid.

which must be pure. If you find they do not line their nests you had better put a little of the wool, well pressed with the finger, in the nests yourself.

In spite of all your care and attention you will at times find them lay away from the nest. In that case you must put the egg back, and most likely the second egg will be laid in its proper place. I adopt the plan of taking away the first egg, replacing the three when laid in the nest, which brings all the eggs out at the one time, but this is another point that may be questioned if it is advisable to do so. Of course, there is danger in breaking the eggs, and sometimes it disturbs the old birds, but care must be taken to avoid doing so as little as possible.

THE FIRST EGG.

Generally about the eighth day after pairing the first egg is laid, and each day after another egg is laid, until the whole four or five are produced, and in about 14 days the young ought to make their appearance; if not, it is better to wait a day or so longer, perhaps two days, and if no appearance, take them carefully out of the nest and put them in luke warm water for four or five seconds, then replace them in the nest, or if by holding up to the light you find any transparent then these are bad, or unfertile, or useless; this experiment may be adopted when the eggs have been sat on for eight days, and by doing this you both save time and likewise save your hen extra labour. It is not an uncommon thing for a hen to lay, perhaps, three eggs and then desert them. If you examine them, most likely you will find them bad. At other times you may find some of the eggs chipped, and sometimes thrown out of the nest. The cause of this, I think, is hunger, which makes them tamper with the eggs, and I feel sure supposing such a hen brings out young it is ten chances to one that she will forsake them or throw them out of the nest; in fact, she should not be allowed to sit on eggs of any special value, in case of accident. Certainly there are other causes, such as long nails, or the claws being dirty and clogged. The nails should be trimmed before the hen is allowed to sit.

FOREIGN BIRD ITEMS.

By F. FINN, B.A., F.Z.S.

THE "NOSE" OF A TANAGER.

A lady aviculturist has complained of late that an Olive Tanager she has is so greedy that he blocks up his nostrils when eating banana, into which he plunges his beak ravenously. This is a possibility whenever a short-billed and greedy bird is fed on this most wholesome, but highly pasty fruit, and the remedy is not to give the banana separate, but incorporate it with the soft food, which should always be crumbly in consistency. It should be borne in mind that fruit-eating birds naturally probably feed more on small berries, which can be swallowed whole, than on the large, luscious, squashy fruits which are the result of cultivation.

THE PEKIN PROBLEM.

With regard to the paucity of singing cocks among Pekin Robins, the solution is easy enough when one knows the whole of the facts as to how these birds reach us. They come here via Continental dealers, who pick out all the cocks they can; hence the consignments that reach us are mainly females—you can reckon on getting about one cock in four birds purchased, unless you have the luck to stumble across a lot that have not been picked over. In such a consignment it is easy enough to select cocks by the colour, which is generally brighter in this sex, chiefly on the breast. But in Pekins, as in Goldfinches, sex is not always equally easy to make out, and no doubt it is this fact that allows us to receive any cocks at all over here, unless the Continental dealers purposely leave in a few to keep our hearts up.

PACKING OF SOFT-BILLS.

The excellent condition in which these birds arrive here says volumes for the management abroad; with our dealers, penned up in boxes or small cages, and fed on bread and hemp seed, the poor birds soon go off in condition, though they have to be very bad before they get too far to be pulled round. I have found that two or three days on egg food produces a wonderful improvement in "rocky" specimens, and I should advise everyone to try this feeding in such cases, even if they do not believe in giving egg as a regular thing.

BARBARY DOVES AT LIBERTY IN LONDON.

The old strain of Barbary Doves (the cage birds commonly called Ring Doves) that used to live in St. James's Park, has now died out, but a pair of this species haunts Regent's Park, opposite the York and Albany. I saw them there last summer, but during the winter they disappeared, and I feared they had come to grief. However, a month or two ago they turned up again, and only last Sunday (16th) I saw one picking about on the cab rank as usual. The Avicultural Society has turned out some of these birds, as well as the Crested Australian Doves, in the Zoo grounds; but this was not till after the present pair had reappeared. I hope these Doves of both sorts, will become well established in the parks, as they are very ornamental.

More Trouble!

The Starlings have become a great source of trouble to the shepherds, says a writer in a contemporary, by leaving their droppings on sheeps' backs, where they are struck by the maggot fly, whose eggs in an hour or two become the dreaded maggot.

Fanciers are all talking about the *Substitute for Egg* AND *Bread Crumbs.*

Progress of Scottish Hybrid Breeders.

An Encouraging Outlook.

By ST. MUNGO.

The Hybrid breeders are busy, and hopes are high; the season has begun, and the rumours are encouraging. Fertile eggs were reported from the Bullfinch by Goldfinch, Redpoll and Greenfinch; the eggs frequently go back, so that the chicks cannot yet be counted. The Siberian Bullfinch hen is the most suitable for Hybrid breeding (having substance and size), and produces higher colour in the young, a fact which the writer can speak on authoritively from personal experience, having bred three winners which proved themselves in the keenest of competition.

If the breeder aims at success in point of numbers, he should mate a Greenfinch cock, large and of high colour, with a big Siberian Bullfinch hen. Condition is of first importance with the hen; she must be healthy and vigorous, and free from moping. But if he wants a really valuable exhibit, the Redpoll should be chosen and matched to a rich-coloured British Bullfinch hen. In no department in the Fancy has more disappointments to be encountered, and greater need for perseverance. Commencing in June, the Hybrid breeder has to have all his wits about him; he must necessarily have a lot of foster parents to hatch the eggs, otherwise it is no use attempting Hybrid breeding. True, Bullfinch hens may sit, but the successful Bullfinch hens I have had would not hatch. They laid in the nest all right, but simply went on laying. One, a German pet, I had splendid results from laid clutch after clutch of eggs, and had in the one season close upon 50 eggs. The next hen I was fortunate with was a beautiful Siberian, and she followed very much on the same lines. I had fertile eggs from other hens, but they did not hatch. It is strange, but none the less true, that a large percentage of Hybrid eggs become addled; the eggs seem to be very sensitive and very easily affected.

Hamilton will, I think, take the lead this year in the effort to produce Hybrids. A fancier in that town, of whom Scotland has just reason to be proud of, encouraged by his past success, has this year entered upon the hobby with spirit, and has one of the finest collections to be seen anywhere. Redpoll-Bullfinch he is specially keen on, having bred a Redpoll-Bullfinch Hybrid. Another favourite is the Canary-Bullfinch. He had a very fine cross of that kind last year. He is also eager upon the Goldfinch-Bullfinch and Greenfinch-Bullfinch. It is reported he has a large number of eggs in course of testing. The writer recognises him as the king of Hybrid breeders; he has but to be known to be appreciated. Many, inspired by his success, are following in his footsteps, but few have sufficient practical knowledge to treat Hybrids by breeding them, judging them, and reporting upon them. The attention devoted to them is bound to mend matters and produce a real satisfactory state of things. Strange, but a truism, the majority of the best birds have been bred in Scotland. They have had, however, to find a home in England to be appreciated. Instance recent champions—the Goldfinch-Bullfinch successfully exhibited by Mr. Williams, of Liverpool, undoubtedly by far and away the most handsome of this cross which ever graced a show; the Greenfinch-Bullfinch Hybrid successfully exhibited by Mr. Alf. Shelland, of Cathays, Cardiff, a brilliantly-coloured and nicely-shaped specimen; and the famous Goldfinch-Redpoll shown by Mr. Lamb, of Kingston-on-Thames, with singular success. These outstanding Hybrids were treated very indifferently in Scotland, but the moment they crossed the Border they blossomed into fame; and, while in health and vigour, they will be hard to beat. Properly-fed Hybrids improve with age, and yield genuine satisfaction to the owner.

The object of this article is to diffuse a better appreciation and knowledge of the most attractive of cage birds. Hybids have been condemned because they do not breed. If they can be replaced each succeeding year, there is far more satisfaction in breeding Hybrids than any other class of birds. At any rate, that is my candid opinion, founded upon personal experience.

The Hybrid breeder, if he wishes to succeed, must have a good supply of reliable common Canaries, and as, even at the best, only one odd egg is fertile, it is a benefit to sit at the same time two or three common Canary eggs. A single Hybrid never thrives, and therefore it is an absolute necessity to support a solitary Hybrid in the nest by a couple of Canaries of the self-same age. A Hybrid is so precious that, when it comes into the world, every effort should be exercised to preserve it and promote its growth. The eggs should not be handled. For the sake of a few days, they should be left alone till the hatching period is up.

If this is not the record year with Hybrids, it is not for want of trying. Of course, many pairs have been mated from which champions can never be expected. A fresh-caught British Bullfinch hen is useful for a Redpoll, but for the others nothing can compete with a Siberian.

The best pairs I have come across are of very great promise. The first is a very rich-coloured Greenie, matched to a very massive Bullfinch hen in the pink of condition. It was obtained by writing to a London dealer. It cost a higher figure than what a Britisher could have been got for, but it is worth the small difference. They were only a week or so in the cage when they were observed feeding. The ordinary wooden wicker cage used by dealers for sending on stock was fitted up in a corner of the cage, and the hen is now busy building. They are working hard, and there is every appearance that the pair are likely to gladden the owner. They are an ideal couple.

Another fine couple is a proved Greenfinch and a very handsome Siberian Bullfinch hen, the latter also procured from a dealer. She is lively, and is busy nesting. A small box, perforated at the side, has been fixed inside the cage, and the hen has taken to it, and seems much attached to her habitation.

Siberians, as a rule, are late in starting, but when they commence they make up for lost time.

A really nice pair, with a cosy nest built, is a British Bullfinch hen with a tiny Redpoll. They are fairly mated, and, if fertile eggs are got, a valuable Hybrid should be forthcoming. A single male cross of this description is worth an entire season's breeding. Not a single specimen of this kind is known to exist in the United Kingdom.

THE BIRD LOVER'S LIBRARY.

BRITISH BIRDS.

BRITISH BIRDS: An illustrated magazine devoted to the birds on the British list. Price 1s. monthly, net. Publishers, Witherby and Co.

From Messrs. Witherby and Co. comes No. 1 (June, 1907) of a new monthly magazine, entitled "British Birds." It is edited by H. F. Witherby, F.Z.S., etc., assisted by W. P. Pycraft, A.L.S., etc., and has for its scope the chronicling of interesting matters concerning the wild life of all species accepted on the B.O.U. list. The issue under notice is a 32-page number, admirably produced, and containing valuable photographic illustrations. Many of our leading present-day ornithologists are taking an interest in the new-comer, including the Hon. Walter Rothschild, Drs. E. Hartert and P. L. Sclater, and Messrs. Howard Saunders, J. H. Gurney, F. C. Selous, W. Eagle Clarke, C. Whymper and others.

In the current number Mr. Saunders enumerates the additions to the list of British birds since the publication of the 2nd edition of his "Manual" in 1899. These total no fewer than 20, and include the Dusky Thrush, Black-eared Wheatear, Siberian Stonechat, White-spotted Bluethroat, Siberian Chiff-chaff, Cetti's Warbler, Grey-headed and Black-headed Wagtails, Masked Shrike, Red-rumped Swallow, Citril and Snow Finches, Meadow and Yellow-breasted Buntings, and the Black Lark. Dr. Sclater discusses a supposed new British Tit, the "Willow Tit" (*Parus kleinschmidti*), said to be found at Coalfall Wood, Finchley, also at Tunbridge Wells and in the valleys of the Tweed, Forth and Spey, Scotland. It is suggested as being merely a form of the Marsh Tit, a British sub-species of which is already recognised (*Parus dresseri*.) Mr. Selous writes on the "Nesting Habits observed Abroad of some Rare British Birds." Mr. P. H. Bahr has a most interesting contribution entitled, "A Study of the Home Life of the Osprey," accompanied with three fine photoghaphs of his own taking. Concerning the methods of this fish-eating species he says: "The evenings and the early mornings are the favourite times for this pursuit. Then we would often observe some four or five circling round together, often at no great height above the water. One would make his mark, the great wings would close, and down on to the water, with a resounding splash, the bird would drop and disappear from view, to rise a second or so later with a silver fish, often, as we remarked with some surprise, of no great size. Then, shaking the spray off his plumage, he would slowly wend his way home. . . . The Osprey is not always fortunate in his fishing, and failures are many. He does not always manage to 'strike' in time, and often emerges from a plunge empty-handed. . . . The largest fish I ever saw being carried by an Osprey was a flatfish, which, although partially eaten, weighed at least three pounds. The captor, exasperated by my presence near its nest, eventually let the fish drop, and it narrowly missed my head."

That there can be a useful future before this magazine few will question, and we trust it will meet with the support it deserves from all interested in our British birds.

Eiffel Tower Lemonade

A 4½d. bottle makes 2 gallons of delicious home made Lemonade.

Health in every sip, refreshment in every drop.

SOME PROBLEMS OF COLOURATION IN BIRD PLUMAGE.

By the Rev. D. PERCY HARRISON.

Notes on a Lecture delivered before the Members of the Swindon C.B.S. on April 17th, 1907.

If a feather be pulled out from a living bird and split longtitudinally, its interior will be found slightly moist and full of a net work of fine cells, far more dense and of a far more living aspect than appears in a section of a moulted feather, or one from a bird dead for 24 hours. It is through the living tissues of the shaft of the feather that apparently the colours rises into it. How it does so we are not able to say. What the colouring matter is we cannot say, but, at any rate, in some foreign birds of the Pigeon and Parrot genus it is, if I may use the expression, almost free. The red colouring, if wetted, will come off on the fingers.

COLOUR CHANGE WITHOUT MOULT.

This curious colour change without moult is best seen in the Black-headed Gull, when in February the white feathers of the head begin to assume a brown tinge. By the middle of March the bird has assumed a chocolate head and neck. It can also be observed in the bright red colouring which some of the Waders put on their breasts in spring, e.g., the Knot, the Curlew, Sandpiper, and the Godwit. Again does this change take place in the case of birds which spend the autumn and winter in an immature dress, and assume the adult plumage the following spring? Why the young Cuckoo leaves us a moulted, brown creature and returns, with an occasional odd exception, in the well-known grey dress, it is difficult to answer. I kept a young Cuckoo once through the winter in order to solve the question, but it was most troublesome to feed, and died just at the crucial moment when it was beginning the seasonal change (moult). Some few of the feathers were turning grey, but I saw no signs of any cast feathers in the aviary, neither do any seem to be shed by young Starlings in spring. In some species, I believe, a few neck and head feathers are moulted in the spring time, especially in the case of the Wood Pigeon and Thrush.

One of the most interesting, and at the same time most obscure, problems connected with birds is the mode in which the colour changes in their plumage at different seasons of the year. Birds are known to moult, and the rough and ready solution of the man in the street is that the change of plumage is produced by this process, but careful observation convinces us that this is only partially true, and does not account for some of the most striking alterations in bird dress. Roughly speaking the two greatest changes take place in spring and autumn, and, roughly speaking again, the autumn change is chiefly produced by moult, the spring change is by a gradual alteration in the pigment of the feathers themselves without moulting.

A STRIKING CHANGE IN THE SPARROW

Take, for instance, so common a bird as the Sparrow. In spring he assumes brighter colours. His gorget becomes more extended and of a deeper black. In his case and in that of many other birds of kindred species, the process is a double one. The winter feathers of the neck, head and back have ash grey tips to the webs. In spring these break off, and leave exposed the darker colouring of the lower part of the feathers, so that the markings become more pronounced and distinct. But, side by side with this, colour seems to rise into the feathers in some mysterious way. How, we are not able to say, but rise it does, as can be seen by the change which takes place at the same time in the colouring of the beak and legs and even claws, horny as they are. Witness the bright yellow of the Starling's bill in spring. We are apt to look upon a feather as dead matter. It is true that when at the moult new plumage is assumed. We can see for ourselves that the feathers are alive, the stalk is full of blood, and is obviously part of the living organism. When, however, the feather is fully grown, it appears lifeless, it no longer bleeds when cut, and the owner feels no pain if it be severed close to the skin. Yet I think it is really still alive and still in contact with the juices of the body as long as it remains attached to the pedicle from which it grows. The sporadic shedding of a few feathers while the new brilliance is put on is almost entirely due to a modification of the old winter dress by injection of colour from the interior juices of the living body.

FROM GAY TO DULL.

In my remarks above I have dwelt upon a change in colouration produced by intensification, i.e., the dull winter plumage becomes more ornamental in spring. But there are also instances in the bird world of an opposite change, viz., an obscuration of the bright plumage. This is especially noticeable in the Mallard, and in the males of some others of the Duck tribe, which, as is well-known, assume a dress very like the hen bird. I have often watched the process in the head of a drake, and I believe it to be brought about by the change of colour from green to brown, though there must be a certain moult, inasmuch as he loses his curly tail feathers. The true moult, however, begins when the drake begins to assume once more his original glorious apparel. I have noticed this eclipse dress in the Mallard, Pintail and Widgeon, but never in Pochard, though my observation has been confined to ornamental waters and I am subject to correction.

Of one thing I am sure, that if those who keep birds in confinement would make careful notes of the change of plumage of their pets, they would be adding greatly to our scientific knowledge of bird life. The subject has been very imperfectly studied, and much more evidence is needed before we can speak positively on many of the points I have raised, and I feel sure that to have a definite point before our eyes on which to make our observations is a sure means of enhancing the pleasure we get from any pursuit, and not the least from the amusement of keeping birds in captivity.

To be continued.)

WILD BIRD NOTES AND QUERIES.

Windy Weather.

Wild birds dislike the wind, and the inclement weather we are having must be very unpleasant to them. Yesterday I saw some young Rooks struggling gamely against the wind and rain, the old birds flying near them and giving encouraging caws, but they could not manage to make headway, and had to return to the open field, where they were previously feeding and resting.

The Plover.

One would think the Green and the Golden Plover would behave very much alike when disturbed during the nesting period. This, however, is not by any means the case, for the golden bird will allow one to almost tread upon her before quitting her charges, and the cock bird will run some distance, then stop and watch the intruder. The green bird is all noise and bustle, rising from the ground when the top of one's head is just visible over the hedge. He twists and turns and scrambles round the field, shouting repeatedly; the hen bird leaves the nest long before one can get near it. When these birds nest in higher latitudes, they appear to conform to the general rules, and commence operations some fortnight or three weeks later than the birds in the lowlands.

The Food of the Flycatcher.

A very conspicuous bird is the Spotted Flycatcher. When we walk along the high road or the footpath by the wood, he courts our immediate attention. From the post or fence he darts across the path to catch some passing insect. This he repeats time after time, so that one may be led to think that insects caught upon the wing are his only food; but if we visit the snug little nest, concealed among the ivy growing up the trunk of elm trees, we shall, from time to time, see that one of the parent birds conveys green caterpillars to the young ones quite as frequently as they do winged insects; possibly they find them of greater bulk and consequently more sustaining. When one has to feed a brood of hungry nestlings, it is necessary to feed with the food giving the best results. No doubt the Flycatchers think so to.

Our Friend the Sparrow.

A rather amusing correspondence has been going on in one of the daily papers concerning the House Sparrow. One writer complains bitterly of the London Sparrow; the bird is astir early in the morning, and by his incessant chirping prevents the writer from obtaining his full number of hours of sleep. He sighs for the country, and the sweet voices of the song birds. A writer hailing from Peckham Rye says he wakes early, and the cheerful chip-chip of the Sparrow tells him it is time to be up and doing. Yet another sighs for the town life. He cannot sleep at night for the incessant "jug jug" of the Nightingale and the melancholy hooting of the Owl, and at daybreak the early birds and the rooster; and later the farm horses, rattle of milk churns, dogs, etc., disturb his repose. What a pity it is that some of these discontented ones cannot change places.

Mimicry of the Song Thrush.

Very few of our resident birds are able to confine themselves exclusively to their own song. The Woodlark is one of the exceptions; and, generally speaking, we seldom hear the Skylark's melody mixed with that of any other, possibly on account of the great numbers of the species singing everywhere—although the bird is a sad mimic when confined, and a caged Lark with the true wild note is an exception rather than the rule. With regard to the Blackbirds and Song Thrushes, it is different. They mix with their song any peculiar sound that attracts their attention, some passages from the Blackbird sounding almost like spoken words. Recently I heard several Song Thrushes singing in a small plantation noted for the great number of Nightingales frequenting it, and some of these birds had undoubtedly borrowed certain passages from the night songsters, and they rendered them in a manner delightful to listen to. There was certainly an improved song prevailing throughout the wood.

BREEDERS SHOULD USE "THE STOCK BOOK."

Advertisements continued from page 565

SALE OR EXCHANGE—continued.

WHITE legged cock Goldfinch, moulted this year, safe with eggs, guaranteed, 7/6; exchange.—Breese, March.

EXHANGE three Canary-reared cock Linnets for Roller cock, or offers.—D. Scott, 13, Esher-st., Deptford, London.

COCK Bullfinch, cock Linnet, cock Redpoll, buff Canary hen, also good cock Goldfinch, moulted.—8, Spring-rd., Abingdon.

WHAT offers in exchange for house moulted Goldfinch, Linnet, and four hen Canaries? No live stock.—Barnett, Cefn, Merthyr.

COCK Goldfinch, 6/-, exchange yellow hen Budgerigar, 70 copies CAGE BIRDS, exchange cock Madagascar.—Tucker, 318, Radford-rd., Nottingham.

EXTRA large Linnet and typical Norwich hen, exchange Roller or Mule.—Lee, 35, Marshall-av., Bridlington.

TWO extra large Bengal Tiger Cubs, perfect condition, exchange for large steady good coloured cock Hawfinch, or sell £1.—Taylor, 4, Ralston-ter., Annisland.

LARGE house moulted English cock Goldfinch, clear beak and full song, for steady hand-reared cock Woodlark, must be in full song, or sell 7/6.—Outram, Riber Cottage, Heanor, Derbyshire.

SPLENDID Linnet and Yorkshire hen, just bred me five Mules, now nesting again, 15/-, or exchange blue Persian Male cat.—Sadler, Mickley House, Eccles.

TWO Chaffinches, one Bramblefinch, cocks, 5/-; pair Mealy Redpolls, 5/-, caged months; exchange boy's Norfolk suit or anything useful.—Pledger, 66, Albion-rd., Great Yarmouth.

YOUNG cock Blackbirds and Song Thrushes, 1/- each, 9/- dozen; cock Greenfinches, 2/- dozen; mixed seed birds, 2/- dozen; Yellow Wagtails, Wheatears, Whinchats, 2/- pair; exchange.—George Fenn, Fleet's-yard, Isleham, Cambs.

LARGE 1906 hand-reared Magpie, plain talker, 8/6; large Norwich cock, two hens, nesting, 15/6, approval, deposit, or exchange British or Foreign Seedeaters, or cages, anything to value.—Downing, Raunds, Northants.

TWO Linnets, 3/6 each; Goldfinch Mule, 5/-; Linnet Mule, 3/6; Redpoll, 2/-, all cocks, in full song; Norwich hen, 3/-; Goldfinch, with hen Canary, 7/6; house moulted Linnet, with hen Canary, 6/6, both had young this season, or exchange anything.—Kempsell, 29, Maydwell-st., Albany-rd., Camberwell, London.

Mainly Canaries
To be Sold or Exchanged

GRAND pair Norwich and four young, exchange, offers.—W. H. Turner, 4, Southgate, Sleaford, Lincs.

EXCHANGE Canaries for Parrot or Grass Finches, or offers.—Knowles, Helston-rd., Penryn, Cornwall.

GRAND pair Cinnamons, exchange clap nets, offers, sell 15/-.—Haysom, 62, Liverpool-st., Southampton.

NORWICH cock and two hens, breeders, sell 15/-, part exchange, anything useful.—Alfred Bryan, Derby-rd., Belper, Derbyshire.

HIGH-CLASS pen black Orpingtons, Simon Hunter's, can win, 50/- cash, or exchange.—Raybould, 54, Oakham-rd., Dixon's Green, Dudley.

PAIR Norwich Canaries, 8/-, ready to nest, exchange Crest or Lancashire.—Hatch, 4, Homerule-cottages, Poundfield, Jarvisbrook.

GRAND young Norwich cocks, 5/- each, fifty to choose from.—Oakley, Coroner's Court, Warwick-pl., Whitecross-st., E.C.

TWO healthy Norwich hens, one has had nest of Mules, exchange house moulted cock Linnet, in song.—Curtis, 79, Tewkesbury-rd., Cheltenham.

NORWICH Canary, grand songster, 12/-, with cage, exchange phonograph, also flight cage and single breeding cage, cheap.—M., 60, Waltham-av., Fulham, S.W.

EXCHANGE yellow Norwich hen (proved breeder) for cock Skylark, muling cock Twite, and cock Chaffinch, sound birds, for cock Woodlark.—S. Shew, 217, Bravington-rd., West Kilburn.

FIRST feather Norwich, grand strain, no room, cocks, 4/-, hens 2/-, must clear for next round, would exchange some for good Hawfinch.—Johnson, 111, Heysham-rd., Southport.

TWO pairs of 1906 high-class Norwich, also three young cocks from above, Bishop, Vardy's strain, for good gramophone and records, or talking Parrot and cage, or sell 50/-.—William Outram, Riber Cottage, Heanor.

LARGE Belgian and Yorkshire cock Canary, also two Seifert Roller cocks, all in full song, 1906 birds, will exchange for Mules, in full song.—Walker, Man's-buildings, Lees Moor, Dewsbury, Yorkshire. Approval.

NOTICE—FOR SALE.

A grand lot of young Canaries, 25 cocks and 31 hens, all in excellent condition and plumage and my own breeding; cocks at 3/- each, hens 1/6 each; or 24/- six pairs; or will exchange for cutlery or chinaware.—J. Archer, 1, Drysdale-pl., Drysdale-st., Kingsland-rd.

Mainly Foreign
To be Sold or Exchanged

PEKIN Robins, good condition, outdoor aviary, exchange Foreign Seedeaters, or offers.—Garner, Union, Petworth, Sussex.

SPLENDID talking Amazon Parrot, £2 10/-, or exchange Lancashire Coppies or Yorkshires; approval both ways.—Eaves, East Cliff, Lytham.

BLUE-FRONTED Amazon and cage, healthy, acclimatised, feed from hand, talking, sell 35/-, or exchange good phonograph and records.—Carlyle, 18, Sheffield-st., Carlisle.

ROSE-BREASTED Cockatoo, young, good talker and mimic, splendid plumage, £6 10/-, or exchange American organ or piano.—Erlam, 48, Regent-st., Watford.

FOR Sale or exchange African Grey Parrot and cage, well acclimatised, talks, laughs, imitates dog and cat, sell £4, or exchange gent's good cycle, cycle first.—H. Trickett, No. 3, Boggun row, Chesterton, near Newcastle, Staffs.

Miscellaneous
Sale or Exchange

CYCLE tyres, new, exchange Canaries, offers.—McPherson, 14, Drive-rd., Govan, Glasgow.

CLAP nets, each net 5 ft. by 2 ft., ready to work, exchange Canaries, British or foreign birds.—F. Cooper, 52, Hembury-st., Harpurhey, Manchester.

OLD English 8-day clock, £3, or exchange good Roller cocks, birds sent first.—Toward, 80, Victoria-bridge, Leeds.

WILL sell or exchange for good Yorkshires 255 "Golden Pennies," 6 "Hour Glass," 10 "Hobbies," 100 CAGE BIRDS, and 21 parts of Hobbies Model Incubator, will separate.—J. Critchley, 7, West-st., Salford, Manchester.

EXCHANGE 40-egg incubator for rifle or gun, Canaries, or offers, also young Owl cheap.—Cridleford, Broomhills, Honiton.

WANTED, adult pair aviary-bred Budgerigars, exchange "Flag to Pretoria," 30 parts, quite clean, unbound, or sell 7/6.—Statham, Blaisdon, Longhope.

WHAT offer 80 CAGE BIRDS, few plates, for good Yorkshire, or anything.—Jones, Juniper-st., Hulme, Manchester.

RECORDS, four dozen Edison Bell, good banjo, sell, or exchange anything, gent's cycle wanted.—Northam, 15, Fifth-av., Paddington.

FOR Sale, good Collie dog, or exchange for good young Irish Terrier.—Linsey, Ebenezer Cottage, Cherryhinton, Cambs.

THREE Whippet pups for sale, 5/- each; exchange cock Canaries, Goldfinches.—Hedge, 5, Fairbairn-ter., Church-st., Woking.

NEW Stanley fountain pen, exchange cock Canary-Goldfinch or Bullfinch.—Harris, 45, Radford-rd., Nottingham.

BOOTS.—Gentleman's, size 6, misfit, cost 12/6, exchange Canaries.—P. Charlesworth, Victoria st., Holmfirth.

HANDSOME Fox Terrier dog, nine months, splendid house guard, well marked, 15/-, or exchange birds, or offers.—W. Fenn, Wilnecote, Tamworth.

DECEASED son's 14 ct. gold lever, lady's 14 ct. Geneva, splendid timekeepers, 50/- both, sell separately; approval.—Mann, Willington, Durham.

TWO six-compartment breeding cages, loose wire fronts, good condition, 7/6 each, or exchange for clothing.—Mrs. Day, 45, Dosthill, Tamworth.

"HISTORY U.S.A.," 2 vols., cloth bound, large aviary, 36 by 36 by 18 (new), Toy puppy, crossbred, Pug Terrier; stamp, reply.—Holmes, Lipbook.

LARGE square Parrot cage, bell top, good condition, exchange Foreigners, hen Cardinal wanted.—Day, 243, Kingston-rd., Wimbledon.

EXCHANGE gent's silk hat, 6¾, new, for pair of Rollers or trained Roller cock; approval.—James Smith, 8, Crossgate, Durham.

WILL exchange bedding plants for anything useful, offers poultry, Canaries, linolcum.—Nurseries, Airmyn, Goole.

CANARIES or cash given in exchange for cast-off clothing, nothing but straightforward dealing; if not approved, parcels returned; carriage paid.—Mrs. Kay, 19, Duke-st., Liverpool-rd., Manchester.

YOUNG gent's gold mounted stick, 4/6, exchange Roller cock; also small 9 ct. gold medal and case, 12/6, exchange Norwich cocks, untried; offers.—Hulton, 19, Evans-st., Middleton, Lancs.

PHONOGRAPH and records, wants slight repair, 30/-; mail cart, 15/-; London Stereoscopic ½-plate camera, 25/-; Crystal Palace aviary, 20/-.—40, Bridge-rd., Hammersmith.

EXCHANGE an electric belt, in good order, by Dr. McLaughlin, Glasgow, for exhibition British Hardbills, light Mules, or travelling bag.—J. Lang, 3, Plant-st., Dennistoun, Glasgow.

HIGH-CLASS Show Homer, extra stout blue hen, big winner, £2, or exchange for good Hawfinch or Crossbill cock.—John Mowbray, West Linton, Peebles-shire.

PURE-BRED Collie pup, dog, eight weeks, sable and white, 7/6; large house moulted cock Linnet, full song, 5/-, or offer.—Dawson, 29, Victoria-st., Scarborough.

BIRD drinkers, ornamental brass fronts, 1/- dozen; zinc drinkers, black enamelled outside, 1/3 dozen; all carriage paid; exchange Canaries or Goldfinches, any number.—Smith, 79, Astonville-st., Southfields, London, S.W.

GERMAN cock, winner, full song, 12/6; hen, 2/6; Yorkshire hen, buff, 3/-; gent's silver lever watch, good time keeper, 35/-, or exchange young Norwich, chicks, anything useful.—Bayson, 23, Ordnance-rd., East Greenwich.

EXCHANGE six ivorine-handled knives or pair carvers or pair hollow-ground razors, in silk-lined case, for one cock or three hen Canaries; approval.—Herbert Marsden, Cutlery Manufacturer, 175, St. Phillips-rd., Sheffield.

FOR Sale, red Clough Pigeon (hen), fit to show.—J. Watson, 10, Wharf-st., Sutton Bridge.

BARGAIN.—Over bought, one gallon finest oak varnish and can, 5/-, cost 8/9.—Osborn, Brady-st., Bethnal Green.

WARRANTED new 42 in. brass phonograph horn, six records, 15/-; satisfaction guaranteed.—West, Grocer, Didsbury.

LIVE healthy quail, 2/- pair; Tortoise, 6d. and 9d. each; Hedgehogs, 1/-.—Clarke, Bird Specialist, High-st., Sydenham.

SCOTCH tweeds, costume cloths, etc., direct, keenest prices, write for patterns.—Campbell Co., 37, Church-st., Govan, Scotland.

PAIR grand Norwich Canaries and breeding cage, 8/6; also four single cages, 3/6 each, worth double easily.—Willcocks, Dove House, Green, Ashbourne.

GUARANTEED whalebone corsets, double busks, black or dove colour, 19 in. to 30 in., 2/6 free.—Harper's Stores, Nechells, Birmingham.

A BARGAIN.—Gent.'s genuine 18-ct. gold (stamped) filled double curb Albert, very fashionable, sacrifice 12/6. Sent for inspection quite privately before payment.—G. Davis, Pawnbroker, 26, Denmark-hill, London.

A BARGAIN.—Gent.'s 18-ct. gold-cased Chronograph stop Watch, perfect time-keeper, jewelled movement, 10 years' written warranty, worth £2 2/-, sacrifice 12/6. Sent for inspection quite privately before payment.—G. Davis, Pawnbroker, 26, Denmark-hill, London.

A BARGAIN.—Lady's 18-ct. gold-cased keyless watch, jewelled movement, perfect time-keeper, 10 years' written warranty, worth £2 2/-, great sacrifice, 13/6. Sent for inspection quite privately before payment.—G. Davis, Pawnbroker, 26, Denmark-hill, London.

A BARGAIN.—Lady's handsome long Watch or Neck Chain, genuine 18-ct. gold (stamped), filled, exquisite Bond-st. pattern, in velvet case, sacrifice 14/6. Sent for inspection quite privately before payment.—G. Davis, Pawnbroker, 26, Denmark-hill, London.

A BARGAIN.—Lady's massive 18-ct. gold (stamped) filled curb chain padlock Bracelet, with safety chain attached, in velvet case, great sacrifice, 12/6. Sent for inspection quite privately before payment.—G. Davis, Pawnbroker, 26, Denmark-hill, London.

A BARGAIN.—Double-barrelled breech-loader Gun, 12-bore, top lever, Government proof barrels, left choke, rebounding locks, walnut stock, worth £6 6/-, sacrifice 29/6. Also another, hammerless, worth £12, sacrifice 65/-. Willingly sent for inspection quite privately.—G. Davis, Pawnbroker, 26, Denmark-hill, London.

A GRAND Yorkshire Terrier bitch and her three pups, ten weeks old, very low to ground, nice tanned head and legs, steel back, a capital brood bitch. I will accept £1 each for the bitch and three pups.—Pimm, Icknield Port-rd., Birmingham.

VALUABLE violin, property late violinist, marvellous tone, labelled "Stadivarius Cremona 1721," lock-up case, bow, tutor, music desk, £12 12/- outfit, sacrifice 19/6; approval willingly.—Mrs. Tyler, Rockingham, Uxbridge.

BUFF Orpingtons, five lovely pullets, unrelated cockerel, February, 1907, hatched, healthy, well-grown, rich buff, clean white legs and beaks, Butterfield's and Cook's laying strains, early autumn layers, lay all winter, 18/- lot.—R. Marshall, Hagworthingham House, Spilsby, Lincolnshire.

"CAGE BIRDS" GREAT
CANARY BREEDING COMPETITION.

A Boon to the Fancy. £28 Cash in Prizes.

TWO SECTIONS: (1) NOVICES, (2) OLD HANDS.

1. Only Novice Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907 Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible. (Note definition of "successfully reared" given on Declaration Form.)
5. All stock birds used must be the *bona fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society; or may swear a declaration attested to by two responsible witnesses. Declaration Forms (see extracts printed below) are now ready, and will be sent any competitor post free on application; a postcard will do.
7. From now till the date of the **COMPETITION CLOSING, AUG. 17th,** each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

NOTE.—All entries must be sent in by August 17th.

EXTRACTS FROM DECLARATION FORMS.

FOR COMPETITORS.

I, the undersigned, having entered for "CAGE BIRDS" 1907 BREEDING COMPETITION, hereby make declaration, according to the terms of the said Competition: (1) That this is the first season I have tried to breed Canaries; (2) That I have used this season .....*(state number)*..... Cocks and .....*(state number)*..... Hens, which were and are now *bona fide* my own property; (3) That I successfully reared* by August 13th, 1907, ...*(state number)*..... young Canaries entirely from the aforementioned .....*(state number)*..... stock birds, the said young Canaries being in good health on the said August 13th.

* By "successfully reared" is meant that the young birds are feeding themselves—that is, are requiring no assistance from their parents.

FOR WITNESSES.

We, the undersigned, having read the Declaration of .....*(state name)*..... of .....*(give full address)*..... hereby declare that, to the best of our knowledge and belief, the said Declaration is true in substance and in fact, we having seen the above birds and checked the stated particulars concerning them.

DECLARATION FORMS NOW READY.

Please apply,

Canary Breeding Competition.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

WE DO NOT GRUMBLE !!

AT the consideration and support accorded us by the huge number of Bird-keepers, Fanciers, and Exhibitors who have so kindly patronised us in the past. We beg to thank them and trust they will still continue to support us in the future.

For the benefit of those who have not yet favoured us with their orders, we append herewith a few letters recently received from those whom we have supplied with Seeds and Foods. **£50 will be forfeited** to any Charitable Institution, if these are not genuine remarks from customers concerning our goods.

Another testimonial we are particularly proud of is our increasing business, year by year, proving we are giving

GOOD VALUE FOR MONEY

J. G. Davenport, 11, St. John Street, Bridlington, April 11th, 1907.
Thanks for seed received this morning. It seems to be of excellent quality, and I am very pleased with it.

H. B. T., Oldroyd House, Waterloo Road, Bedford, April 4th, 1907.
Seed, etc., reached me safely yesterday. They give every satisfaction.

H. Mills, 27, Duke Street, Northampton. November 13th, 1906.
Seed to hand; am very pleased with it—quite up to sample.

C. Fielding, 4, Glencairn Road, Streatham, June 10th, 1907.
When we were at the Crystal Palace Show we bought some of your seed, etc., from your stall, and, being very pleased with the quality, we desire a further supply, and enclose P.O. for same, with list of goods required.

Warton Grange, Carnforth, May 24th, 1907.
Miss Ethel Barton will be much obliged if Messrs. Trower will kindly send her the following seeds, of the very highest quality. No firm has ever given such satisfaction as Messrs. Trower. Their seeds are clean and full, and true to sample.

E. Garway Atkins, Henleaze Avenue, Westbury-on-Tryn, Bristol, May 9th, 1907.
Received seed safely. I thank you for forwarding it to me so promptly, and enclose P.O. for the same.

A. E. Smith, 8, Old Bilston Road, Wednesbury. November 19th, 1906.
Kindly quote prices for the following. Your seeds are the best I ever had, and there seems a good sale for them in Birmingham and West Bromwich.

Miss Staples Browne, Bampton.
Miss Staples Browne is much pleased with the seed, and thanks Messrs. Trower for sending it so quickly. She encloses P.O.

W. H. Laurence, 5, Milan Street, Cape Town, South Africa, December 5th, 1906.
Gentlemen,—Having received the four bags Spanish Canary and G.S. rape through an agent from your firm, I must say I am highly satisfied with the same. They are well up to the samples you were good enough to send me.

Stephen Laxton, Rippingale, Bourne, January 4th, 1907.
Please send me seeds as per list overleaf. The other seeds I had of you were most satisfactory, and I liked the way you so promptly despatched.

Charles Conqueror, 68, York Street, St. Helens, Lancs., March 18th, 1907.
I find both Lark food and your high-class "Cecto" for Nightingales and other Foreign birds, marvellous for keeping them in full plumage and song; and the tin of meal worms you sent me a fortnight ago is the best that money can buy. Friends round me are surprised at the value you give for the money.

H. Levitt, Hatfield Peveral, Witham, Essex.
Will you please send me 4 lbs. more of your "Softbilo," same as the last I had from you? My Thrush seems to thrive very well on it.

Geo. Bousfield, Naturalist, Market Hall Bird Stores, Derby, May 6th, 1907.
I am pleased to say that my customers speak very highly of the merits of "Softbilo," and are recommending it to their friends. I have no hesitation in saying it will shortly command a good sale in Derby. Please send, etc.

Henry Hannah, 373, Main Street, Bonhill, Dumbartonshire, January 29th, 1907.
My birds are doing splendidly on the "Softbilo" I had from you.

R. Carter, 56, Danby Street, Bellenden Road, Peckham, June 10th, 1907.
Please send me a supply of meal worms per return. "New Cecto" is grand stuff.

W. L. Murray, 40, Fort Street, Douglas, Isle of Man, June 2nd, 1907.
Would you send me 1 lb. of your improved "Cecto" for insectivorous birds? I may say I had some of this food from you some time back, and I can say I found it streets ahead of any other in every respect for the keeping of Tits and Goldcrest Wrens.

Peter Wylie, 4, Espadair Street, Paisley, N.B., February 4th, 1907.
Would you be so kind as to send me another 1 lb. tin of "Cecto"? I am sending a Softbill (Blackcap) to the Palace Show. This bird has won at many of the leading shows in Scotland, and has been fed on "Cecto" for over twelve months.

W. Hibbert, Agent, Apperknowle, Unstone, Sheffield, June 18th, 1907.
I think your "Cecto" the best insect food I have ever had, as I have reared almost all kinds of insectivorous birds with it.

Dr. A. G. Butler, 129, Beckenham Road, Beckenham, May 13th, 1907.
I think the new food an admirable mixture, and my birds say so too. The sample tin lasted them four days, and from the way they attacked it there can be no question as to their opinion. My birds have been worrying me to lay in a stock of your new food. You might send me a dozen pounds early in June.

S. A. Sandy, 133, Laitwood Road, Balham, May 9th, 1907.
I have tried the sample of Insectivorous Bird Food you gave me, and in my opinion it is an excellent food, and the birds eat it readily. The ant eggs are of fine quality, as also are the other ingredients. It is a food suitable for the most delicate insectivorous birds, and its low price—1s. lb.—places it within the reach of all those interested in that branch of the Fancy. I am meating off a couple of Stonechats upon it, and find they eat it readily.

G. W. Acland, 7, Cecil Avenue, Strood, Kent.
Re your great soft food competition, please let me know at what shows your medals are to be competed for. I have already been successful in winning one gold and one silver for most points at Rochester and Gillingham, one gold medal for best bird fed on "Softbilo" at L. and P.O.S. late show. My birds are fed entirely on "Softbilo," and the more delicate on "Cecto." The following prizes have been won by me with birds fed on your food:—Missel Thrush, fed from the nest on "Softbilo," Rochester Open Show, 1st and two specials, and Member's Cup for best cage bird; L. and P.O.S., 2nd and special in a strong class; Gillingham, 1st and special and Bowl for best British bird; Cambridge, 2nd in class of 15; Song Thrush, 2nd Rochester, 3rd Gillingham, 1905; 2nd Rochester, 2nd Gillingham, 3rd Tunbridge Wells; Pied Wagtail, fed on "Cecto," 4th Rochester, 3rd Gillingham, only times shown. I have also hand-reared 12 Redstarts on "Cecto" this year successfully.

James Clarke, Ascog Bank Lodge, Rothesay, January 11th, 1907.
I was first with a Yellow Wagtail fed on "Cecto" at Dunoon Show on New Year's Day. It is a grand food for small Softbills.

G. E. Weston, 307, High Holborn, W.C., June 27th, 1907.
A fair trial of the insectivorous food you sent me enables me to unreservedly praise it. I find the smaller insectivorous species eat it readily and thrive, while newly-captured specimens also take to it readily—a valuable point in its favour. For the larger species, when broken down a little, it is a very fine food indeed. Many of my Hardbills eat it with relish when damped with a spot or two of milk. Considering the quality of the ingredients, it is surprising how you produce the food at a 1s. per lb. It represents the highest possible value for money, I am sure.

Charles Conqueror, 68, York Street, St. Helens, Lancs., June 5th, 1907.
Will you send me 4 lbs. of your food for Larks and Thrushes? All my birds like it, and are keeping in grand health and song. It is the king of all foods for Softbill birds, and I will always recommend it to bird keepers round me. I shall never use any other.

V. Conway Gordon, Longley House, Rochester, January 31st, 1907.
Please send me 1 lb. tin "Cecto." I find it an excellent food, and my Tanager thrives on it.

Price Lists and Samples Free. *3,000 Corn and Bird Dealers sell our "SOFTBILO."*

BOOKS.

THE HYGIENE OF BIRD KEEPING.
By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.
Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C.
OPINIONS OF THE PRESS.
LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."
COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

WALSH, Bird Specialist, BLACKBURN.

HARRY ALLEN.
Champion of all champions. I am offering my book again on Linnets, how to moult and how to train them, and how to get them to sing with their wings down, and no Linnet fancier in the world should be without this book. To save further writing the price of this secret is 3/-, which I consider is the best value ever offered. I have for sale two house moulted Goldfinches, in show condition, and bred young Mules this year, singing very hard and the talk of Leeds' Bird Market; they have a splendid blaze; price 10/6 and 8/6; real bargains. Two nice cock Bullfinches, in full plumage, singing grand, 5/- each. Also a splendid Chaffinch, in full plumage and finger-tame, singing hard, price 3/-. I have six house moulted contest Linnets, singing with their wings down, four at 10/6 each and two at 15/- each; these are very cheap birds, and will soon make a name for their owners, and will sing in any window within one minute. Cock Linnets, singing grand, with cage and a packet of my special mixture and instructions how to feed, 4/6 lot; these are splendid birds. "9, Primrose-hill, Skinningrove. Dear Sir,—I am glad to inform you that the bird I received from you has won me two 1sts and two 2nds and one 3rd out of six contests, and I think if he goes on as he is now he will win some more, as he is a good bird, and I am highly satisfied with him. I have fed on nothing else but your special mixture, and I find it acts well.—W. Hodge to H. Allen." All my birds seven days' approval.—Harry Allen, 42, Brownhill-cres., Harehill-la., Leeds.

HOW BIRDS PROPOSE
Six artistic postcards showing the positions of some familiar British birds in courting poses. Specially drawn by well-known artists for the publisher, Mr. F. Finn.
Price 6d. per Set.
F. CARL, 154, FLEET STREET, LONDON, E.C.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins. June 22nd, 1907. N.C.O., Royal Engineers, Aldershot.—"Hummel arrived; delighted with it.—J. H. Mumford." "June 12th. Stobo Castle, Stobo, N.B. The Hon. Mr. Philipson has had the Hummel a week and will keep him; he is such a sweet singer." "June 24th. Ash View. Allmans Mold. I am writing to say I am delighted with the Hummel purchased a few months ago. Please send another.—R. James to Varney, the Great Hummel Importer." Sole proprietor and only importer of Hummel Rollers. Stratford, London.

ADAMS, 19, PARK PLACE, LIVERPOOL.

THE SAME OLD NAME, OLD FACE, and OLD ADDRESS.

Notice to Readers.—I am still at the same old establishment, and have been for over 60 years standing. There are plenty of dealers advertising my Australian stock as diseased. Why is the reason? They cannot sell their French rubbish while my imported stock is about. Bear in mind this is no long firm, and we actually trade in our own name. Zebra Finches, Zebra Finches. Handsome picked birds at 2/6 pair; a few rough-feathered at 2/- pair; but not diseased; in about two weeks they will be handsome. Australian imported Budgerigars, 5/- pair. Orange and Red-cheek Waxbills, 2/- pair. Bronze Mannikins, 3/- pair. Black-head Mannikins, 2/- pair, or six pairs 10/-. Imported Cockateels, the only class for breeding, 0/- pair. Major Mitchell or Leadbeater Cockatoos, handsome in colour, 20/- each. Solimon Island Cockatoos, 12/ each; splendid Lemon-crested Cockatoos, white as snow, 20/- each; also four splendid piping Crows, 25/- each. Hartz young Canaries, just as imported, 3/- for two. Real Dutch Frilled Canaries, 20/- each. Animals, etc.: 20 very fine rare Wallaby Kangaroos, one very large Barra Suiga Deer, two Tarrangulla Turkeys, direct from Australia. All birds are packed in newly-made travelling boxes, free of charge. P.O.O. please made payable Bethnal Green-rd. Note the address,

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

AFRICAN GREY PARROTS.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

THE CANARY MARKET OF THE WORLD.

Recently in certain London papers it was claimed that Germany ruled the Canary Market of the World, but your humble servant exploded this theory, although the reading public was not aware of this fact, as I had no desire it should be a cheap advertisement for myself. The Editor of this Journal can bear me out in this, as also can the Editors of the papers where this statement first appeared. I say that

Norwich is the Canary Market of the World !!

This is not meant as a reflection on Germany, as I have nothing but praise for Germany and its people; the former I like more every time I visit it, and from all classes of its people that I have come in contact with I have received the greatest courtesy and kindness, whether in business or otherwise, and mostly from complete strangers to me. But I want Old England to have what is due to her, and **"What we have we'll hold"!**

PURCHASE . . DIRECT . . . .

And save all intermediate Profits and delay, besides making sure of getting what you ask for. Any child can make a paper imitation, especially in prices, but they cannot imitate VALUE—that is where they get sadly left behind.

See the following Prices and read a few more unsolicited opinions. Many others of same dates open for inspection.

1906 Norwich Cocks, 5/6, 6/6, 7/6, 8/6 up; Hens, 2/-, 2/6, 3/6, 4/6; Pairs for breeding, 8/6 up; Yorkshires—Cocks, 5/6, 6/6, 7/6, 8/6, 10/6 up; Hens, 3/6, 4/6, 6/6 up; Pairs for breeding, 9/6, 10/6 up; Cinnamons, 12/6, 15/- pair; Crests and Crestedbreds matched for breeding, 10/6, 15/-, 20/-, 30/- up; Crested Cocks, 6/6, 7/6, 10/6 to 40/-; Crestedbred Hens, 5/6 each; Feeding Hens, 3/- and 3/6 each. I also have Scotch Fancies, Lizards, etc., in fine breeding condition. Border Fancy Cocks, 8/6, 10/6, 15/- each; Hens, 3/6, 5/6, 8/6; Pairs, 10/6, 12/6, 15/-, 20/-. These will go to nest at once, and are all high-class birds.

1/9 } 3/9 } **1907** { 1/9 3/9

Norwich or Yorkshire.—First round Cocks, 3/9, 4/6, 5/-, 5/6 each; Hens, 1/9, 2/-, 3/- each, or two Norwich Hens for 3/3; Pairs matched for next season's breeding, 5/9, 6/6, 7/6 per pair. These will grow into money.

For MY 6 months' approval terms send for particulars. This is not a mean, pirated or professional copyist advertisement; all birds here offered are **in my possession,** hence no delay and no three or four profits. This system, of which I am the founder, appears to have upset some people; but that is immaterial. **ALL** Cocks, 6 months' approval or otherwise, bear my stamp. This protects buyer and seller also, and does not allow the excuse, "This is not my Bird." My **6 months'** approval is a guaranteed first-class Songster, or exchanged for such, or money returned in **full.** But you must be able to rely upon me; if you cannot, do not have anything to do with it. This is plain, blunt English; but this 6 months will not be safe without you have full confidence with the person offering it. Hence I leave it to the public to judge; personally, I will say nothing about myself.

Read the following expressions of gratitude from delighted customers:

After travelling 200 Miles, etc.

24, Miranda-rd., Bootle, Liverpool. June 26th, 1907.—Many thanks for the Yorkshire cock, which arrived safe and in splendid condition. I must say he is a beauty, and after travelling 200 miles commenced to sing after being caged half-an-hour.—A. Lynes to W. Rudd.

Cannot say how pleased.

The Leicester Lounge, Leicester-square, London. June 24th, 1907.—Bird arrived here quite safe, and must say in splendid condition. In fact, I cannot say how pleased I am with it, and shall always have the pleasure in sending to you, for all my friends greatly admire him.—S. J. Coates to W. Rudd.

Very pleased with them.

The Lady J. Bathe.—June 27th, 1907.—Received goods, also Canary hen this morning, and am very pleased with them.

Another proof of Good Hens.

26, Picton-grove, Wavertree. June 24th, 1907.—I am pleased to say I have three eggs from hen got from you on the 12th of this month.—S. Barrowcliffe to W. Rudd.

Good for young Mules.

Stansted, Essex. June 28th, 1907.—Please send a tin of Eggertine, as I find it answers well. I have brought a nest of Goldfinch Mules up with it. Am pleased with the last two hens you sent me. The Yorkshire now has eggs.—F. Mascall to W. Rudd.

102, North King-street, Dublin. June 25th, 1907.—You may remember sending me two Norwich hens for muling some time ago. I am well pleased with both. One is sitting on four eggs and the other is rearing three young Mules.—J. St. John to W. Rudd.

Quite cured.

Victoria-rd., Oatlands Park, Weybridge. June 16th, 1907.—Please send a bottle of Asthmasine, as it has done a great deal of good to my Canary, which had asthma. It is quite cured now.—H. Carter to W. Rudd.

Doing well with Five Eggs.

30, Cambus-rd., Canning Town, London, E. June 25th, 1907.—Enclosed is P.O. for ———. I am pleased to inform you that the birds you sent me on the 4th are doing well. The hen is now sitting on five eggs, which I expect to come off in a day or so.—R. W. Goddin to W. Rudd.

Not eat other nearly so readily.

"Helm," Windermere. June 24th, 1907.—Will you kindly send me a half-crown tin of Eggertine by return post? I have run short of it, and my birds do not eat other egg foods nearly so readily.—E. Nurse to W. Rudd.

40, High Burton-street, Miles Platting. June 26th, 1907.—I received the Goldfinch and two Canaries, and am highly pleased with them. They are all in good health.—R. Eyres to W. Rudd.

Wishes he had sent sooner—(so do thousands of others.—W.R.)

218, Manchester-road, Walkden. June 6th, 1907.—The birds arrived quite lively after the journey, a lot more lively than any others I have sent for elsewhere. I am very much pleased with them. I wish I had only sent to you sooner. If I am in need of anything in the bird line you shall have the order.—H. Howard to W. Rudd.

PARROTS—Healthy Amazons, promising birds, 21/-, 25/-, 30/- each. Acclimatised Grey, accomplished talkers, from £5 5s.

To the SCEPTICAL

and those who only believe in old-fashioned methods.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size. The sale this season is phenomenal; never before has it been near so great, and this owing to its merit and merit alone. None other can compare.

It does not matter

WHAT YOU REQUIRE IN

Cages, Aviaries, Seeds, or Bird-room Appliances,

YOU SHOULD SEE MY 32 PAGE CATALOGUE

before deciding elsewhere. Sent free on receipt of postcard.

SINGING CONTESTS.

BLACKBURN.

The Blackburn Lark F.A. club contest was held at the Good Samaritan Inn, on June 29th, when three prizes were sung for. Mr. R. Sheffield's nomination again sang splendidly, winning the timepiece outright, having been first in two contests for the same. On the former occasion his bird sang through the whole of the ten minutes. The following are winners and times:—R. Sheffield, 9.48; J. Sheffield, 9.41; J. Hunt, 9.25.

There will be an open contest on Saturday next, July 6th, at the house of Mr. Holden, "The Cross Guns Inn," Guide, ten minutes banging, first bird to be hung at 2.30 p.m. prompt.—J. SHEFFIELD, Sec.

LEEDS.

Contest held at King's Head on June 29th, when seventeen of the best birds in Leeds sung for three prizes, given by Mr. J. Booth. Some very good singing was beard, to the delight of all present. 1st, Summers; 2nd, Hardcastle; 3rd, Wigfield. On June 30th twenty of the pick of Leeds sang before a crowded house from all parts of tbe country, when the best singing heard for a long time was enjoyed, and everybody was satisfied. 1st, Summers; 2nd, Hardcastle; 3rd, Crowtber. Judges, Messrs. Melia, Cooper, and Towers.—T. SUMMERS, Hon. Sec.

Usual contest at Skinners' Arms, Buslingthorpe, when 13 good birds competed for three prizes. 1, Galley; 2, Neat; 3, Dalton. Everyone satisfied that was present.—F. RAPER, Sec.

The members and friends of the Prince Albert Linnet Association met June 30th, to compete for three good prizes given by the landlord, Mr. J. R. Saynor. Tbere was a good attendance of visitors to hear the birds sing, but a poor entry, only 11 birds competing owing to a great many going into moult. Judges, H. Allen and B. Jackson. Result: 1, J. Chippendale; 2, W. Whitfield; 3, G. Richmond.—E. WOOD, Hon. Sec.

A Linnet Singing Contest took place at Timm's Coffee House, Skiningrove, on June 22nd, when some grand singing was done. 1, J. C. Havelock; 2, 3, M. Dobson. On June 29th six good prizes were given. 1, J. Calvert; 2, Long; 3, 6, Dobson; 4, Womack; 5, Hodge. F. Deadon, judge.—M. DOBSON, Sec.

SHEFFIELD.

At the Bird-in-Hand, Broughton Lane, Attercliffe, on June 29th, 27 birds sang for three prizes before a crowded house; two minutes' hanging. 1, Soldier Jack, 48; 2, Smedley, 45; 3, Smedley, 36. Club meeting at night; six new members, making a total of 19. Judges, Sweeney and Bollington.—F. WARSON, Sec.

LEIGH.

Contest for quality singiug held June 29th, at the Colliers' Rest, Westleigh Mill, Leigh, when 24 of the best birds from Leigh, Wigan, Blackburn, and Great Harwood competed for seven good prizes given by Mr. Joseph Edwards. The singing was very fair for the time of the year. The prize-winners were Mr. J. Mills, first and sixtb; Mr. J. W. Jones, second; Mr. D. Bentley, third; Mr. P. O'Neil, fourth; Mr. J. Edwards, fiftb; Mr. W. Barnes, seventh. The judges were Mr. T. Jump (Wigan), Mr. J. W. Jones (Leigh), and Mr. W. H. Topping (Blackburn); timekeeper, Mr. P. Wallin (Leigh). After the contest we enjoyed ourselves very mucb.

ACCRINGTON.

Lark contest at the Red Lion Hotel on June 29th; ten minutes' hanging; 13 birds competed for six prizes. Greenhalgh, 9-56; Jackson, 9-18; Hargreaves, 8-43; Sanderson, 8-35; Berry, 8-31; Berry, 5-31. Timers, H. Greenhalgh and J. Shorrock.—ALF. KNOWLES, Sec.

SALE OPEN O.S.

Meeting held June 24th. It was decided tbat all members' exhibits for the Nest Feather Show be staged not later than one o'clock. Owing to ill-health, Mr. T. Ellingham resigned the assistant secretaryship. Mr. J. Irlam was elected to fill the vacancy. Members' entries for the show, July 20th, must be made on the Monday nigbt previous, at the ordinary meeting.

EALING, HANWELL & DIS. F.S.

A well-attended meeting was held June 27th last. Mr. Kirkman gave a lecture on "Breeding for Colour," and by general request has promised to repeat it at a future date. Since the beginning of the year over thirty new members have joined the society. W. BIRD, Hon. Sec.
6, Broughton-rd., West Ealing.

THE SHOWS.

CITY OF BRADFORD O.S.

The First Feather Show in connection with the Members' Competition was held June 29th, club headquarters. Although not so large in numbers, the quality of the exhibits was very good. The bad breeding season with most fanciers about here accounts for entries not being so numerous as usual. Mr. W. Mann (Wibsey) judged, his awards being well received. CLR. OR TKD. YELL. YORKS., GREEN OR CINNAMON: 1, 2, 3, 4, Ludbrook; vhc, Wharton Bros.; c, Hartley. BUFF: 1, hc, Wharton Bros.; 2, 3, 4, vhc, Ludbrook; c, Lingley. UN. OR FOUL YELL.: 1, Lingley; 2, 3, Hartley. BUFF: 1, Lingley. NOVICE CLASSES, CLR. OR TKD. YELL. YORKS.: 1, 2, Fontnam; 3, Cowell; 4, Pollitt. BUFF: 1, 4, vhc, Horsfield; 2, 3, Fontnam; hc, Ramsden; c, Bateman. UN. OR FOUL YELL.: 1, Roberts; 2, Bateman. BUFF: 1, Horsfield; 2, Pollitt; 3, Warden. P. STANSFIELD, Sec.

DARLINGTON C. & B.B.F.A.

Members held their First Feather Show on Saturday, June 29th, at the George Hotel; judge, T. Cleminson (Darlington). YORKS. YELL.: 1, W. Sutton: 2, J. Cuthbertson; 3, E. Cuthbertson. YORKS. BUFF: 1, J. Cuthbertson; 2, E. Cuthbertson; 3, hc, W. Sutton; c, C. Cooper. NORWICH: 1, 2, J. O'Connor; 3, hc, C. Cooper; vhc, c, A. Stallard. A.O.V. CANARY: P. Wilcock, T. Metcalfe. BRIT. BIRD CLASS: 1, 3, vhc, Wildsmith and Hawkins; 2, C. Cooper; hc, T. Metcalfe; c, P. Wilcock.

POTTERIES C.B.A. AND CREWE O.S.

The first inter-club Nest Feather Show of the above societies took place at Stoke on June 29th, the splendid club room of the Red Lion Hotel being the venue. The show was a marked success, far surpassing any other show of the kind ever held in the district, both in numbers and quality. Norwich were a grand lot, some very fine youngsters being staged. Mr. W. Roberts won in clear yellows with an excellent specimen, in the pink of condition, which also captured the special for best Canary in the show, and well deserved the honour. In clear buffs, Mr. J. Pitchford accomplished the hat trick with a nice trio of promising youngsters, which should make up well. In marked yellows Mr. W. Yates led with a nice typical youngster of good quality, marked head and wings. He was closely pressed by Mr. Roberts with a bird marked very similar. Marked Buffs were a good class. Mr. C. Birks came out on top with a real good one, ticked on left eye, which was just caught at its best, but Mr. J. Rathbone was very close up with another nice youngster; the third was rather too young, and would do better in another week. Yorksbires were not so numerous as we should have liked to see them, but the quality would compare favourably with previous shows. The pick of this section was a really good clear buff, exhibited by Mr. G. E. Goodall. This was a very smart youngster, and ran a close race for the special, but was handicapped by a growing tail feather. Mr. J. Simcock and Mr. T. Crimes were also successful with birds of much merit. Mr. Hawley's birds were too far gone to do tbemselves justice. Mr. W. Yates staged two very promising Cinnamons, both of which could bave held their own in good company. Borders made a nice display, but competition was confined to Crewe fanciers, Mr. F. L. Handcocks having it all his own way. We liked the winning green marked buff very mucb. Goldfinches were a good class, and the winners well selected, but nothing standing out. Mr. W. Morgan and Mr. T. Crimes accounted for the opposition. In Brown Linnets Mr. T. Crimes won easily with a very fine specimen, in lovely feather. Mr. S. Potts was successful with a nice Bullfinch, and also showed a clinking Bramblefinch. The quality and condition of the British birds reflect great credit upon their owners, and the section proved very attractive to visitors, who, by the way, rolled up in good numbers, so that the venture should result in a substantial addition to the funds of the Potteries Club. A good number of the Crewe fanciers visited the show, and expressed their appreciation of the way in which the arrangements were carried out. The special for most points (a handsome tea service) in the show was won by Mr. J. Pitchford, with a total of 29 points. The awards were made by Mr. F. Bate, who gave every satisfaction. NOR. YELL.: 1, spl, Roberts; 2, vhc, Rathbone; 3, Pitchford; hc, Crimes; c, Birks. BUFF: 1, 2, 3, Pitchford; vhc, Roberts; hc, Rathbone; c, Crimes. MKD. YELL.: 1, Yates; 2, vhc, Heaton; hc, Ibbs. A.O.V.: 1, Bowker; 2, Bettley.

NORTH LONDON C.B.A.

The First Feather Show of tbe North London C.B.A. was held in the Public Hall, Stoke Newington, on June 29th, and was quite the best in the history of the Association. The entries were 34 in excess of last year's figures, whilst the quality was far in advance, especially in the Norwich section. This advance was not seen so much in one or two birds standing away from the rest as in a general levelling up right through the classes. Messrs. Morris and Hodder had a hard tussle in the Champion Norwich, the latter getting the best of it in the number of class awards, but missing the coveted specials. Each showed some lovely birds, combining type and quality. Messrs. Sweetman, Rennie, and A. B. Forse each put down a nice team of Yorkshires, and in each team were to be seen dissimilar characteristics. Mr. Sweetman's excelled in length, Mr. Rennie's in feather, and Mr. Forse's in shape and general quality; we liked the latter's second yellow very much, and had it possessed just a bit more length the awards would doubtless have been different, but Mr. Sweetman had that little bit extra in leg and reach which is so much in a Yorkshire. There was no competition in the Amateurs, Messrs. Cawthorne and Andrews, who each staged some useful looking birds, having the fight all to themselves in their respective classes. Those Novices again! The Novice Norwich at Stoke Newington were the section of the show, numbers and quality both being splendid. Messrs. Morley, Williamson, Morgan, Richardson, and Harper all staged most creditable exhibits, several of which would have pushed the champions very hard. In the Yorkshires Mr. Penton was the most successful exhibitor, and he, with Messrs. Spiers, B. F. Forse, Rowson, and Mrs. Morris are to be congratulated upon the quality seen in these classes. Crests and Crestbreds provided no competition. Some very choice birds were to be seen in the British section, and amongst the exhibits which filled our eye most we must mention Mr. Baldry's Redstart, Mr. Leclair's Whitethroat, Mr. Pike's Linnet, the Siskins of Messrs. Cawthorne and Marley, and the veteran Mortlock's Goldie. These were all of the "smart set." The exhibits were nicely staged, and Mr. Harper and his committee are to be most highly complimented and congratulated upon the good work the N.L.C.B.A. is doing, and the progress it is making. Mr. J.R obson judged.

CHAMPIONS, NOR. YELL. (8): 1, res., vhc, 2 spls, Morris; 2, 3, Hodder. BUFF (9): 1, res., Hodder; 2, 3, vhc, hc, 2 spls, Morris; c, Leclair. VAR. (4): 1, 2, 3, Hodder. YORKS. YELL. CHELTENHAM C.B.S.

The members of the Cheltenham C.B.S. held their First Feather Show on June 29th, in the Victoria Rooms. Entries did not come up so well as last year, the poor breeding results met with by several of the members no doubt being the cause. There were a few nice exhibits staged, which will no doubt give a good account of themselves later on. We thought the marked buff Norwich Plainhead of Mr. Gwilliams about the best in the show, and had there been a special for best bird we think he would have annexed it. It looks like a bird with a future. The exhibits were nicely staged, the light was good, and a goodly number of visitors attended the show. The Hon. Secretaries, Messrs. Treasure and Hope, had everything in good order, and had the prize cards up as soon as each class was judged. Mr. W. H. Kilmister made the awards. CREST. CL. BODY (2): 1, Hands, dark, nice frontal crest, good back, trifle open in centre, nice droop; 2, Maddocks, grizzle, not quite so long in frontal crest. GREEN, ETC. (8): 1, 2, Hands, pied tail Green, well filled thick crest, good droop and radiation, smooth back, well filled centre, second not so wide in frontal crest, good droop, centre well filled; 3, hc, Treasure, ticked on thigh, nice dark crest; 4, Roylance, nearly green, nice round crest, good at back, bit short in frontal, we made third; vhc, Hands. CRESTBRED CL., ETC. (2): 1, Roylance, good shaped skull, nice entrance and body, fairly dense head feather; 2, Maddocks, good in shape of skull, bit gone in neck. GREEN, ETC. (10): 1, Miles, grand length of head feather, rare back skull, big body, full neck; 2, hc, Hands, rare cushion-shaped skull, wide entrance, good length of head feather; 3, Miles, slashing shaped body, full neck, nice length of head feather and good skull; 4, vhc, Roylance, good body and head feather, not so wide in skull; c, Brydes. NOR. CL. YELL. (5): 1, Gwilliam, good colour, nice quality of feather, shapely body, little long in flights and tail; 2, Merchant, pale colour, nice feather, good back, neat head; 3, Hiam good shape, full chest, nice head and neck, we think will be a buff; 4, Childs, nice feather and colour; vhc, Hadley. BUFF (5): 1, 2, Stephenson ,good shape, colour, and feather, nice head and neck, level back, good wings and tail, second good colour, nice shaped body, good head, not so good in feather as the leader; 3, Hiam, pale in colour, nice feather, neat tail, shapely body; 4, Childs, good shape and feather, neat head, nice wings and tail; vhc, Barnes. MKD., ETC., YELL. (6): 1, Gwilliam, cap mkd., nice shaped body, splendid quality of feather, good colour, fine back and chest, bit long in head; 2, Stephenson, cap, neck and rump mkd., grand shape, clean cut, nice colour, and feather, minus a few tail feathers, which may have let it down; 3, Hadley, neck tkd., nice shape, good flights and tail, nice colour; 4, Barnes, vgtd., nice shape and feather, good colour, crosses wings a bit at tips; vhc, Houghton; hc, Childs. BUFF (10): 1, 2, Gwilliam, mkd. left wing, eye, and neck, most beautiful quality of feather, splendid shaped body of good size, nicely cut away behind and gets well over perch, wings well braced, tail neat and closely packed, grand songster, second mkd. wings and neck, again beautiful quality of feather, nice shape, short flights and tail, neat head, looks like a hen; 3, Barnes, mkd. left eye and wing, beautiful shape, nice back, gets well over perch, bit slack on chest; 4, Merchant, saddle mkd., nice feather and short flights; vhc, Stephenson; hc, Houghton; c, Hiam. A.O.V. (1): 1, Maddocks, nice ticked buff Yorkshire, on the small side.

WIMBLEDON C.B.S.

The third annual Young Bird Show was held on July 1st, at Headquarters, 6, The Broadway, and proved a very pleasant and successful fixture. A good number of birds (83) was staged, and the quality right through the classes was of a high order. The champion Nor. classes did not bring out many birds, but Messrs. Wheeler and Lupton and Jordan staged some most promising youngsters. In the Yorks., too, Mr. Wheeler was prominent, though Mr. H. Smith got in front of him in the buff class; both fanciers put down typical specimens. The amateur section was exceptionally strong in Yorks., and Miss Walker and Messrs. Wall, Warley, and McLaughlin carried off the principal honours after a keen struggle. The Nor. were good in quality, and the popular Hon. Sec., Mr. Colman, got well amongst the prizes herein, almost evenly dividing them with Mr. R. Porter. The novice section could fairly be described as promising, so far as quality went, though the "beginners" did not stage any great number of birds. Mrs. Piper and Mr. Tutty in Nor., and Messrs. Found, Page, and Silverthorn in Yorks., did well. An excellent collection of Mules, British, and Foreign birds was put on view by the members, and proved a great attraction. Messrs. McLaughlin, Page, Standage, and Stoakley secured the premier awards. The exhibits were very nicely aranged, and the venture reflected every credit on the capable Hon. Sec., Mr. W. H. Colman, and his helpers. They were favoured with a goodly attendance of fanciers and friends. Mr. J. Robson judged. CHAMPION NOR. YELL. (4): 1, 2, vhc, Wheeler; 3, Lupton and Jordan. BUFF (5): 1, 2, Lupton and Jordan; 3, vhc, hc, Wheeler. YORKS. YELL. (7): 1, 2, 3, Wheeler; vhc, hc, c, Smith. BUFF (8): 1, 3, hc, Smith; 2, vhc, c, Wheeler. AMATEUR NOR. YELL. (4): 1 3, Porter; 2, vhc, Colman. BUFF (5): 1, 2, hc, Colman; 3, vhc, Porter. YORKS. YELL (8): 1, McLaughlin; 2, hc, Dell; 3, Warley; vhc, Porter; c, Miss Walker. BUFF (14): 1, vhc, Wall; 2, Miss Walker; 3, c, Warley; hc, McLaughlin. NOVICE NOR. BUFF (3): 1, Tutty; 2, 3, Mrs. Piper. YORKS. YELL. (5): 1, 2, Found; 3, Silverthorn; vhc, hc, Leonhardt. BUFF (6): 1, Found; 2, 3, Page; vhc, c, Wyatt; hc, Leonhardt. A.O.V.: 1 Archer. MULES (3): 1, 2, Standage. BRITISH (7): 1, 2, McLaughlin; 3, Page; vhc, Tutty; hc, Standage. FOREIGN (4): 1, 2, 3, vhc, Stoakley.

THE ORIGINAL CROOK C.B. & R.S.

Annual Table Show held June 29th, at the club room, Crown Hotel, when close on 100 entries of good quality were benched. The show was in every way a great success. The proceeds go towards buying cups for the Open Show. Messrs. Rand and Siddle and Dawson won the members' specials with a Yorkshire and Crest respectively. Mr. George Sweet (Willington) judged. NORWICH: 1, Siddle and Dawson; 2, T. Richardson; 3, F. Brown; 4, Jas. Brown. YORKS.: 1, spl, A. Rand; 2, R. Elliott; 3, A Rand; 4, Siddle and Dawson. CREST: 1, 2, 3, Siddle and Dawson. NOVICE: 1, A. Rand; 2, T. Richardson; 3, P. J. Keogan; 4, Jas. Brown. BRIT.: 1, 2, 3, J. Dohinson; 4, F. Brown. OLD BIRDS: 1, spl, Siddle and Dawson; 2, Siddle and Dawson; 3, R. Elliott; 4, Walt. Brown.—A. ROWES, Sec.

ASHTON-UNDER-LYME & DIS.

Table Show of Yorkshires. There was a very good entry, and Mr. C. R. Schofield, of Mossley, placed the cards, with general satisfaction, as follows:—1, 2, Foden; 3, Grayson; 4, c, Rosa; vhc, hc, Clayton. E. FODEN, Hon. Sec.

SHEFFIELD.

This Nest Feather Show took place on June 29th. The Montgomery Hall was utilised for the purpose. The room in which the birds were staged gave ample satisfaction. The attendance of fanciers and visitors, especially during the evening, pointed very much towards the function being of a most successful nature. The classification provided was for members only (ten miles radius), and a capital entry was obtained, considering the general outcry of this being a poor breeding season. Total number of birds, 228. The Yorkshire proved to be most numerous, and several very taking exhibits one brushed up against. The yellow owned by Mr. W. H. Spencer has every appearance of developing into a "right 'un," should the moult treat it kindly. The buff shown by Mr. A. Bradwell was also of a very neat order, also a bird to be admired was the ticked buff staged by Mr. H. Giddall. In the Norwich section, Mr. T. Hemmings had on view a marked headed yellow cock, of lovely shape, nice size, and fine silky feather, and with luck should be heard of again. Mr. G. Moore also put down a very pleasing buff cock, which with a little more time will improve greatly. Crests and Crestbreds were only small in numbers, Messrs. J. W. Crookes and J. M. Emmott answering for most of the spoil, with birds possessing good merit. British turned up fairly well. The Grey Wagtail shown by Mr. T. Bishop was a topper, not a feather out of place. This bird was the admiration of all, as was a lovely Greater Whitethroat (same owner), also a fine Nightingale and a Wheatear, the property of Mr. P. Walsh, a couple of exhibits beautifully put down and capable of beating more than beat them. In the Novice classes, the exhibits of Messrs. Whitaker, Furniss, Bishop (T.), Bower, Rodgers, Walton, Booth, and Clayton were a nice sample, giving credit to their breeders. Medal presented by Mr. J. C. Barnes for most points gained in these classes was captured by Mr. H. W. Walton, he showing a nice team of birds. Special for best Mule in show went to Mr. A. Somerfield, a buff Greenic-Can., full of promise, doing the needful. Other special winners were: Messrs. Spencer, Holt, Memmott, Crookes, Bishop (T.), Bingham, Walton, Rodgers, and Windle. Special prize given by Mr. W. Kelly to best bird shown by a first-year novice went to Mr. E. Johnson. Mr. T. Bishop (secretary) worked like a trojan, and is the right man in the right place, and much of the success of the show is due to the exertions he put forth. Judges were Messrs. W. Oxley, W. H. Dyer, T. Tow, and R. Colton. Mr. W. Kelly (president) and Mr. A. Bradshaw (vice-president) assisted greatly, and proved themselves a couple of most useful officials. Four very prettily-chased silver cups were on view, which are to be competed for at the Annual Show in November, which no doubt will command entries and create keen competition. YORKS. YELL. (7): 1, Spencer; 2, 3, Siddall; 4, Drabble; vhc, Binge; hc, Emery; c, Turner. BUFF (9): 1, Bradwell; 2, Spencer; 3, Emery; 4, hc, Siddall; vhc, Binge; c, Turner. TKD. YELL. QUEEN'S PARK C.B.A.

This Young Bird Show, held June 27th, was well patronised by members and visitors, and the management can congratulate themselves on a very successful show. Seventy-four birds were staged, the quality being good throughout, the Yorkshire contingent being a very fine lot, the champion class producing 14 exhibits and the novices 29, which contained a very level lot of birds and gave the judge some work in awarding the prizes. The only regrettable incident in connection with it was that Mr. L. Daintry, who has been a member since the society was started, announced that he was retiring from the Fancy and leaving the district. This will be a great loss, as he has given a great deal of his time in acting as steward at the shows, and also in his attendance at the meetings and valuable advice. We take this opportunity of recording our thanks for past and present favours, and wish him and Mrs. Daintry the best of health in their retirement, and if the fanciers of the various societies who are equally indebted to him wish to record their appreciation of Mr. Daintry's worth, we shall be pleased to identify ourselves with them for that object. Mr. Robson judged. CLASS I (5): 1, 2, Lethbridge; 3, vhc, Bassett. CLASS 2 (3): 1, 2, Lethbridge; 3, Bassett. CLASS 5 (4): 1, 2 spls, Churchard; 2, Lawrence. CLASS 8B (1): 1, spl, Bryant. CLASS 9 (7): 1, 2, Daintry; 3, hc, Hawes; vhc, c, Easterling. CLASS 10 (7): 1, vhc, c, spl, Daintry; 2, hc, Hawes; 3, Easterling. CLASS 13 (26): 1, hc, spl, Lewis; 2, vhc, Maisey; 3, Lawrence; vhc, Batchelor; c, Rogers. CLASS 14: 1, vhc, hc, c, Menhennet; 2, 3, Lewis. CLASS 15 (2): 1, 2, Bassett. BRADFORD WEST CAGE BIRD ASSOCIATION.

The above most prosperous and vigorous Cage Bird Association held an excellent exhibition of young Canaries in the Whetley Board Schools last Saturday week. The entries numbered close on 170, and that hard-headed Yorkshireman, Mr. H. W. Battye, judged with his usual conspicuous care and judgment. The quality of the winning birds, and, indeed, that of many of the card exhibits, was of the highest, and we shall look to see in the more serious competitions of the year many of these birds in the prize lists of the Open Shows. The attendance during the Show left nothing to be desired, and the management was of the best. The Secretary is a courteous, hard-working official, and the committee, which comprises several well-known fanciers, did their utmost to ensure success, which undoubtedly rewarded their efforts. The Clear Yellow Yorkshire class contained some promising youngsters of excellent type. We particularly admired the second bird, which carried itself wonderfully, was of grand shape, and very stylish. The winner in this class was a good quality, finely moulded, shapely young Yorkie, with grand head and back. In the clear buffs, first and special went to a bird of exquisite feather, plenty of leg and straight as a ram rod, a bird of most pleasing characteristics. The second bird in this class possessed grand wings and tail, was well up on leg, and of lovely quality. The ticked yellows were a hot lot. First and special had lovely shape and feather, was as straight as a rush, and had very neat carriage. The buffs were an equally good collection. First and special was shown in excellent condition, was of rare quality and style. In the unevenly marked class first and special went to a lengthy, grandly drawn bird of rattling shape and feather, and in the heavily marked class the winner left nothing to be desired in either shape, position, feather, or length. In the cinnamon marks the yellows were a particularly fascinating section, first prize going to a bird ticked wing and head, stylish shape, straight as a pencil, beautifully feathered, and the best of carriage. The winner in the buffs had very nice carriage and feather, was well up on leg and beautifully slim. Many of the birds with cards will undoubtedly change places with their more fortunate competitors after the moult. In the Norwich some fine big promising youngsters were to be seen. British were not remarkable for numbers, but contained several very excellent specimens. In the novice classes the winners were exceedingly typical, full of quality, and quite all there.

YORKS. CL. YELL. (11): 1, spl, Smith and Sharp; 2, Wood; 3, Midgley; 4, Holmes; vhc, Murgatroyd and Son; hc, Whittaker; c, Wilkinson. CL. GLASGOW & WESTERN COUNTIES NOR., CAN., MULE, BRIT. & F.B.C.

The usual monthly meeting and last Table Show for the season of the Glasgow and Western Counties Norwich Canary, Mule, British and F.B.C. was held at 122, Ingrave-street, on June 29th. The President, Mr. Peter Pettigrew, presided over an extraordinary large attendance. The following new members were admitted, viz.: Messrs. Thomas Ferguson, 76, Hill-street, Glasgow; David Buchanan, Glencairn-street, Motherwell; Matthew Cairns, 220, Thistle-street, Glasgow. Owing to the backward season, twelve classes were considered adequate for First Feather Show, the judge for same being Mr. Jas. Laurie, Govan. Seventy-seven classes were approved of for Annual Club Show, 7th December next, while the judges selected were Messrs. John Young, Rutherglen; Jas. Lappin, Rutherglen; John Taylor, Greenock. It was decided that no person could become a member unless he took the precaution to join eight weeks previous to the Club Show, 7th December, so that anyone desirous of becoming a member can have particulars from J. H. Adam, 15, Alexander-street, Sandyford, Glasgow. As no meeting will be held during July it was decided to have a ramble to Lord Eglinton's estate, Kilwinning, Saturday, 27th July, of which due notice will be found in the Fancy Press. Messrs. Smith, Hobson, Young, and Adam adjudicated the monthly show with much acceptance. Show results:—LIGHT MULE OR HYBRID (10): 1, McFarlane, even marked light Mule, the City of Glasgow winner, shown in faultless trim; 2, Malcolmson, Goldfinch-Greenfinch Hybrid, grand colour, fails in size, staged to perfection; 3, spl, Pettigrew, even marked Goldfinch Mule, good blaze, might have gone on up had he been rubbed; 4, Marlin, Redpoll-Greenfinch Hybrid, lively little chap, deserved his position; vhc, A. Roulstone; hc, Jack; c, Gadsden. DARK MULES (16): 1, Cassels, Goldfinch Mule, grand substance and colour, a rattling good exhibit, shown in the pink, staged A1; 2, Whitelaw, Goldfinch Mule of the Yorkshire persuasion, good colour, and well put down; 3, Rodie, Linnet Mule, good size and colour, presses hard; 4, Jack, Goldfinch Mule, fails in blaze to leaders, still a good one; vhc, spl, D. Hamilton, Twite Mule, grand condition and feather; hc, Marlin; c, spl, Lawson. BRIT. LARGE (9): 1, Fulton, Magpie, a real top sawyer, grand condition, very steady, well put down, a credit to you, Mr. F.; 2, Henderson, Harry, Song Thrush, a good one, very steady, well defined spangles, must have pressed the winner hard; 3, Pettigrew, Hawfinch, good sound colour, grand condition, well staged, "auld yin"; 4, Marlin, Jay, grand whiskers and condition, a rather nice exhibit; vhc, A. Roulstone; hc, spl, Harry Henderson; c, Cairns. FOR. (7): 1, Edwards, Yellow-fronted Amazon, in grand feather, a chatty fellow, champion whistler and mimic; 2, Lawson, yellow Budgerigars, in A1 condition, staged in grand style; 3, Pettigrew, Grey Parrot, shown in grand feather, was a bit cheery like his owner; 4, spl, Connelly, Blue-fronted Amazon, in clinking condition, grand whistler; vhc, Marlin; hc, A. Roulstone; c, Jack.

SCOTTISH CREST CLUB.

Committee meeting held in Nelson Temperance Hotel, Glasgow, June 29th. Present: Messrs. J. McLay, H. Moreland, G. McPhail, G. Shillinglaw, W. Griffiths, and Secretary. A note from Mr. H. Moreland, resigning his office on committee, was accepted; seeing he is one of the Vice-presidents he can have access to all meetings. Mr. Robt. Adamson was elected in his place, he being the next highest on the official voting list. The show cage drinker that was selected by the club was one sent in by Mr. J. F. Dewar, Edinburgh. The Kilmarnock Association are willing to grant the same classification as that at Perth last year, or they are willing to consider any further request. Mr. John Young has been appointed judge, which meets with the unanimous approval of S.C.C. committee, as he stands highest on the official voting list for that position. Mr. Jack, 13, Dundee Terrace, Edinburgh, was elected a member. The Secretary was instructed to send subscription circulars along with the classification list as early as possible. The next meeting to be held on September 23rd.

J. CHALMERS, Sec.

HAMILTON CADZOW OAKS O.S.

Meeting held Royal Hotel on Saturday, Mr. Shearer in the chair. The first business was the classification for the Open Show. It was decided to give Plainheads nine classes, Crests two, Borders fourteen, Mules five, British and Foreign sixteen. It was decided to hold an Open Young Bird Show in Royal Hotel, July 13th, birds to be staged by 4 p.m.; prize money, 5/-, 3/-, and 2/-; entry fee, 9d. each bird, including specials, Messrs. Marlin, Shearer, and Gadsden guaranteeing the classes, and will pay prize money in full after judging. Messrs. Marlin (Hamilton) and Jno. Young (Rutherglen) will judge. Six classes are provided—two for Plainheads and four classes for Border Fancy. The exhibition will close at 7 o'clock, to be followed by a smoking concert at 7.30 p.m. I shall be pleased to send a schedule to any fancier applying for one.

R. GADSDEN, Sec.

CRESTED CANARY CLUB.

Result of the voting:—(1) Shall the Crested Canary Club become affiliated to the Cage Bird Union?—Yes, 18; No, 52. (2) Are you prepared to adopt a closed ring for all young birds?—Yes, 28; No, 36. (3) Are you agreeable to register the birds you breed?—Yes, 38; No, 23. (4) Will you agree that all purchasers of exhibition stock be compelled to give the name of the breeder for publication in the show catalogues immediately following the name of exhibitor (as with horses)?—Yes, 47; No. 20. Seventy-seven voting papers received; 70 in order; one received unsigned; six arrived too late. (Signed)

T. HEATH,
ROBERT E. NORTH.
Clerk to the above, for J. S. Clarke.

SPECIAL WINNERS AT THE L.C.B.A. YOUNG BIRD SHOW.

The special prizewinners were Messrs. Wynn, Daintry, Lazarus, Hart, Neal, C. H. Cooper, Franz and Mrs. Litchfield (points specials), C. W. Baker (most points in show), R. Blackburn (most points first-year novice Crests), Mrs. Litchfield (best novice Nor.). The judging competition resulted as follows:—Champions: 1, 2, divided between Mr. W. H. Mugford and Mr. A. G. K. Robinson, with 21 points each. Mr. Rennie and Mr. Bennett also tied for third, with 15 points each. Amateur: 1, Mr. J. Carson, with 17 points; 2, Mr. A. W. Hart, 14 points. Novice: 1, Mr. G. B. Lewis, with 25 points; 2, Mr. A. C. Lucas, 24; 3, Mr. H. Trussler, 23; runner up, Mr. G. H. Neal, 21.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

W. O. BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate.

A. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.

CAMBRIDGE 'MAMMOTH' SHOW —Bank Holiday— Aug. 5th, 1907. Splendid Classification for all Cage Birds. Judge: Mr. JACON MACKLEY, Norwich. **Good Prize-Money for Small Entry Fee. Handsome Challenge Cups and Heaps of Specials.** Prompt payment. **Entries close July 27th.** Schedules:—W. Driver, 17, Sussex Street.

DON'T FORGET

CHURCHDOWN

Show, August Bank Holiday.

SCHEDULES on application to E. J. TRESEDER, Hon. Sec., Churchdown, Cheltenham.

BEGINNERS · READ THE ANNUAL.

The Show of the Kent County Cage Bird Association has been fixed for October 2nd and 3rd. Mr. Geo. Gardner will judge.

There seems every prospect of an excellent show at the City and Suburban A.C.B.'s headquarters to-day (Saturday), the Secretary, Mr. Wynn, notifying us that an entry of 182 birds has been received (incuding 75 British).

Fanciers will learn with regret, writes Mr. John Tyson, that owing to indisposition, Mr. J. S. Clarke was unable to perform the duties as one of the scrutineers for the voting on the Crested Canary Club, and all will wish him a speedy and complete recovery.

Applications for the patrouage of the Kent County Cage Bird Association should be made to the Hon. Sec. before July 31st, as after that date none can be entertained.—GEO. SANDERSON, Hon. Sec., 208, Folkestone Road, Dover.

The London and Counties Association of Canary Breeders' Young Bird and British Bird Show will be held on Saturday next, the 13th inst., at the "Bay Malton," Great Portland Street, W., a few minutes' walk from Portland Road Station or Oxford Circus.—ADVT.

The Nest Feather Show of the Watb Society is to be held on July 27th, Mr. G. Browning (Rotherham), as judge. I am sorry to say that the breeding season up to the present has been very poor in this district. Hope we may have better luck on the last round.—H. H. BRAMHAM, Hon. Sec.

The First Feather Show of the Northern Yorkshire C.C. is to be held in the Co-operative Assembly Room, Newgate Street, Newcastle, on August 3rd. Mr. F. Armstrong will judge the five classes provided. Mr. Crawhall asks us to request members to let him know at least the day before how many birds they are sending.

From Norwich we learn that Mr. W. Rudd, the well-known bird specialist, has lately sent consignments of birds, food and appliances to the following places abroad:—Natal, Canada, Grenada, Messina, Gibraltar, United States, Holland, Switzerland, Sweden, Trinidad, and East London (South Africa). This, with a largely-increased volume of home trade, has made things pretty lively at Mr. Rudd's establishments.

After taking CAGE BIRDS in, I thought I would try Mule breeding, writes Mr. T. D. Coley (Walsall). Last year I had a house-moulted brown Linnet with a Roller hen, and had one nest of young (three). When two days old the cock died, but the hen reared all three, and they were all cocks. This year I have had one cock Linnet with three Roller hens, with this result:—12 grand Mules and two hens still nesting.

At the Barrow and District C.B.A. Annual Nest Feather Show, on July 13th, writes Mr. W. Willison, the Sec., two silver cups are competed for, one for the best Border, and the other for the best bird in the show, which makes a very exciting competition. There are also three classes for novice members who have never won a prize before, which gives the latest recruits a chance of winning a prize. Mr. J. H. Winn (Lancaster) will judge.

Leeds Cage Bird Society hold their Members' Young Bird Show on Saturday, July 13th, in St. Luke's Schoolroom. Judge, Mr. Oates. The Leeds and President's Cups will be competed for; four birds to be nominated for Leeds Cup, six for President's. The four for Leeds Cup can, of course, form part of the six for President's Cup. Mr. Ramsden is giving a paper on "Norwich Plainhead" at our monthly meeting on Saturday, July 6th. All fanciers are cordially invited.—STEPHENSON and HORNBY, Hon. Secs.

Lancashire and Lizard F.A.

At the next meeting, held August 3rd, at the "Boar's Head Hotel," Stockport (Mr. F. Nelson's), all applications for the club's patronage will be dealt with. Societies should apply for it before that date, to save disappointment. Members' subscriptions are due, and should be paid as early as possible to enable us to purchase specials, etc. Novices kindly note that they will be again specially catered for. Full particulars from the Secretary.—H. OLIVER, 35, Hadfield Street, Glossop.

A Simple Device.

Spratt's Patent, Ltd., are issuing a new registered label, which they have adopted for sending exhibits to shows. The advantages of these duplicate labels over the old method of single labels will at once commend itself to all exhibitors, as they facilitate the despatch and safe return of exhibits from shows, dispensing with the tedious operation of reversing the labels under the old system. Messrs. Spratt, in writing us anent these labels, say: "We are always willing to effect any improvements possible in the interests of exhibitors and shows generally, and, although it will entail increased expense to us, we shall be glad if you will mention in your next issue that in future this new pattern will be sent to show secretaries, free of charge, in place of the ordinary single labels previously provided by us."

At Leek Show, on October 16th, Mr. J. Bertie will officiate as judge.

Halifax First Feather Show will be held on July 13th. Mr. Matt. Broadley will judge.

Leek First Feather Show, on July 13th, is open to a radius of fifteen miles, Mr. Fowler, the Hon. Sec., informs us.

Mr A. Wellings will judge—July 13th, Altrincham; July 20th, Widnes; December 6th, Belfast; December 13th, Barrow-in-Furness.

Falkirk First Feather Show will be held in the Oddfellows' Hall on July 20th. Mr. J. Jeancs will judge. Members joining now will be eligible to compete.—W. CLUBB, Hon. Sec. (14, Cockburn Street, Falkirk).

I cannot speak in too high praise of CAGE BIRDS. I would much rather do without my breakfast on Friday than CAGE BIRDS. I have nine promising young Canaries, and hopes of more. I am as yet only a novice. I am praising your paper to all interested in birds.—T. B. ALEXANDER (Greenhithe).

I have never kept birds before this season, and I consider I have had very good luck, as I have now 16 young Canaries from two pairs, and I have found many a guide in your paper that has been useful to me; and two questions which I asked were answered in a manner which has been very beneficial.—D. HANDFORTH (Gorton).

At the inter-club show held at Stoke on June 29th, the Potteries Club scored 124 points, against 77 scored by the Crewe Society, the visitors thus losing by 47 points. No doubt a strong effort will be made by the Crewe fanciers to reverse this result when the return fixture takes place at Crewe on July 27th. Mr. A. C. Brotherhood is to judge.

The first volume of the BIRD WORLD is now ready. This volume contains the first six numbers, with coloured plates and numerous illustrations, making one of the most fascinating books of bird literature ever published. Price, cloth bound, 2s. 6d. Cases for binding are also ready, price 1s. post free.—MANAGER, "Bird Word," 154, Fleet Street, London, E.C.

The City and Suburban A.C.B.'s splendid show of young Canaries and Hybrids, British and Foreign birds, can be easily reached by rail (Metropolitan or Bakerloo), motor-bus, etc. All London bird-lovers should pay a visit to-day (Saturday, July 6th). The Church Institute, Paddington Street, off High Street, Marylebone; open 2 p.m.—ADVT.

Intending purchasers of Ramsden's pure peppers are respectfully requested to note that his premises will be closed from mid-day Friday (July 12th) to mid-day Tuesday (July 16th). Orders arriving after the first post on Friday, 12th, will be executed on Tuesday, 16th. A list of traders stocking Ramsden's 1907 peppers will be found under "Foods" advertisement in this issue.—ADVT.

Pelican City.

One of the most wonderful bird colonies in the world is on Pelican Island, Florida. This is a low island without cliffs or rocks, and thousands of Pelicans nest there and rear their young ones. They have at times been ruthlessly robbed and almost destroyed, but still remain faithful to this stretch of land.

Still Sitting.

It will be a disappointment to many Nottingham people who have been watching the sitting Swans at the Arboretum to learn that there is now no hope of any little Swans arriving this season. At first, we hear, there were four eggs, but two got accidentally pushed out of the nest into the water, and the other two are a fortnight overdue, though the birds are still sitting.

Would it?

Some gardeners use a variety of washes during early spring, and some of these are poisonous, says a writer in the "Journal of Horticulture." It is presumable that they may be partly absorbed by the tissues of the young buds. Now, any bird attacking buds would certainly avoid all those that had in them anything odorous or saponaceous; but, supposing a solution of arsenic had moistened the buds, would a bird detect this poison therein? I rather think it would.

Whitehaven's Tippling Goose.

I had occasion last week (writes a correspondent of the "Catholic Herald") to visit Whitehaven for the first time, and I found there an institution that I am quite unacquainted with in any other place—a fine brown-and-white Gander stalking unconcernedly down one of the main streets, followed by a small party of children, who occasionally stroked his neck, an operation to which he submitted himself, as it seemed, quite gladly. I hastened to ask whose Goose it was. "Oh," said a man, 'it's Barney, the town Goose, of course. I shouldn't be surprised if he's going for his beer." "Going for his beer?" "Yes," said the man, with an amused look, "he's a great pet in Whitehaven. The miners have taught him all sorts of queer things; there's some have given him a taste for beer; he's been seen quite drunk. He knows which houses give it him well enough."

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

*Oct. 4 and 5.—**Burnley** (J.H.R.)
*Oct. 10.—**Peterborough C.B.A.**
*Oct. 11 and 12.—**Great Harwood** (J.P.H., D.B.)

"THE STANDARD WORK."

HOUSE'S

CANARY MANUAL

Price ONE SHILLING. Post Free 1 2.

Superbly illustrated by the Champion Canary Artist Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

F. CARL, 154, Fleet St., London, E.C.

IN THE COURTS.

NOTTINGHAM BIRD DEALER SENTENCED.

Nine Months' Hard Labour.

Long Series of Frauds.

At the Derbyshire Assizes, the case of the Nottingham bird dealer, Henry Tindall (reported at length in our issue of April 13th last), came on for decision. The "Derbyshire Times" prints the following report of the case:—

Through a transaction in birds which John Burge, a grocer's assistant, of Whittington Moor, had in the end of last year, he has been the means of exposing a long series of petty frauds carried on by a man named Henry Tindall, a bird and dog dealer, of Nottingham, who was charged with an offence which amounted to obtaining goods, not intending to pay. The fraud, as Mr. Stimpson, for the prosecution, described it, was performed by the defendant paying a little in some cases, hoping to keep outside the law. When they found that happening time after time, it was a question whether it came within the statute, and whether he obtained credit by fraud, as he never intended to pay.

The first case was that of John Brockbank, of Kirkby Stephen, who advertised a litter of Pomeranian puppies by "Little Conspirator." The prisoner wrote asking for the lowest cash price, and on being told that it would be 32s. 6d., wrote asking that two of the puppies should be sent off. He received them, and sent 20s. on account; but they had never received another farthing. The defendant evidently thought, said Mr. Stimpson, that by that payment he had "made a County Court job of it." William Hayward, a carpenter, of Bath, was the second man concerned, and he advertised four cock Goldfinch Mules, and the prisoner wrote for as many as he could spare, and five cocks, two hens, and one bird that Hayward was doubtful of, were sent off. The prisoner sent 10s. on account, promising to write again shortly. "Never a one of them had sung a note" was the complaint that Tindall, whose card described him as "a breeder of high-class toy dogs, etc., established 1864," next wrote, and added: "I begin to think they are all hens."

The complaint which led to that prosecution was made by John Burge, a grocer's assistant, of Whittington Moor, who sent a number of Canaries, worth 19s., and here again the complaint was that he (Tindall) was afraid they were all hens, and wouldn't sing. The sum of 5s. had been paid, and later he wrote to say that two of the birds had died. If this were an isolated case, said Mr. Stimpson, they would not think much of it; but there were others, and one of those concerned Walter Hughes, of Oswestry, who advertised "two lovely pairs of Bullfinches and a cock Canary." Here Tindall offered 9s., and the birds were sent; but soon after Hughes received a note with a wing of a bird. This was said to be the wing of his Canary, but in fact it was not. "I don't know," said Mr. Stimpson, "whether it is suggested that you could tell a cock from a hen by the wing, or whether it could sing; but it was evidently sent to prove that the bird was dead." Hughes, at all events, received no money.

"Thirty pairs of grand slim Yorkshire Canaries" were advertised by Henry Hardacre, of Greesley, near Leeds. He had heard of slim Boers, said Mr. Stimpson, but not of slim Canaries; but the advertisement added, "feather like wax," and 6s. 9d. a pair was asked. The prisoner's letters induced Hardacre to send 10 pairs, and Tindall, in reply, said they had arrived, but two of them panted badly—"broken winded," said Mr. Stimpson, amid laughter. Two birds were sent back, and Tindall wrote that three more had died.

One after another the fanciers concerned gave evidence, and regularly Dr. Tinsley Lindley (for the defence) asked whether the witnesses grievance was that he had not received the money immediately after the birds arrived? His questions were directed as to whether the excuses put forward by the prisoner were founded on truth.—Hardacre admitted that he had taken a County Court action against Tindall, who had arranged to pay 5s. a month. In one letter he wrote to the prisoner that "he meant to have the money or the man."—"Everyone expects to be paid," said Mr. Lindley once; "but they don't always get it."

Alfred Turton, agent for the house in which the prisoner lived, said the tenant of it was Gertrude Miles, who lived there.—Mr. Stimpson: Are there premises there suitable for a "breeder of high-class toy dogs, etc.?"—Witness: They might be in the upper rooms.—How many rooms in a house at 7s. 4d. a week?—There might be six or seven rooms altogether.

Detective-Sergeant Goddard, of the Nottingham City Police, said the prisoner's real name was Swift, but he traded in the names of Tindall and Miles. He knew that the prisoner had a stall in Nottingham Market.—Inspector Sharpe, of Whittington Moor, said the prisoner, on being charged, said: "It's not a fraud; it's a debt."

Mr. Lindley submitted that there was not a case to go to the jury, and argued that when the credit was given, there had been no fraud. The fraud must exist before the credit.—His Lordship: You must remember that the jury are asked to say that these birds did not die, and that these cocks were not hens—(laughter) and so on.—The foreman of the jury intimated that they had heard enough of the case to make a conclusion, but his Lordship said they must hear it through, and Mr. Lindley argued that where there was bona fide contention such as that of the death of the birds, it was a case for a civil and not a criminal court.

The jury found the prisoner guilty, and Mr. Stimpson said these were only a few of the cases of which they had knowledge.—Supt. Faulkner had had no fewer than 113 complaints, representing a sum of £37 outstanding on birds, etc., purchased.—His Lordship passed sentence of nine months' hard labour.

"LIVERPOOL" VIRUS
is absolutely harmless to human beings and animals, but is speedily fatal to
RATS & MICE.
It causes a fatal disease to spread through a colony of these pests.
They do not die in their holes.
There is, therefore, no danger of smell from dead bodies.
Mice Virus, 1/6 per tube.
Rat Virus, 2/6 and 8/- per tube.
Prepared in Liverpool. Of all Chemists.
EVANS, SONS, LESCHER & WEBB, Ltd., Liverpool and London.

ILLUSTRATED IDEAS

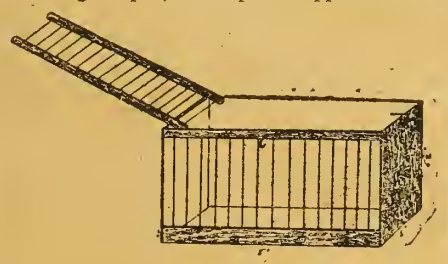
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 115.

A NOVEL NURSERY CAGE.

Sent by J. H. Sharman, 38, Wood Lane, Derby.

I am sending you a sketch of a nursery cage I have used for some time in my bird-room and found most useful. It is made much on the usual lines, with the important exception that the door is placed at the top. There is then no chance of the young accidentally knocking it open, as is apt to happen with the



A Nursery Cage.

usual pattern of nursery cage. They can also be easily got at, for removal or examination. I make my own at a very small cost, with a pennyworth of cage wire and a dry soap box. They are 8 in. long, 5½ high, and 5 wide, the front rail being 1½ in. deep. I hook the nursery cage on the front of the breeding cages, and the door fastens with a wire button which turns in the usual way.—J. H. SHARMAN.

No. 116.

METHOD OF FIXING REVOLVING NEST DOOR.

Sent by W. B. Watson, 17a, Duke Street, Edinburgh.

Cut a piece of wood out of the cage about 1½ in. from top. This can be done with a fine keyhole-saw. But if it proves too small afterwards, another piece can be put in. Next hammer the head off a wire nail, about 1 in. long. Sharpen the head and drive it into the bottom of the hole cut, at the exact centre, leaving about ⅜ in. projecting (a). Then from top of cage drive in another wire nail—also at the centre—till the point appears at the opening (see b). Now take the piece of wood cut out, and having bored a small hole in the centre underneath, press the wood down on the lower nail; then push it into position. The top nail can now be hammered down till the head touches the top of the cage. It will then be found that you have a "swing door," which can be swung round to allow one to examine the eggs, etc. Care should be taken to cut the wood of such a size as to allow of the nest passing through opening. To make it clearer the top of the cage is left off in the illustration.—W. B. WATSON.

THE BRITISH ROLLER C.C.

From the hand-book of the British Roller C.C., just to hand, we notice there is a most gratifying increase in the number of members, and that the club generally is in a prosperous condition. Mr. Norris, the Hon. Sec., whose address is 31, Scylla Road, Peckham Rye, S.E., will be pleased to receive the names of any fanciers interested in Rollers, with a view to their becoming members. He also asks us to draw attention to the fact that there will be no meeting of the club this month. Quite recently the club has revised its standard, and below we give that which will in future be used in the contests governed by the British Roller C.C.

REVIEWS OF SCHEDULES.

Stonehouse (Glos.).—August 1st. Judge, Mr. J. H. Payne. Eight classes:—Nor., 3; Brit., 3; A.O.V., 1; sell., 1. Prizes 6s., 3s., 2s., and a card. Entry fee, 1s. Schedules from Messrs. Rees and Tanner, 1, Burdett Road, Stonehouse, Glos.

Leek First Feather Show.—July 13th. Open to a radius of fifteen miles. Judge, Mr. J. H. Roe. 16 classes:—Nor., 6; Crest, 2; Yorks., 2; Brit., 2; Members' 4. Prizes 5s., 3s., 1s. 6d. Entrance fee 1s. Entries close July 10th to Mr. J. Fowler, 9, Fountain Street, Leek.

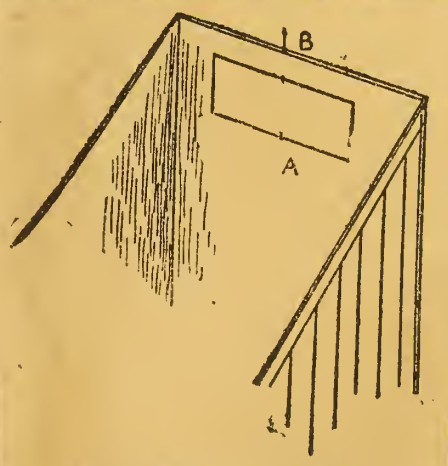
Barrow and Dis. C.B.A. First Feather Show.—July 13th, Greengate Hall; 20 classes. Judge, J. H. Winn. Entries close July 10th to W. Willison, Sec., 17, Cameron Street, Barrow-in-Furness.

Greenwich and Deptford First Feather Show.—July 11th. Judge, J. Robson. 18 classes—Nor., 2; Yorks., 2; Crest, 1; A.O.V., 1; Novice, 4; Mule, 1; Brit., 5; For., 1; Sell., 1. Entries close July 8th to Mr. G. W. Hill, Hon. Sec., Barkworth Road, Bermondsey.

Barnsley First Feather Show.—July 13th. Judge, Mr. J. C. Barnes. Eleven classes—Yorks., 3; Nor., 3.; A.O.V., 1; Mule, 1; Brit., 3. Prizes on sliding scale. Entry fee 6d. Secretary, T. Coward, 22, Blenheim Road, Barnsley.

Criccieth.—July 27th. Judge, Mr. P. Proud. Seven classes. Prizes 8s., 4s., and 2s. Entry fee 1s. 6d. Entries close July 18th, to Mr. T. Burnell, 4, Parcian Terrace, Criccieth.

Waterhouses.—August 3rd. Mr. T. J. Ambrose. Seven classes—Nor., Yorks., A.O.V., Sell., For., 1 each; Brit., 2. Prizes 10s., 5s., 2s. 6d. Entry fee 1s. 6d. Entries close July 27th to Mr. Dunning, 9, Dale Street, Waterhouses, Durham.



Revolving Door to View Nest.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by pre-payment at the rate of three words a penny.

Accrington and Dis. C.B.S.—July 11th, at Headquarters, 8. Balance-sheet for Young Show, etc.—D. Harwood, Sec.

Bolton and Dis. O. and R.C.S.—July 7th. Ramble to Anglezarke; train leaves Bolton at 10 a.m.; members please note; all friends cordially invited.—Jas. Stringer, Sec.

Bingley and Dis. O.S.—July 9th, at Co-op. Rooms, Chapel Lane, 8 o'clock.—A. Livesey, Sec.

Bolton Woods C.B.S.—July 6th, at Victoria Hotel. First Feather Show; judge, Mr. P. Mason; birds to be staged not later than 2.30.—E. Shepherd, Hon. Sec.

Bradford (West) C.B.A.—July 6th, at Red Lion Hotel, Girlington, 2.30 p.m. Members' Show; class for A.O.V. Canary or Mule in their first feather, in addition to classes on schedule; W. H. Shackleton, judge.—T. Clegg, Sec.

Bramley O.S.—July 6th, at Carnival Committee Rooms. First Feather Show; birds to be staged at 2 p.m.; judge, Mr. Alf. Chew.—Jas. Metcalfe, Sec.

Brighouse C.B.S.—July 6th, at Round House Inn. First Feather Show; judge, Mr. W. Munn.—A. Morton, Hon. Sec.

City and Suburban A.C.B.—July 8th, at Church Institute, 60, Paddington Street, W., 8.15 p.m. Cage making demonstration by Mr. A. W. Curtis; presentation of prizes.—V. Wynn, Sec.

City of Wakefield O.S.—July 9th, at Victoria Cafe, 8.—Netherwood and Keeley, Sees.

Coventry O.S.—July 10th, at Sydenham Palace, 8.30.—G. Turrell, Sec.

Crewe O.S.—July 9th, at Headquarters, Nag's Head, 7.30 prompt. Important.—J. C. Heaton, Hon. Sec.

Dewsbury and Dis. C.B.S.—July 6th, at Royal Hotel. First Feather Show; birds staged 3 p.m.—B. Cook, Sec.

Dudley and Dis. C.B.S.—July 10th, at Headquarters, 8.30 prompt. Forthcoming shows.—J. J. Mullett, Sec.

Eccleshill C.B.A.—July 12th, at Fountain Inn, 8. Entries for Young Show; delegate to Yorkshire Union; judges for Members' Old Shows; date of Open Winter Show.—Walter Ashworth, Sec.

Gateshead and Dis. C.B.S.—July 10th, at Lockhart's Cafe, High Street, 7.30. Classification for show, December 13th, 14th, etc.—Thos. Taylor, Sec.

Glasgow and W.C. Norwich, Etc., Club.—July 6th, at 122, Ingram Street, 4 p.m. First Feather Show; judge, Mr. Jas. Laurie; four classes Norwich, five Borders, one Crest or Crestbred, one A.O.V., one Mule or Hybrid; members can exhibit as many birds as they desire; numerous specials.—J. H. Adam, Sec.

Gloucester and Dis. C.B.S.—July 13th, at Ram Hotel, 4.30. First Feather Show; all birds to be staged 5 p.m.; judges, Messrs. J. H. Payne and F. Mansfield.—J. Houghton, Sec.

Greenwich and Deptford C.B.S.—July 11th, at the Two Brewers, Church Street, Greenwich. Young Stock Show; exhibits to be staged before 7 p.m.; friends and fanciers invited; admission free.—G. W. Hill, Hon. Sec.

Guisbro' F.S.—July 6th, at Headquarters, 7. To arrange schedule.—W. T. Simpson, Sec.

Halifax O.S.—July 6th, at Griffin Hotel, 8.—J. F. Thackray, Sec.

Lancashire C.A.—July 13th, at Old Boar's Head, Middleton, 7. Stand and cages, support of open shows, etc.—Jas. Law, Sec.

Leeds C.B.S.—July 6th, at Lockhart's, Briggate, 7.30. Mr. Ramsden on "Norwich Plainhead"; all fanciers cordially invited.—Stephenson and Hornby, Secs.

L.C.B.A.—July 10th, at Napier, 25, High Holborn, W.C., 8.30 p.m. Several questions on the Yorkshire Canary; many blanks will be placed in a hat, and the person drawing a question will be expected to open a discussion on it; fanciers heartily welcome.—T. A. Wade, Hon. Sec.

Manningham C.B.A.—July 6th, at Mowbray Arms Hotel, 7.30. Cricket match re Bradford City; discussion on the constitution of ticks and uneven marks.—E. Kemp, Sec.

Metropolitan Association of Canary, Mule and Hybrid Breeders.—Next meeting, Thursday, July 11th, 8.15, Crown Hotel, Lavender Hill, S.W. Business; Pay prize money, medals, watches, bags, etc., etc., to successful competitors. Election and nominations. Lecture on colour feeding. Fanciers invited, and please note report of Young Bird Show in this issue.—A. J. Head, Sec.—ADVT.

Middlesbrough and Teeside C.B.S.—July 13th, at Crown Hotel, 3 p.m. First Feather Show; all fanciers and friends invited free.—Arthur Wake, Sec.

Middleton O.S.—July 8th, 8 p.m. Young Bird Show, etc.—R. Cowherd, Sec.

Morley C.B.S.—July 6th, at Band Room, 7.30. Coming show and other important business.—W. H. Groundwell, Sec.

Morpeth and Dis. O.S.—July 13th at King's Head Inn, 7.30 p.m.—A. Dippie, Sec.

Pelton and Dis. C.B.S.—July 6th, at Fleece Inn, 7 p.m. Important business; members are requested to attend.—L. Hall, Sec.

Pendleton and Salford O.S.—July 8th, at Derby Arms, Oldfield Road, 8. Half-yearly report and First Feather cards and specials.—W. Jackson, Hon. Sec.

S.W. London C.B.S.—July 11th, at Plough Hotel, 8.30. Pay out prize money and to discuss a Federation of London Societies.—W. Lilley, Sec.

Sutton-in-Ashfield and Dis. O.S.—The First Feather Show on July 6th will be postponed.—J. Smith, Sec.

Swansea and Dis. C.B.A.—July 11th, at Market Coffee Tavern, 7.30. Arrangements for First Feather Show.—Alf. Hitchings, Sec.

Wath and Dis. C.B.A.—July 7th, at Cross Keys Hotel, 7.30. Show business.—H. H. Bramham, Sec.

West London F.A.—July 13th, at Bush Hotel. Young Bird Show; J. Robson, Esq., judge.—J. Dewhurst, Hon. Sec.

Wigan and Dis. C.B.S.—July 8th, at Adelphi Inn, 8.—W. Ridge, Sec.

Wolverhampton and Dis. C.B.A.—July 9th, at Vine Hotel, 8. Arrangements Nest Feather Show.—F. Howes, Sec.

York C.B.S.—July 8th, at All Saints' Schoolroom, North Street, 7. First Feather Show; also other important business.—T. Boyle, Sec.

Norwich Plainhead Club.

Committee meeting at Manchester First Feather Show, Coal Exchange, Manchester, at 4.30 on Saturday next, July 6th, to confirm or amend the scale of points published in CAGE BIRDS, and to decide on a full-sized model. All drawings, suggestions, and scales of points to reach me not later than Saturday.—A. RAYNES, Hon. Sec.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

What Ails Him?

J.P.A. Llansamlet.—(1) Your young bird has evidently caught a cold. Give in the drinking water fresh daily for a fortnight ten drops of syrup of tolu, ten drops of ipecacuhana wine and six of paregoric. Keep him out of any draughts, and cover him over at night with a warm cloth. (2) Syrup of tolu is good for bronchial troubles. (3) You may try the Linnet and Canary ben again, when you may probably succeed in getting fertile eggs. He may not have been in breeding condition when the hen went to nest last.

Tailing and Flighting.

Chesham, Mid Bucks.—No, you will not have to flight and tail your young birds. Flighting is a practice, I am pleased to say, that has practically died out. You will find plenty of shows where classes are provided for unflighted birds. (2) Yes, you can exhibit at any open show, even if you are not a member of a society. (3) I am not able to tell you if there is a society near you that you could join. Write a short letter to CAGE BIRDS, asking the Secretary of the Cage Bird Society in the nearest town to you to communicate with you, and I have no doubt you will soon get a reply.

Surfeit and a Sweating Hen.

Novice.—Your ben is evidently suffering from surfeit, and your treatment is quite correct. I have no doubt by this time that she is much better. You may give her in the drinking water for a few days about ten drops of the juice of a fresh lemon. (2) I should advise you not to attempt to breed again this year with the ben that has sweated her young, as the season is getting well on towards the finish. She would probably do the same again, and perhaps then would have a slow dragging moult, whereas if you put her aside now she will be gathering strength for the moult, and next year probably do you good service. I have tried all manner of remedies to cure sweating hens, but I must say I know of no absolute cure.

A Seven-year-old Bird.

H. Green.—Give your bird in his drinking water fresh daily ten drops of syrup of tolu, ten drops of paregoric and six drops of whisky. You may let him have this for three weeks, and then dissolve a little best boney in a drop of warm water and let him have this to drink for a week or two. You may let him have the egg food as usual, to which you might add six drops of Parrish's Chemical Food. Keep him in a warm corner away from all draughts, banging below the level of the gas, and cover over at night with a warm cloth.

When Moulting.

Markham.—No, it is not advisable to give young birds that are just moulting a lot of linseed, either in the whole state or in a meal, as it will only make them too relaxed. Your best plan is to give them a little best English linseed when they are nearly through moult, say every other day. (2) You may give the iron right through the moult. (3) Gentian and saffron would not tend to neutralise the colouring properties of the red feed. (4) I should not give dandelion and shepherd's purse during the time they are moulting. Let them have nothing but best Spanish canary until they are nearing the finish, when you may give them the linseed. If you give them too many different kinds of seeds they will eat these and will not partake so much of the colour food as they would do if kept only on the plain canary.

YORKSHIRES.

Answered by H. W. BATTYE.

Swollen Feet.

Perplexed.—Wash the swollen part with warm water in which you have dissolved a few crystals of permanganate of potash; wipe dry, and then open the blister with a sharp instrument, a clean needle will do, squeeze out any fluid that may be in, and then anoint with a little zinc ointment every day for a week. I am of opinion there has been something about your cages that has set up the irritation of the parts affected in the first instance; perhaps the sand is not from a good source. Do you keep the perches clean? Attend to this, and try a fresh kind of sand. I hope this second bird will get round all right.

No Canary Seed.

Victorian.—I am not surprised at your pair of Yorkshires that are rearing a nest of three young ones nearly a fortnight old not seeming satisfied when you are keeping them without white canary seed, as this is undoubtedly, as bread is with ourselves, the staff of life to Canaries, and should be kept in the seed hopper over and above any other kind of food that is being supplied, whether feeding young ones or not. Your feeding in other respects seems all right, and no doubt you have seen same recommended frequently in CAGE BIRDS, but this other feeding is generally understood in addition to the white canary seed, which should be a standing dish for Canaries in 99 cases out of 100. Pleased to know you have found CAGE BIRDS of so much benefit in your breeding operations.

Is it Red Mite?

M. B. Dublin.—From what you write I am inclined to think your bird, and very probably his cage, too, are infested with the red mite. Catch your bird during the day time, and give him a good dusting with Keating's Insect Powder, getting well under the wing and among the loose feathers about the vent; wrap him up, except the head, in a thin cotton cloth for five minutes, and then put him in a clean cage, a new one for preference. I think you will find an improvement in the course of a week or two, though be may not get quite right about the wing butts till he again moults; the feather about his thighs that covers his legs is very probably there owing to the breeding of him.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Moulting Crests.

Clear Body.—To successfully moult a Crest, in the first place the bird must be strong and healthy, and when it starts moulting must continue throughout from start to finish without a check, commencing down each side of the breast and finishing with the crest. After the young birds are taken from their parents I prefer to put them in a flight cage, which, I consider, strengthens them. When commencing to moult, cage the best birds off separately, and cover the cage front over at night to keep the bird warm and free from draught. Warmth is the great essential when moulting, and this is also assisted by a moist atmosphere. Outdoor changes in the temperature are fatal when moulting Crests. If the feathers of the crest stick in the quills, and fail to come out as quickly as they ought, slightly damp the crest with warm water, using a small soft piece of sponge for the purpose. Give a small quantity of egg food twice a week, to which add a few drops of Parrish's Chemical Food, or add just a pinch of sulphate of iron to the drinking water twice a week. But if a bird is strong and healthy, I myself give nothing beyond good sound seed, a few groats occasionally, and egg food twice a week.

BORDERS.

Answered by J. PATTERSON.

Hen Gone Wrong.

Anxious.—I think the principal cause of your ben's illness is the damp room. There can be nothing worse, especially in such weather as we have had lately. Try and air it every morning as much as possible without letting any draught enter directly on to your birds. Also put down a shallow basin of water containing a few grains permanganate of potash, which change is often as you find discoloured. This will take away the damp smell. (2) Has the cock bird not pulled out the feathers? Some of them are very mischievous while the hen is sitting. If so, nothing can be done. They will come again after the moult, which will soon be here now. I think he will also be responsible for damaging the eye. Catch her and bathe round the eye with half milk and water mixed together daily; rub it with a little golden ointment got from your chemist. (3) Feed on best Spanish canary seed. Add every alternate day a third German summer rape. On the other days half a teaspoonful egg food, with a pinch of maw seed added. One hard-boiled egg to three Osborne biscuits. Stop the hemp seed until the parents have young to feed, and you will find them get on better.

Moulting.

J. Kay.—I am pleased to see you have done so well with your breeding. Cage the best looking young into single cages. Let the others remain in the flight. It should hold comfortably from 20 to 25 birds, but I do not care for flight at all unless to run the birds into once a week or so for a flight. You cannot regulate their diet so well, and some you will find will fight and swallow all tit-bits given, while the others have to starve. (2) Your feeding is quite correct, but you must add a little maw seed to the egg food, and put a pinch of linseed amongst their seeds when they are moulting. (3) Pull any of their tails that are shattered or frayed, or any of those with tails not corresponding to the length of their body. The same applies to frayed wings. Cover them over whenever you see them break away in the moult. Get a piece of thin cotton to cover say six cages, roll it up in your hands and put to back of cages, bring forward on to tops, let remain for one day, next day bring it further forward and pin in position until it is down at the front entirely. They fall gradually into their new surroundings when you do it by easy stages. Also keep the fierce rays of sun from striking direct on them, and they will come out better in colour.

ROLLERS.

Answered by "SCHOOLMASTER."

Yolk and White in Egg Food.

E.W.—Whether the yolk and the white should both be given to newly-hatched Canaries is a point on which most fanciers hold contrary opinions. Many give the white and have never, so far as they can see, had any ill-effects for so doing. Others, however, stick to the yolk only for at least the first three days (often longer), and they believe they meet with a greater measure of success through doing so. Personally, I prefer the yolk only; in any case, I never mix the whole of the white with the yolk when the birds are the age just mentioned. The white has not the same feeding properties as the yolk, which, in fact, is the food provided by nature for the first few hours of a young bird's life. It is known, too, that the white is not so easily digested—by man, at any rate. I think it safe to be guided from nature as far as we can. At the same time, I believe in a fancier following the lines that have brought him success in the past. I like "Gofio" to mix with the egg. It is a bread-like preparation, made without yeast or baking powder, and is much used by German breeders. It does not go sour, and is digestible and nourishing. Most of the large specialists advertising in CAGE BIRDS can supply it to you. To two tablespoonfuls mix the yolk and half the white of an egg (hard-boiled, of course), and a very small teaspoonful of small, moist sugar. If your hen caught a chill, which seems probable, that would be why she left off feeding and starved the young. I prefer freshly made egg food for feeding with; green food and seeds in addition, of course.

Weak on Legs.

H. Cole.—It sounds funny to hear of your cock bird being weak on his legs, and yet on full song. I shouldn't have thought he'd have sung if as bad as that. I should get a few pennyworth of a good stimulating liniment from a chemist, which is non-poisonous, and rub the legs gently twice daily with it. He will know what to give you if you explain what you want it for (or you could use Zam-Buk). Before you apply it, soak the legs for a few minutes in hot whisky and water. Give the bird a teaspoonful of egg bread (or a patent Canary bread of a good maker) with which you well mix 6 spots of syrup of hypophosphites (or Parrish's Chemical Food). This should be given every day, also a little maw seed. Keep him quiet and undisturbed until he recovers. If you can't manage egg bread, some very stale sponge cake, home-made if possible, with plenty of eggs, would be a good substitute.

Strange Behaviour.

Anticipation.—Your bird's strange behaviour is due to him being in high breeding condition, and wanting a mate. This causes him to "get quite excited at times, and rush about the cage flapping his wings." If you found him a wife I feel convinced this would prove to be the case. A bird in good condition and not wanted for breeding ought not to have the Eggertine every day, as this would only stimulate him. I should only give it him twice a week, and confine his seed diet to plain canary with one feed of mixed seed a week. Also let him have a fair amount of green food every day, and a little sweet apple now and again. If you can get him seeding chickweed and shepherd's purse, you can give these more freely than lettuce and watercress. There is nothing to worry about over its condition, but it is as well not to keep a bird too highly strung up in condition. The soft food can be given with benefit every day during the moult.

Wings Hanging Down Side.

Rollers.—It is a natural action with your bird to let the wings droop at his side, and you cannot do anything to alter it. You will do wrong to try, seeing that he is in such good health and song, for you might upset him by so doing. Probably it is his very good condition which makes them droop, for many cock birds when in high condition let their wings hang down stiff, as it were, by their flanks, and draw themselves up very tightly. After the moult, when he is not feeling quite so lively, no doubt he will carry the wings up on his back again. You are feeding him a little over generously. Rollers don't want hemp and maw seeds in the stock mixture. The latter should be: Canary, one pint, summer rape, half-a-pint, mixed. A little maw and hemp can be given in a separate vessel twice a week. Let the bird have a little green food (see other replies) every day, or a piece of ripe, sweet apple.

Sore on Middle Claw.

R.C.I.—If the claw has turned black and looks as though it is decaying (as you say) then you cannot do anything to mend matters. You ought to have tried some treatment when the sore first put in an appearance. The hen will, no doubt, lose this middle claw, but this will not affect her perching, nor is the trouble likely to extend to the other claws. You could wash the foot for a few minutes in a teacupful of fairly hot water in which has been dissolved as much boric acid as will just lie on a shilling. Afterwards gently rub into the claw a little carbolised ointment. You can get these two things from any chemist for a few pence. But if "rot" has sent in they cannot make the claw well again, though they would tend to cut the trouble short.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Size of Flight.

Is a flight, 4 ft. by 16 in. high, 9 in. wide, large enough for ten Canaries to moult in.—A.G.P.

A.G.P.—The flight you mention is not large enough for ten young birds to moult properly. It is all right for length, but is too low and too narrow. It should be 24 in. high, 18 in. wide to enable ten birds to moult in comfort. In the confined space you mention, you would be likely to have great and constant trouble by the birds plucking each other.

Samples of Grit.

A.M.W.—The three samples of grit are very good indeed, and, as you say, are a good natural grit. In addition to the ordinary grit properties, the iron should act as a valuable tonic.

Birds Dying.

Constant Reader.—It is quite impossible to say for certain why your young birds died. Your feeding is all right, and I can only put it down to the fearful weather we have experienced this summer. Breeders all over the country are experiencing the same kind of thing as yourself.

Hen not Sitting.

H.G.—Many hens will not sit until they have laid their full clutch. Don't worry. Your hen has served you well in the past; give her another chance. I expect by this time she is quiet and sedate enough, and the eggs will be all right. The second hen evidently is of little use, and I strongly advise you not to attempt breeding with her again.

Soft Food Recipes.

(1) Can you give me a good recipe for making a soft food that will keep after it is made some time, and mix with colour food? How is German paste made?—THELMA.

Thelma.—There are several very good soft foods, or egg substitutes, advertised in our columns, either of which will mix well with colour food. If, however, you prefer to make your own, you might try the following:—Take half a pound of arrowroot biscuits, divide into three equal quantities, and crush with a rolling pin. To each of these quantities use one egg. Boil the egg for fifteen minutes, then take it out of the water, strip the shell, and, whilst hot, roll egg and biscuit between the hands. The egg rubs into the biscuit, and it becomes like oatmeal. Egg food so prepared will keep for five or six days and not turn sour. It is because the egg rolls into the biscuit whilst hot, which it will not do when cold, as the white remains in lumps. If this does not suit, you might try making a cake of the following ingredients:—Eight eggs, ½ lb. pure lard, 1½ lbs. castor sugar, 1½ ozs. baking powder, 1½ ozs. salt, 3½ lbs. flour. Allow the loaves to stand about a week, and then rub them up as fine as possible. I also give you a recipe for the making of German paste. It is made as follows:—2 lbs. peameal, 1 lb. sweet almonds (blanched), ½ lb. fresh butter or lard, 5 ozs. moist sugar, ½ drachm hay saffron. Beat to a smooth paste with a sufficient quantity of cold water, granulate the mass by passing it through collander, and expose the product to the air in a warm place until quite dry and hard. The addition of two or three eggs improves it.

Two Hens Unfit.

Dean Bank.—In purchasing the birds you should have insisted upon their coming on approval. However, you did not, and must put up with the consequences. But what could you expect at 3/- each? One, I am afraid, is ruptured, and will never be any good. The other you should try giving 10 drops each of whisky and glycerine in the drinking water each morning. Don't attempt to breed with them.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Mealworm Boxes Going Damp.

South Wales.—Have never had any mealworm boxes "go damp," so cannot say as to the cause of your trouble. Do you ventilate them properly with at least a row or two of holes bored round the top, at the sides and in the lid? Also do you keep them in a dry, warm spot? If so, then I don't see how they could "go damp," unless you turn in very damp bran, etc. I certainly believe in changing the contents of the tins every so often (every few years, the exact time depending on how heavily stocked the boxes may be). The top layers can be removed wholesale to fresh tins (or boxes), but the contents towards the bottom should be well sieved before being transferred. All the small, dust-like matter is waste. If I put in dog biscuit I always crush it as finely as possible beforehand.

Indoor Aviary Wanted.

Gwendolyn.—The nicest-looking aviaries for drawing or living rooms are those which have come to be known as Crystal Palace aviaries, but, as with men (it hurts me to say it) the nicest-looking are not always the best. Quite the best, if you can find a wall to fix it on, or a well-lighted recess in which it can stand, is a kind of large flight cage—that is, wired at front only. If enamelled inside very light green or blue, and black outside, and fitted with smart glass or pot drinkers, etc., such a cage looks very smart indeed, and suits birds admirably. All open-wire aviaries are so apt to be draughty, and unless birds are very steady, they are nervous therein and won't stand to be looked at, much more admired. You could get a fairly large flight of the type I advocate for 10s. 6d. I am afraid you could not expect to breed therein with birds of different species all mixed together. One or two pairs of Canaries might breed in it, or two muling couples. When kept in a confined space such as this would be birds when breeding prefer a little "home" all to themselves.

More Cuckoos.

South Walian.—In another reply this week you will find some remarks on exhibiting the Cuckoo. They are eligible to be shown; it rests with the discretion of the judge whether a prize is awarded them. They are not on the N.B.B. and M.C. list. I doubt whether you will get it to stand much showing. They are very apt to break and soil their plumage when caged. As you are used to feeding both large and small Softbills, its diet will not trouble you. It is many years since I kept one, and I don't want another—as a "pet," anyway. Mine thrived on Thrush food, prepared in the usual way, with vegetable or fruit or green stuff added, and liked all kinds of live food, including mealworms and garden worms when small. It is an offensive bird so far as excreta and habits are concerned, and does not live long, as a rule, in a cage.

Canary's Strange Task.

W.E.C.—I should say the nest and eggs found are those of the Lesser Whitethroat. Your description answers perfectly for that species. This being so it was only waste of time (and good young birds) taking the eggs home and putting them under a Canary, for she is not likely to rear young Warblers. If she hatches them out, however, don't give her seed to feed with (only a little canary seed for herself), and well mix some best quality ant's eggs with the egg food; also some mashed-up mealworms. Now you have gone so far in the matter you might as well try to carry it through.

Disappearing Eggs.

H.G.S.—Thirty birds are not too many in an outdoor aviary with 70 feet of floor space; yet they are plenty where successful breeding results are desired. I think you go a little too far in suspecting the Siberian Goldfinch of being responsible for the disappearance of all your eggs. Where a mixed lot of birds is kept troubles of this and like nature (such as nest "ragging") are practically inevitable—he is lucky who escapes them. Have you never noticed any of the other birds interfering with the nests? And are you sure mice, etc., are not the cause of the trouble? You could remove the Goldfinch for a time, of course, and this would soon settle the point as to his culpability or otherwise.

Sparrow-Canary Mules, Swallows and an Aviary.

(1) Are Sparrow-Canary Mules pretty and of any value. (2) My aviary is a great success. I put a pair of Dippers in it, and they are doing well. I have 15 pairs of birds in it, Goldfinches, Bullfinches, Linnets, Corn, Snow, Ortolan, and Yellow Buntings, Quails, Sparrows, Chaffinches, Yellow Grey and Pied Wagtails, Long-tailed and Bearded Tits. The Wagtails, Goldfinches, and Linnets bred, and I sold the young. Have I too many? (3) What is the best food for Sparrows? They nearly always die with me. (4) Am thinking of introducing a pair of Swallows into my aviary. What food is best to hand-rear them on? I hand reared a couple last spring, but they died in the moult. —MISS D. K. F.

Miss D. K. F.—(1) As I have never either seen Sparrow-Canary Mules or heard of them being bred, I cannot speak as to their looks, good or otherwise. If the markings of the adult cock Sparrow appeared in the Hybrid, the latter would undoubtedly be pretty. It would certainly be valuable. (2) I congratulate you on the huge success of your aviary. Fancy being able to sell "home-

grown" Wagtails and Goldfinches. I hope you will let me know if your Dippers continue to do well, also your methods of feeding, for the keeping of this species has proved a sore stumbling block to many of my friends. Regret I can't express any opinion as to the over-crowding or otherwise, as you don't tell me how big the aviary is. It would hardly answer so well, however, if there were anything radically wrong in this respect. (3) Sparrows ought to find all they want in your aviary, and I'm sure I could not suggest anything you do not already place therein for the food of the other birds. Philip, however, does not make a good aviary bird; he is wild and a "worrit." (4) Why not use the same food as was tried with success last year? The best things possible would be flies and small smooth caterpillars and grubs, if obtainable with sufficient ease. If you mix best quality ants' eggs (freed from all rubbish) with equal parts of crushed maizena wafers and hard-boiled yolk of egg (beaten up fine), you have a food which will accomplish the band rearing. At the time of feeding chop and mash up some mealworms and add to the portion required, afterwards moistening it to a sloppy consistency (like cream) with new milk. The food must be always quite sweet and fresh, and now and again a pinch of powdered cuttlefish bone should be stirred amongst it. All the small flies and grubs you can get must also be given, of course. The moult is always a ticklish time for captive Swallows, and it is no great matter for surprise that you lost yours at that period.

in an Aviary.

S. Shore.—You don't say how big your aviary is; I presume, however, you know better than to overcrowd it. Song Thrushes, Sky and Wood Larks, Blackbird, Redwing, Stonechat, Wren, Grey Wagtail and Meadow Pipit are "Softbills" which you could quite likely keep in such a well-sheltered and covered outdoor aviary all the year round. It is not at all unlikely, too, that a Redstart, Wheatear, Yellow Wagtail, Blackcap and Nightingale might winter out in it, though the two latter species are doubtful, the 'Gale especially so. I should not keep more than one Blackbird or Skylark. Don't include a Robin on any account. A good soft-food mixture would suit all the insectivorous species. Here is a recipe: Melox and plain sweet biscuit both finely crushed, three parts each; ants' eggs, three parts; dried flies, meat meal (or the finest crissel) and silkworm pupæ, two parts each. Prepare in the usual way with vegetable ingredients, and add egg flake or hard-boiled egg now and again, clean grocers' currants, etc., while fruit and live food must be liberally supplied. The difficulty with the latter is to ensure the more delicate species (which, of course, require the larger share) getting an adequate supply. The bigger, bolder birds gobble it all up and leave them repining. Read up back replies on feeding insectivorous birds.

Shepherd's Purse, etc.

Duffryn.—Had posted a sample of shepherd's purse to you before your letter arrived. The latter contained a specimen of the real Simon Pure. I thought you would find it in plenty once you knew what to look for. Glad to know you have hatched out the Mules. I trust you may rear them; also successfully rear the new cage bird society. Book of rules posted at same time as the shepherd's purse.

Will they be Fertile?

Norwich hen laid three eggs before she went in with the cock Linnet. After she had been mated three days she laid two eggs. She has now been sitting seven days. I do not think the cock has been very intimate with her, and he does not attempt to feed her while she sets. Do you think the eggs will prove fertile?—NOVICE IN DOUBT.

Novice in Doubt.—I cannot possibly venture to say whether the eggs will or will not be fertile; the furthest I can venture to go is to say that they can be fertile. An interval of three days between the introduction of the male and the laying of the eggs is quite sufficient to allow of them being fertilised. The fact of the clutch being an irregular one, however (two eggs only), is certainly against the probability of any young putting in an appearance. Your remark about the cock Linnet not being very intimate with the hen made me smile, for it never occurred to me there might be degrees of intimacy 'twixt birds. Probably he declines to feed her now she is sitting as a sign of his displeasure at her haste in cutting short his attempts at closer intimacy. Anyway, you can easily test the eggs and see whether fertile or otherwise. When you catch the hen off the nest, lift the latter out of the cage for a moment, and hold the eggs 'twixt forefinger and thumb up to a strong light (say to the window). If you can see through them they are unfertile (i.e., clear), but if opaque, then they contain chicks. Should they prove clear, as seems likely, don't put the nest back, but give the hen two days rest by herself. Then reintroduce the cock Linnet, and try your luck with a last nest.

A Varied Trio.

Pryderns.—(1) If your hen Canary has not built nor shown any signs of building, it cannot well be the Greenfinch's fault. I should think she has never been in proper breeding condition yet. I have heard of one or two others acting similarly, their owners laying the blame on to the wretched sample of weather experienced this year. You are sure, I suppose, she is not an old, worn-out or barren hen? (2) Yours is not the first hen which has persisted, in spite of all one could do, in laying her eggs on the cage floor. Personally, I wouldn't bother with such a lunatic, unless specially valuable, for such are more trouble than they are worth. Replace her with a more sensible hen. (3) The bird you describe is a very common species, viz., the Lesser Redpoll. As it has red on the breast it is a cock; hens never show this. The Redpoll is familiarly known as "Jo-ey," this word resembling its call note (which you describe as "tow-he" or "you-ee").

Some Old Faces Again.

Have had a nest of five Thrushes given me. They have started to peck, and I am feeding on one part Melox, one part crissel, one part ants' eggs, one part dried flies. Am I correct? (2) At what age shall I be able to sex them? Also state the time of moult and if you advise colour feeding. (3) I have two singing Larks. Will song of Thrush affect their song, or vice versa? (4) What size of cage is suitable for male Thrush.—JOSH-O'-BRUM.

Josh-o'-Brum.—Three out of your four questions I have answered repeatedly just lately, oh Joshua!—or is it Joseph? (1) My mixture for a Thrush stock food is melox (or game meal) three parts to one part each of ants' eggs, dried flies meat meal and dried silkworm pupæ. You are very nearly correct, you see. For full details, see issue of June 15th date. (2) The only sure method of sexing Song Thrushes is by hearing them sing—cocks and hens are precisely the same in plumage, though the former are possibly a slightly richer tone of brown on the back. See also June 15th issue for fuller details. They moult at the same time as other birds—broadly speaking, any time from the middle of July to the end of August. I think colour feeding undoubtedly improves the ground colour of a Song Thrush; therefore, as depth and richness of colour is a great point in an exhibition bird, you will do well to let yours have some sweet pepper. (3) This question is also answered in issue of June 15th. Your young Thrushes are certain to pick up many of the notes of the Skylarks, especially if they only hear the latter while learning their song. They should be tutored under a good singing Thrush (or even Blackbird). Adult British birds are not prone to pick up strange notes. (4) A box pattern cage, 2 ft. 6 in. to 3 ft. long by 20 to 24 in. high by 12 to 16 in. wide would answer admirably for a Thrush, either male or female—the larger the better. Any good cage maker would fix you up with the right article.

Sedge Warbler or Reed Bunting?

Is this the Sedge Warbler? He sings during the night, imitates other birds, and will start with the Greenfinch note and then chirp like the Sparrow. His local name is the "Chirmuffet." My wife is rearing a nest of them for the coming shows. Will they stand a good chance if put down to perfection?—WILLOW REN.

Willow Ren.—Your query is a little bit of a puzzle. The local name is no guide to me, as I never heard it before personally, and cannot find it recorded anywhere. The particulars you give might apply to any of three species—viz., the Reed and Sedge Warblers and the Reed Bunting. The latter, however, you could quickly tell by its short, thick bill; the Warblers, of course, having a long, slim, fragile-looking beak. The Reed Bunting has lots of Sparrow-like notes—seems to imitate many birds, in fact—but is not a great night songster. It builds on or near the ground, close to water, often amongst rushes or coarse grasses or at the foot of a bush. Both the Sedge and Reed Warblers are great disturbers of the peace at night, and have a very "creaky" kind of song, which can well be held to contain Greenfinch and Sparrow-like notes. The Reed Warbler is a plain brown bird above, running to whitish on the throat and underparts. The Sedge Warbler is greyish-brown above, and similar to the Reed underneath—it has, however, a broad, well-defined, yellowish-white eye-streak, which serves at once to distinguish the two species, also a more-or-less striped appearance above, owing to the dusky centres to the feathers. The Reed Warbler usually weaves its nest round the stems of reeds; the Sedge Warbler does not. Either of the Warblers, if staged in good form, would be almost sure prize-winners on the show bench. The Reed Bunting is not, of course, so valuable an exhibit.

Rape Seed: Feeding Young Birds.

J. Wise.—I do not care at all for the sample of rape seed you send—that is, as a seed to give to young birds. It would probably be all right to give British birds in an aviary. But for young Canaries or young Mules I should not give any kind other than genuine summer (German) rape. The sample you send tastes hot and bitter when chewed in the mouth, consequently is clearly not this rape at all. The proper German rape has a very pleasant, sweet, nutty flavour when chewed, and can certainly be given to any young birds when feeding themselves. If you cannot get it in the town where you reside, send to one of our advertisers for a supply. The young birds should have canary and maw seeds when first weaned, with soaked summer rape seed in addition, and a little lightly-cracked hemp daily. Afterwards, about a week later, add a little rape (unsoaked) to the canary seed, and give the hemp uncracked; also give a good feed of cracked sunflower seed every day. Remember, all cracked seed must be freshly prepared each day. As regards green food, if giving lettuce or watercress, use it but sparingly, but if you can gather the seeding heads of chickweed and shepherd's purse (you certainly ought to) they should be freely given. Egg food is best dropped entirely when the young are feeding themselves, substituting milk sop for it. A little home-made egg cake (baked), with a spot or two of milk over it, is excellent, however. Read reply to "Cuisine" last week. Management on common-sense lines should carry you through all right.

A Catchy Matter.

Avic.—I should certainly advertise the horned Owls (are they the Short-eared or Long-eared, by-the bye?) if you want to dispose of them. I don't for one moment think you would experience any trouble of the kind you indicate. Nightingales will be caught towards the end of July and beginning of August. I do not agree with anyone catching them during the breeding season, while breeding operations are actually in progress, and whoever does so deserves to get caught himself, and punished. Pleased to know you yourself hold the same view. There is opportunity in plenty to catch 'Gales, etc., on the spring migration, and just before they leave us on their autumnal journey. The former period is the more popular, of course, as Nightingales are then very easily located. In the late summer it is not at all easy to say exactly where one is likely to light upon them. They are birds which expose themselves very little.

Light Linnet Mule, etc.

T. D. Coley.—Have posted you a sample of shepherd's purse. Very glad to hear of your great success. A light Linnet Mule has always a value higher than a dark. Yet everything depends on the bird itself. If it is a hen, for instance, its value drops very considerably. If you sent me a rough sketch of the bird, a little later on, showing the dark and the light parts of its plumage, I could advise you better. Coming from a Roller hen, however, it is almost certain to be on the small side, and this is a point telling against it. Of course, I am thinking of keen competition. At the smaller shows a cock Linnet Mule with a decent proportion of light plumage on him is almost certain of recognition in the prize list.

Inflammation and Other Things.

W.J.S.—Inflammation of the stomach is a difficult matter to treat, and once well established the death of the bird affected is practically a certainty. The trouble lies in the fact that most fanciers leave the question of treatment until the bird is already three-parts dead. If taken in time, then I have never found anything beat the application of a little turpentine to the stomach. This is a dangerous remedy, however, unless used with caution. Only just a smear should be applied, either with a tiny camel hair pencil brush, or the tip of a bird's tail feather. If too much is put on the bird obviously suffers. Water should be withheld for a time, to get the bird thirsty (this doesn't take much doing when inflammation is present). Mix into two tablespoonfuls as much prepared chalk (from a chemist) as can be picked up on a shilling; use a glass or pot vessel, and give the mixture in a well stirred-up state. Let the bird have five or six good drinks at this, then change to plain water. Keep it quiet and cosy, and give a change of food—on to milk sop, or soaked ants' eggs, if possible. If no improvement next day, repeat the painting with turpentine, but instead of chalk give Dover's Powder (also from a chemist). The latter, however, is best given amongst food, and if the bird is eating milk sop, mix as much as will just cover a threepenny piece amongst a teaspoonful of this. Sweeten the milk sop. In a case of inflammation the bird should not be allowed to consume an inordinate quantity of water, which only aggravates the trouble. I must give the "bareness" of the Chaffinch up as a puzzle; possibly it is due to some constitutional cause. The best mating for the Bramblefinch-Chaffinch cross is cock Bramble to hen Chaffinch. The cage would have to be a very large one; a small aviary is best. A good insectivorous mixture is best for a Cuckoo. This species is not on the list of the National British Bird Club, but might be awarded a prize at a show. It is a difficult bird to get on to the show bench, however, and stands travelling and the cold very badly. I question if it will live.

Skylark Laying an Egg.

Novice.—Sorry you are disappointed with the indisputable token of sex your Skylark has presented to you. It is quite true that hens of almost any species of British cage bird will sing when kept by themselves in confinement—though, as a rule, "but poorly for a cock," as you say your own did. I have known hen Linnets and Goldfinches, however, sing in the spring as well as some cocks, and when, too, being kept in a flight along with cock birds. I don't think you would succeed in breeding Skylarks in a cage; it would have to be a very large one, anyway. They have been bred in an aviary. In fact, an interesting account of such an occurrence was published in CAGE BIRDS some six months or so ago, and no doubt you can get a copy of the issue by sending the necessary stamps to our manager, if you feel you would like to read of it. As to leaving the cage door open, and letting her wing her way to the fields, that must rest with yourself. It will be an excellent thing to do if you have no use for her. Give her a good feed some fine morning (including a few mealworms), then let her away.

Assorted.

Mug at the Game.—I am certainly not surprised to hear of it raining at Manchester—you'd feel hurt if it didn't, I fancy. "Six p.m.: thunder, rain, and hail—and midsummer (only a dream)." Well, that about sums it up down here. Pleased to know my previous answer has turned out "correct to the letter." You will have time to try again yet, providing your hen Canary does not drop into moult. Good luck, say I. Fleetwood sand is good sand, you say, not dusty but rather coarse, and with plenty of shell in it; Liverpool sand is very dirty; Southport sand clean and golden, but very fine and very dusty. I don't know anything about it personally, but some reader or other may profit by the information. This is not the time of the year to buy Linnets by the dozen—not if they are newly-caught birds, anyway, and at the price you quote they must be that. If you can pick up one or two good young Linnets in a week or two's time they might (if good in show points) turn out well for the shows next season. If you are buying adults, I advise you to wait until the end of September or middle of October; but please yourself in the matter, of course.

Mainly About Greenfinches.

(1) Are Greenfinches hard to tame? (2) What is their food in confinement? (3) What birds may they be paired with for breeding? (4) How many birds may be kept in a cage 36 ins. by 13 ins. by 12 ins., and what kinds?—BERTIE.

Bertie.—(1) Greenfinches vary in disposition, of course—like all other species—but taking them on the whole, I should certainly not call them difficult to tame. If you get a young bird, or an adult caught during the autumn, you should not experience any trouble to steady it. Adults caught on the verge (or during) the breeding season are the troublesome customers—often impossible to reconcile to caged existence. If you get a "mad" bird, let it go, and try another. (2) The principal food is sound white sunflower seed. This is best given in a separate dish. The stock mixture can consist of canary and teazle seeds, one pint each, summer rape and charlock a half-pint each, hemp and linseed a quarter-pint each. Try with any of the usual green foods and seeding (wild) weeds. (3) If you want to experiment, you can try the Greenie with many species. But if you want something that has already been bred, then you can put up the male with either Canary, Bullfinch, Linnet, Siskin, or Goldfinch hens, and the female with either Goldfinch, Linnet, Redpoll, Siskin, Twite or Canary cocks. The hen often makes a very good breeder in captivity—either in an aviary or a large cage. (4) This cage is just a nice size for one Hybrid couple. If you keep cock birds only, it will hold four or five small Finches—say Goldfinch, Linnet, Bullfinch, Redpoll, and Siskin. Four, however, are really ample.

Sex of Young Skylarks.

Could you inform me how to distinguish the sex of young Larks? Have not seen this question answered, but only on adult birds. Is it any guide as they sit in the nest as regards the top birds being cocks?—C. HASLAM.

C. Haslam.—It is an old "tip" that the top bird in a nest is bound to turn out a cock. But long ago, in my schoolboy days, I found it most decidedly not the "dead certainty" I was given to understand it to be. I had both hen Thrushes and Blackbirds when being guided by the method, and no doubt you would be likely to get hen Skylarks, too. Only this spring I saw a brood of Blackbirds, and one was quite perceptibly larger and more forward than the others, yet I considered it a certain hen. Possibly its more forward development was a mere accident of birth. For all this, however, I am not going to say that you will not be wise, if you want only one bird, to select the most forward-looking nestling. You will have little other guide, anyway, for both cock and hen Skylarks are exactly alike when in nestling plumage (as they are also as adults). But you must not overlook this point: Go for the best-coloured of the youngsters—in addition to the most forward—as I fancy they invariably turn out the cocks. Unfortunately this difference is but slight, the cocks, roughly speaking, seeming more yellowish-brown, the hens more greyish-brown. It is a fine point, however. Possibly some kind readers will give their experiences.

Clear Eggs from Goldfinches.

From Goldies, last year's birds, hand-reared, and in breeding condition, all the eggs I have had have been clear. I have cock Canaries in the same room. Do you think they should be out of hearing of the hen Canaries? This is my first year of Mule breding, and I haven't found it so easy as Canary breeding.—A.B.C.

A.B.C.—I quite agree with your conclusion that Mule breeding is not quite so easy as Canary breeding. But much of this rests with one's birds. As every practical Mule breeder will tell you some Finches cannot be induced to fertilise eggs, although seemingly in quite as good breeding condition as others in the same room which fill every clutch. Why this should be so is a mystery no one can satisfactorily explain, especially where the clear-egg getters are known to go through the act of coition. I presume you have seen your Goldies acting their proper part with the hen Canaries? It certainly seems odd that your hand-reared Goldies should prove such failures as stock-getters. I am certainly inclined to think the presence of the cock Canaries in the room has had something to do with it. My own experience led me to banish cock Canaries from my own room. The hen Canary's natural instinct must be to fall in love with a male of her own species. The latter are in breeding condition long before the Finches as a rule, and consequently the hen Canaries are almost certain to form attachments with them, and thus resent the "intrusion" of the Goldies when they are ready to be "married off." When the latter is the case, however, they often let you know it unmistakably by attacking and squabbling with the Finches. If you read an up-to-date book on Canary breeding you will find this tendency to form attachments to birds by voice, etc., dealt with therein. You have yet time to try a last nest, and you could remove the cock Canaries, and see if this puts a different complexion on things. To be sure of the hens "calling" to the Goldies (presuming you are not satisfied on the point) you could take in a cock Canary and hang him in front of the breeding cage just as the hen is beginning to build, and when he bursts into song she is almost certain to at once "call"—then the Goldie, who, of course, will be along with her, should accept the invitation. If he does not, then the clear eggs may be his fault. Keep out of sight yourself when trying this dodge.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Birds for Cage.

How many Foreign birds can I keep in a cage 3 by 2 by 1 ft. that will breed? What diet and nesting accommodation must I supply? Will Red-billed Weavers breed, and how can I tell the sex?—PERCY.

Percy.—When attempting to breed Foreign birds in cages, it is a safe axiom to say one pair only, and I certainly do not recommend more in your cage, and a cheap, pretty, and interesting pair for you to commence with would be Zebra Finches, these would be almost certain breeders, and only cost you 3/6 to 4/6 for the pair; their treatment is very simple, see reply to R.R.C.A. in last issue, you will find there full details as to food and treatment. Red-billed Weavers are most indefatigable weavers of their quaint nests all over the cage or aviary, but for them to attempt to sit or rear young is rare indeed. During the summer season the male dons a nuptial robe, when his black mask and rosy orange underparts will readily distinguish him from the female, her garment being the same all the year round, mostly brown streaked with darker.

Finches and Waxbills for Cage.

(1) In my cage, 4 by 2 by 3 ft. high, I have ten Finches and Waxbills. Will it hold another three pairs Waxbills? (2) Is it usual for both sexes of Java Sparrows and Avadavats to utter the song? (3) Do green Avadavats have a seasonal change of plumage? (4) Would enclosed sketch of site be suitable for outdoor aviary?—AMATEUR.

Amateur No. 100.—(1) You have sufficient in this cage already, but if you pay strict attention to cleanliness you might perhaps add a pair of Zebra Waxbills. (2) No, yet such cases are not uncommon. At the same time I have never personally come across a singing hen Java Sparrow, she is usually a very silent member compared with her mate. I have known many cases in which the female Avadavat has sung almost as well as the male, but the majority of females have little more than a single note. (3) The green Avadavat has no seasonal change of plumage, but the plumage of nearly all species assumes an added brilliancy and lustre, if nothing more, during the breeding season. (4) The enclosed sketch would answer well enough if you provide a snug and well-lighted shed for retirement, but if you can provide another site down the garden giving an almost or full south aspect, that would certainly be the better. However, if the plan as sketch sent is more convenient, and the house would partially shelter the front of aviary from north winds, it would answer very well indeed. Make it as large as possible, and do not overcrowd it with birds.

Procuring a Talking Parrot.

Please advise as to the best talking Parrot? Also as to whether to get a young one or an acclimatised bird? As I am a novice, can you recommend a good book on same?—MID-SUMMER.

Mid-Summer.—You will require either a Grey or Amazon Parrot, as these two head the list of the talking species, the Grey being the most fluent of all the talking Parrots. The Amazon is the easier to acclimatise and keep in condition, but if you procure a healthy and acclimatised bird, a Grey is not difficult to keep, once it is acclimatised. I certainly recommend you to get an acclimatised and talking bird; you will have to pay a good price, but it will be cheaper in the end. Losses are very numerous among newly-imported Greys. If you read the replies on Amazon and Grey Parrots for a few weeks (there have been many such replies during the past month), you should not be in doubt as to how to feed and treat. Two useful books are "The Grey Parrot, and how to keep it," and "Popular Parrakeets," both by Dr. W. T. Greene, and procurable from the Editor of CAGE BIRDS. I think their cost is 1/- each, plus postage.

Grey Parrot Breathing Hard.

I procured my young bird three weeks ago; it is moulting, and is troubled with running at the nose, and breathes heavily. It will only eat boiled maize as yet. How must I treat?—A. J. PALMER.

A. J. Palmer.—Continue to supply the boiled maize (it only keeps fresh one day) till you find it eating the seed mixture; to induce it to eat the latter, keep the tin half filled with same and put the boiled maize on top; also supply ripe fruit, plain biscuit, cuttlefish, and water to drink, not continuously in the cage, but permitting it to satisfy its thirst three or four times a day. For one day only put half a teaspoonful of Dinneford's Magnesia over its boiled maize, and repeat the dose after an interval of three days—this may be repeated as often as necessary to keep the bowels moving freely, but must not be permitted to become watery loose. Spray its nostrils with diluted glycothymoline, and get from your chemist the following mixture:—Ipecacuanha wine, oxymel of squills, and glycerine in equal parts; put half a teaspoonful of this in one tablespoonful of water, and let it have only this to drink till the breathing becomes easier. The best seed mixture is two parts each canary and oats and one part each wheat, dari, hemp, and sunflower seed.

Cutthroats Sitting on Linnet and Canary Eggs.

The birds are in an aviary 11 by 5 by 7 ft. high. Will they be likely to rear the young if hatched, and how must I feed?—T. UMPLEBY.

T. Umpleby.—You would have stood a better chance of rearing the Linnet and Canary Hybrids

if you had put the eggs under Canaries. However, the case is not by any means hopeless. If any young are hatched out, supply the usual diet—canary, white and spray millet, green food, and while they are feeding the young, a little soft food daily—say, crushed Osborne biscuits, crumbled sponge cake and best ants' eggs, in equal parts and made crumbly moist for use. Do not examine the nest too frequently, and when doing so let it be in an unobtrusive manner, and only when the birds are off.

Budgerigars Killing Young.

Thanks for reply in last issue. Herewith are particulars asked for:—(1) Size of cage 3 by 1½ by 2½ ft. bigh, fixed against wall 2 ft. from the ground; there is nothing else in the room. There are no signs of mice or insects. It contains three cocks and five hens. (2) What size aviary should I require for six pairs (or four pairs)? (3) Would Budgerigars and Canaries agree and breed in the same aviary? (4) Is there any good work published on breeding Budgerigars?—AIGFURTH.

Aigfurth.—(1) Your cage is not half large enough for the number of birds you have, and the inequality of sexes is quite sufficient to account for the disasters and ill-luck you have had. Two pairs at the most should be kept in this cage, and then the young removed as soon as able to fend for themselves. At least, after the trouble you have had, I should catch up all but one of the nesting pairs—cause as little excitement as possible in doing this, but at any rate the odd females must be removed, and at most two pairs retained in the cage. (2) It is not merely space for the six pairs that is required, but also space for the young; it is quite possible to have at least a score or more young leave the nest at once from such a number. In an aviary 4 ft. deep and of suitable height, 1 ft. of frontage should be allowed for each breeding pair. This only provides space for the young while they are being tended by their parents. (3) Canaries and Budgerigars have been kept together, but the practice is fraught with danger, and periodically scalped and maimed birds are the result, and I cannot recommend it. At any rate, they must not be at all crowded, fully the space in reply (2) must be allowed. (4) You would find Greene's "Popular Parrakeets," 1s. 2d., post free for this office, helpful.

Wintering Foreign Birds.

I am enclosing sketch and full particulars of my outdoor aviary, with list of birds it contains. Will they safely go through the winter out of doors? There appears to be a terrible waste of food. Can this be avoided? I have seen a large rat near aviary. How can I get rid of these.—FAIR VIEW.

Fair View.—I gather that one of the wire netting sides of your aviary is open to the east; if so, I should certainly have a wood and glass made, which could be placed in position during all cold weather, more particularly during easterly winds, and I should cover in another three feet of the roof by putting a glazed sash over the wire netting. With these precautions all the birds you name, excepting perhaps the Red-faced Lovebirds, should safely pass the winter. The use of self-feed seed boppers helps to keep seed down to a minimum, but with pairs of Quails, Ground Doves (say Diamond, Picui, and Indian Green-winged), the waste should not be so great, as these birds mostly feed on the seed the other birds scatter about, but I am afraid a rather large percentage of waste is unavoidable. As regards the rats, the use of rat Virus, advertised in CAGE BIRDS, will keep these pests down. I presume you have carried wire netting down into the floor for eighteen inches or so, so as to act as a check to them burrowing into the aviary. Virginian Creeper will do the birds no harm; several prominent aviculturists have it growing largely inside their aviaries. Some time during the year, the series of articles now running in CAGE BIRDS on "Housing and Keeping of Foreign Birds" will be published in book form; this will fully cover your need. Bechstein's "Cage Birds" is useful. Apply to the Editor, "C.B."

Building Outdoor Aviary.

I am about putting up an outdoor aviary 22 by 3½ by 8 ft. high, with an inner compartment for cold weather. Is enclosed sketch suitable? Can I keep a pair of Pheasants with English and Foreign birds, and what kind do you recommend?—FIDO.

Fido.—Your proposed aviary should be a great success. You make no mention of its aspect though. The front of it should be as near south as you can get it. The brickwork foundation will be ample, as you suggest, but I certainly recommend you to let them have access continuously to the inner compartment, and put up many of your nesting receptacles therein; it will be better for them in every way, and they will mostly use it at nights. Put up plenty of twiggy branches (pea sticks answer well) all round the walls, and the same in the inner compartment too, but keep the centre of inner and outer portions fairly open. I think the Pheasants would be all right, but I consider a pair of Quails would be more satisfactory; several species are really handsome, and all of them are very attractive, the Chinese especially so, and very small too. A larger variety is the Californian Quail, also very handsome, and there are several small handsome African species too. Confine the British birds to Goldfinches, Bullfinches, Brown Linnets, and Siskins. While as to the Foreign, put in pairs each of the Orange-cheek, Zebra, Grey, and St. Helena Waxbills, Yellow-rump, Zebra, Ribbon, Chestnut, Ruficauda, Pectoral, and Gouldian Finches, Bronze, Black-headed, White-headed, and Tri-colour Mannikins, Grey and White Java Sparrows, Grey and Green Singing Finches, Diamond Doves (very small), and Pekin Robins. The above would form a very beautiful and varied series, easy to keep in condition and not very costly to purchase.

Finches, etc., with Budgerigars.

Would it be safe to put Zebra, Fire, and Lavender Finches, Waxbills, etc., with Budgerigars, in an aviary 15 by 3½ by 6 ft. high? Would they winter in the aviary, aspect S.W. During cold weather and at night I could put up a shutter. Shall I let the birds live together or separately?—NEMO.

Nemo.—An aviary for the purpose you require, viz., to winter out of doors such as Fire Finches, Cordon Bleus, Lavender Finches, etc., should have a well-lighted and weather tight shed at one end, with a door opening into flight, and one third of the roof of flight should be boarded in, the whole of the front and remainder of roof to be covered in with ½ in. mesh wire netting; the portion of the front corresponding with the boarded portion of roof of flight should be glazed outside the wire netting. In such an aviary you could winter all the birds you name. Your present aviary, so far as I comprehend its construction, would not afford sufficient protection for Lavender and Fire Finches and Cordon Bleus, even with the addition of a shutter in bad weather. It is most unsafe to keep Budgerigars with Finches, Waxbills, etc. Some do it for a considerable period, but in an aviary with a floor area of 300 ft., my losses were so numerous last year that I had to make a separate enclosure for Budgerigars and Parrakeets. Budgerigars are very fond of mauling and maiming young nestlings the first day they leave the nest, when in a measure they are helpless, and I have had many annoying losses therefrom. I cannot advise you to keep Budgerigars with Finches, etc. You could keep such as Cardinals and birds of similar calibre with your Budgerigars, providing you don't overcrowd.

Amazon Parrot with Diarrhœa.

A week ago I bought a Green Amazon, which appeared healtby, active, and tame. Yesterday it began to retch and vomit, and its voidings are very liquid, and it has taken little or no food. What is the remedy?—E.C.S.

E.C.S.—Put the bird on the following diet:—For the present give it a little boiled maize daily (this only keeps fresh one day), also prepare a seed mixture consisting of two parts each canary and white oats, and one part each wheat, dari, hemp, sunflower, and Indian corn, well mix and keep up a regular supply; a little ripe fruit and plain biscuit should also be given. For a few days put 4 drops of aromatic sulpburic acid to each ounce of the drinking water; remove and destroy the bird's droppings at once. Keep it warm, quiet, and out of draught, yet not in a stuffy corner of the room. For one day only put one teaspoonful of Dinneford's Magnesia over its boiled maize; also stir 2 drops of laudanum and a pinch of prepared chalk into one tablespoonful of water, and give this direct to the mouth, or rather beak, say once daily for three days. Follow the above treatment with a course of Parrish's Chemical Food till the bird is in condition again. As soon as the diarrhœa yields it will be well to give a little green food, nuts, raw carrot, and a small piece of boiled potato, so as to provide a varied diet. As soon as the bird has recovered its appetite it will be sufficient to give the boiled maize twice a week.

Senegal and Zebra Finches.

(1) Can you name a pair of Finches, called by dealer Senegal Finches, from description herewith? (2) Will they agree with Zebra Finches, and are they free breeders? (3) What is tbe correct diet for Zebra Finches?—J.H.

J.H.—(1) Grey Waxbills (*Estrilda cinera*). It is a native of Africa, being very common in Senegambia and Equatorial Africa. (2) Yes, unless the cage be a very small one, and then not unless the Zebra Finches attempted to nest, when they would keep the Waxbills to the opposite end of the cage, and possibly harrass them a little. As regards plumage, the sexual distinction is very slight, but if both your birds are adult, and one of them is more lustrous in its plumage than the other (this should be the male), you have a true pair. They are not free breeders, not even in large outdoor aviaries; a stray brood now and again is about all they have reached so far, and this appears to apply to all the Waxbills, the St. Helena being the one which is most ready to breed in captivity. On the Continent they have been more successful, and they have been bred both in cages and aviaries. (3) This is very simple, and will apply equally to both the Grey Waxbills and Zebra Finches. Canary, brown, white and spray millet, green food, grit, cuttlefish, and water for drinking and bathing. When they have young to feed, a little soft food (crumbled sponge cake, ants' eggs, and dried flies, equal parts) should be given just crumbly moist. If you can procure the green food (grass in flower, while procurable, is about the best), covered with green fly or any form of blight, it will be very wholesome for the birds and tend to keep them in the finest condition; or the blight may be gathered with a camel hair brush from any kind of non-poisonous shrub and vegetable growth.

Sexing and Breeding Budgerigars

(1) How can I tell sex? (2) What food should be given while they are feeding young? (3) Will they breed in a cage; if so, what size should it be?—PARTICK BUDGERIGAR.

Partick Budgerigar.—(1) By the cere covering the nostril, which is bright blue in the male, and ruddy brown or buff in the female. This distinction is very marked when they are in breeding condition, and the veriest tyro need not err in sexing adults. (2) Canary, white and spray millet, with a few oats twice a week. You must also supply green food (grass in flower is the best, let them have as much as they will eat, lettuce stands next), cuttlefish, grit, and water. When you notice them pairing up, crush up what egg shells are left from table and mingle these with sand, or merely scatter them over sand tray. (3) Supply oats daily when they are feeding young, also a dry crust of stale household bread. Liberal supplies of grass in flower (grass in the ear) should be given at this period. The above is in addition to the ordinary diet.

Avadavats, Lavender and Fire Finches.

(1) What is the correct diet? (2) Can they be kept together in same cage? I have one pair of each.—FOREIGN BIRDS.

Foreign Birds.—(1) Canary, white, brown and spray millet, a little soft food mixture, equal parts of crumbled sponge cage, ants' eggs (best), and dried flies, in equal parts, and made crumbly moist is as good as any. You must also keep up regular supplies of grit, green food, and water for drinking and bathing. Also keep a piece of cuttlefish hanging in the cage. See reply to J.H. In this issue as to green food and minute insects; these latter are not really essential, but they are very wholesome, and tend to keep the birds contented and in finest condition. (2) Yes, if your cage is not smaller than a Crystal Palace type cage; if your cage is of this type you must stand it where a draught cannot pass through it. These little birds kept in all wire cages soon go off, simply killed by draught. Waxbills and the smaller Finches when confined in cages frequently pluck on another's heads bare. About the only remedy is to remove the plucked birds and cage them separately till their feathers have grown again. You might try making the feather of the bead and napo distasteful with quassia solution.

Taming Grey Parrot.

My bird was purchased three months ago. Have got it on the seed mixture all right. It is very wild. How can I tame it? I am keeping it in a box cage 2½ by 1½ by 1½ ft. Is this suitable?—ESPERANTO.

Esperanto.—I can only suggest being very quiet in your movements when cleaning the cage or supplying food, and if you have any young people do not permit them to rush about in its vicinity. At the same time, keep it in your ordinary living room where it will have plenty of company and gradually get used to one and another. Talk to it frequently in a quiet tone, and in time it will get over its wildness. I expect the rough handling, noise, and bustle they have to endure during importation is largely responsible for the scared condition they arrive in, and with some individuals if is not very easy to eradicate, but gentleness will gradually overcome this. If it screams there is no better method than covering the cage up while the paroxysm is on, but the cover must be put quietly and gently (not hurriedly) over the cage, otherwise you will only aggravate the complaint. Certainly your box cage will do to keep it in, and at present will be better than any other, as it will give it more privacy. The moult, particularly the first one, in this country is frequently very protracted with many species of Parrots. Put it on a course of Parrish's Chemical Food for a month at least, giving clear water to drink once a week. The drinking water should be made tbe colour of pale port with the Chemical Food.

Parrakeets and Budgerigars.

In my outdoor aviary, consisting of shed and 7 ft. flight, can I keep an Indian Ring-necked Parrakeet with Budgerigars and Cockatcels? If not, what other species could I put in?—A BIRD LOVER.

A Bird Lover.—You can keep other Parrakeets with your Budgerigars, but taking into consideration the size of the shed, into conjunction with the size of the flight, when all the birds are breeding you have not much spare space. In such an aviary I cannot advise you to put in the Ring-necked Parrakeet, though in larger aviaries they have been kept with Budgerigars and many other species of Parrakeets without any mishap. You could put a pair of Rosella Parrakeets in with the Budgerigars and Cockatcels with perfect safety. These are handsome, showy birds, and would look well in comparison with the others.

What Bird?

(1) Body, light slate, tail and head, black, white patches under eyes, and pink beak. What kind of Finch is it? (2) Will they breed, and what is their treatment?—A.C.

A.C.—(1) It is a Grey Java Sparrow (*Munia oryzivora*). It is a native of Java, Sumatra, and Malacca. (2) Yes, but not so readily as the white variety, though ultimately they will settle down and bring up a brood, but not always during the first year. The best way to get a free breeding strain is to pair up a white hen with a grey cock; their progeny would be free breeders, and the hens paired up with imported Greys would throw nearly all pure Greys, and what few birds are pied are usually very handsome. Diet: Canary, white and spray millet, paddy rice (rice in the husk), green food, grit, cuttlefish, and water for drinking and bathing. They will require a little soft food mixture when feeding young. See reply to "Foreign Birds" in this issue. A Hartz travelling cage makes a good nesting receptacle, from which you must remove the fittings, and cut out two of the bars, so that the birds may have ingress and egress. Hay and long grass will be all the nesting material they require.

Budgerigars Moulting.

(1) The first egg was laid on June 23rd, when may I expect young? She is moulting. Will this affect the rearing of the young? (2) Is this the time they usually moult, as all my three pairs are doing so? (3) My aviary has only a wire front, with wooden roof, back and ends. Is this sufficient protection from London fogs?—B.S.F.

B.S.F.—(1) Somewhere about July 9th or 10th you should have young in tbe nest, which they will not leave till they are four or five weeks old. Sometimes this would affect the rearing of the young, but I have not found it so with these birds as a rule, if she hatches out. I should say she would successfully rear them. (2) Most Budgerigars are either moulting or just about through now. They need no special treatment so long as they appear well. Supply plenty of cuttlefish and grass in the ear, and if they should appear ailing, make the drinking water just saline (for one day) with Epsom Salts, and put them on a course of Parrish's Chemical Food till they are through the moult. (3) It would be advisable to have a wood and glass shutter (mostly glass) made, which would leave only one foot frontage of the wire netting exposed; this could be closed each night during the winter, and also in the daytime during severe weather, letting it only remain open during genial and open weather.

Other Birds with Budgerigars.

(1) I have a 6 ft. sq. lean-to greenhouse with a 9 by 5½ flight attached containing two pairs Budgerigars and one pair Madagascar Lovebirds. What others can I keep with them? (2) One of the cock Budgerigars appears ailing—sitting about in a lumpy manner. I have had the birds six months. How can I treat?—C.H.

C.H.—(1) One pair each Cockatcels, Red Rosellas, and Passerine Parrakeets. If adult birds are procured they should breed with you next season; many Parrakeets do not settle down to breeding the first year. (2) It would be better caged up for a week or ten days (not in a small cage) or till better. Make its drinking water just saline with Epsom Salts for one day, following this by a course of Parrish's Chemical Food. Crush some cuttlefish and sprinkle on sand tray, and supply as much grass in the ear as it will eat. During the summer months you cannot supply too much of the latter to your Budgerigars and Lovebirds, also a little fresh lettuce.

Breeding Ribbon Finches.

Can I breed these indoors? What kind of nest box and material do they require? How must I feed and treat?—H. SOUTHERN.

H. Southern.—Yes, these will breed in either an outdoor aviary or roomy box cage. Hang up in one corner a Hartz travelling cage (any dealer will supply you with one for a few coppers); take out the fitting and cut out two of the bars, so that the birds can get in and out, push in a little hay, and supply the birds with hay and long grass, and all should go well, but note they are late breeders, and it may be quite late autumn before they hatch out. Diet: Canary, white and spray millet, cuttlefish, green food, and a few ants' eggs; when they are feeding young supply a little soft food—crushed Osborne biscuits, ants' eggs, dried flies, and crumbled sponge cake in equal parts; make crumbly moist for use.

Waxbills and Budgerigars.

(1) I have five Orange-cheeked Waxbills. Should they have a daily bath winter and summer? They are fed on white millet. Is that correct? (2) One of my Budgerigars died from egg binding. I treated with sweet oil, but she died. What more could I have done? (3) A Yellow Budgerigar has hatched out three eggs; she appears out of sorts, and her cere is getting pale. How shall I treat?—DORKING.

Dorking.—(1) Supply canary, white and spray millet, green food (grass in the ear, etc); keep a piece of clean cuttlefish hanging in the cage; occasionally give a small piece of sponge cake, and scatter a few ants' eggs on sand tray. Offer the bath daily, but in winter weather it is best to have the bath standing in the room a couple of hours before permitting the birds to use it. Their restlessness (though they are active, vivacious little birds) rather points to their cage being infested by insects; if such is the case, it must be baked or scalded, for the birds will never thrive while they are being worried by these pests. If any insects have got on the birds, they must be lightly sprayed with Quassia solution. (2) It all depends how far the bird was gone when you gave the treatment. Holding the bird's vent over a jug of hot water would have probably given relief; but prevention is better than cure with this annoying complaint. Supply old mortar rubbish and crushed egg shells on their sand tray or aviary floor. (3) As the bird has young on hand, you can only make the drinking water just saline with Epsom salts for one day, and follow this by lightly colouring it with Parrish's Chemical Food. Supply also a little lettuce and as much grass in the ear as they will eat. A few crushed oats will lighten her labours in feeding the young.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Young Blackbird (11, Moorside-road).—Sudden "chill," or acute inflammation of lungs and liver, possibly caused by changeable temperatures.

Canary (R. T. Campbell).—Acute inflammation of bowels and liver. Green food should not be served to the youngsters in the flight cage except the weather be very hot.

Lavender Finch (A.M.M.).—Chronic disease of liver. It would be prudent to decline the purchase of any such bird deficient in head and neck feather. It is a sure sign of liver disease or parasites.

Three-weeks-old Canary (C. F. Bilson).—Inflammation of liver, lungs, and spleen, all the symptoms of "bird fever"; not often seen in chicks. There is no cure. (See answer to J. H. Cawood in last issue)

Canary Cock (W. Rudkin).—Death caused by "bird fever." As you have had this bird in your possession only 12 days it is quite certain your previous losses are not attributable to him, but he might have become infected while with you. Please read last week's answers. (Copies of Dr. R. H. Clarke's standard book on bird fever can be had from this office, post free, 7d.—ED. "C.B.")

GENERAL.

Answered by the EDITOR.

Stratford Report (E. H. Waddell).—The report you forward deals with the Pigeons only, and therefore is not suitable for our columns.

Aviary Query (Fair View).—We cannot trace receipt of your query previously. Are you quite sure you addressed it correctly? An answer appears this week.

Report (J.B.).—Many thanks for your kindness. We utilise the report this week. As regards the letter, however, we regret we cannot see our way to insert this.

HASTINGS U.C.B.S. OUTING.

A few days ago the members of the Hastings United Cage Bird Society had their summer outing, journeying by brakes to Sandhurst, Kent, the route being through Sedlescombe and Hawkhurst, which is one of the prettiest drives in Sussex, arriving at the Swan Hotel, Sandhurst, about 1.30. They were met by the host, Mr. H. Ormonde, who is one of the vice-presidents of the society, and he had provided a splendid repast for them. After dinner a few speeches were made, Mr. Sanders, late of Ramsgate, being in the chair. Mr. Ormonde said it gave him great pleasure to be one of our vice-presidents. He had been a fancier for over 30 years, was one still, and he hoped that now the two societies had buried their differences and joined together, we should have the best society and finest show on the South Coast, seeing that we had upwards of 85 members, and so many good fanciers amongst them. The chairman also remarked on the pleasure it gave him to be with them. He had every hope of their making their show a success. Mr. Godden, on behalf of the members, returned thanks to Mr. Ormonde for the excellent manner in which he had catered for them, Mr. Ellis presided at the piano. The return journey was made by way of Robertsbridge to the Royal Oak, Whatlington, where tea was awaiting us, and we arrived home about 9 p.m., after a most enjoyable day, with perfect weather.

A. E. GODDEN, Hon. Sec.

GLASGOW SOUTHERN O.A.

Monthly meeting held in the National Hall, July 1st. In the absence of the President, Mr. G. Gray, through bereavement, the Vice-President, Mr. John Renwick, occupied the chair, and, in opening the meeting, referred in feeling and touching terms to the sad bereavement which had overtaken their esteemed President, in the loss of his wife, a lady who was not only a loving wife, but also for many years took a deep interest in this association, by frequently presenting valuable special prizes for competition. Her kindly and affectionate disposition towards those who had the pleasure of her acquaintance endeared her to all, and her friends were many. He also stated that a wreath had been sent, with a suitable inscription, from the members of the association. The Secretary was instructed to send a letter of sympathy and condolence to Mr. Gray and his son in their sad bereavement. The Secretary also read a letter which had been received from the President, Mr. Gray, acknowledging the receipt of the wreath. It read as follows:—"Please convey to the members of the club my most sincere and grateful thanks for the beautiful memorial wreath they so kindly sent. I assure you that their action and sympathy has deeply impressed me in my sore trial and affliction. With kind regards.—Yours truly, G. Gray." Mr. Marr sent his resignation, intimating his intention of giving up the Fancy at a near date. Mr. McQuillan said that his motion made at a previous meeting, of making the time limit a month or so earlier than what had been the custom, would in a great measure tend to lessen the number or resignations. This seemed to meet the views of the majority of the members present. He also suggested that during the winter months, along with papers read, questions of interest might be put at each meeting, for discussion among the members, so that those members who did not feel inclined to give papers might get these questions of all round general interest from time to time. The Chairman took the census of young birds bred this season, which, when totalled up, gave an average per member of a shade over four young birds each. The result was considered very satisfactory. A vote of thanks to the Chairman brought the meeting to a close.

R. JOLLIFFE, Sec.

GREAT HORTON GOOD INTENT.

Held June 29th, at the Church Schools, when Mr. J. Wilman made the awards, and gave general satisfaction. This was the second of a series of First Feather Shows. YELL. YORKS.: 1, Chubb; 2, Oldfield. BUFF: 1, Holden; 2, 4, Schofield; 3, Kay, Birbeck; vhc, Riley; hc, Ketteringham. TKD. YELL.: 1, Holden; 2, c, Riley; 3, hc, Firth; 4, Kay; vhc, Birbeck. BUFF: 1, hc, Holden; 2, 4, Firth; 3, Ketteringham; vhc, Chubb; c, Kay. CINN. MKD. YELL.: 1, Firth. BUFF: 1, 3, Oldfield; 2, Holden; 4, Firth. A.O.V.: 1, Atkin.

LEICESTER C.B.S.

A most successful First Feather Show was held on June 22nd, at Hare and Pheasant Hotel. Mr. E. Noakes judged, and his awards gave the best of satisfaction. Upwards of 80 birds were staged, the quality throughout was very good. The awards were as follows:—NOR. YELL. (11): 1, 3, Lawrance; 2, Stevens; vhc, Edwards; hc, Heighton; c, West. BUFF (7): 1, 2, 3, Edwards; vhc, Stevens; hc, Heighton. NOR., A.O.V. (10): 1, Smith; 2, 3, Lawrance; vhc, Edwards; hc, Gray; c, Heighton. MULES (7): 1, Clarke; 2, 3, Archer, vhc, Heighton; hc, Whitmore; c, West. NOVICE NOR. YELL. (16): 1, vhc, Claypole; 2, hc, Harrison; 3, c, Moore. BUFF (9): 1, Claypole; 2, c, Lowe; 3, vhc, Clarke; hc, Burbidge. NOR., A.O.V. (10): 1, Claypole; 2, Burbidge; 3, Curtis; vhc, Wood; hc, Holmes; c, Harrison. BRIT. FINCH (6): 1, Collins; 2, 3, Archer; vhc, Lemon; hc, West; c, Heighton. LINNET, ETC. (5): 1, Moore; 2, Heighton; 3, Collins; vhc, West.

ROTHERHAM.

Rotherham C.B.S. held its Annual Nest Feather Show on June 29th, at Wheatsheaf. Considering the bad breeding season many fanciers have had, the entries turned up well. The Yorkshires were a show in themselves, Messrs. Greenfield, Oakes, Bagnell, and Stringer showing some very nice birds. The Norwich were only moderate; Messrs. Hunt and Turner put some good stuff down. The attendance was good all day. Mr. G. Browning judged, and his awards gave every satisfaction. YORKS. CL.: 1, 3, vhc, hc, Greenfield; 2, Oakes. TKD.: 1, Bagnell; 2, 3, vhc, c, Greenfield; hc, Pearson. NOR. CLEAR: 1, vhc, Hunt; 2, 3, Turner; hc, Woodhouse; c, Bagnell. TKD.: 1, Turner; 2, 3, Hunt. NOVICE, YORKSHIRE: 1, vhc, Hincheliffe; 2, 3, hc, Woodhouse. OLD BIRDS, YORKS.: 1, Stringer; 2, Hayes; 3, Greenfield; vhc, Pearson; hc, Oakes; c, Hincheliffe. NOR.: 1, Turner; 2, Bagnell. BRIT.: 1, Hunt; 2, vhc, Bagnell; 3, Hincheliffe.

METROPOLITAN ASSOCIATION OF C.M. & H.B.

This society's Young Bird Show proved one of the largest held in the neigbbourhood, there being nearly 100 entries. There was a very fair attendance of visitors, and amongst the ladies were Mesdames Cooper, Tindall, Gill, Peck, Kearney, and McGregor. The principal winners were: Mr. J. Peck, who secured the half-guinea for best bird in the show with a smart well-shown Yorkshire; the silver watch went to Messrs. Cooper Bros., buff Norwich, a bull-dog type of bird; the lady's bag was captured by Mrs. Gill, with a stylish Yorkshire of promise; and the silver plate for best foreigner went to Mrs. Kearney's Black Nuns. Mr. J. Robson judged, and catalogues with the awards printed in the margin were on sale at tea time. NORWICH CL.: 1, two spls, Cooper Bros.; 2, 3, vhc, hc, Kearney; c, Smith. A.O.V.: 1, spl, Cooper Bros.; some were here wrong classed. NOVICE NOR. CL.: 1, spl, 2, 3, vhc, hc, McGregor; c, Sawyer. A.O.V.: 1, Sawyer; 2, 3, vhc, hc, c, Portell. YORKS. CL.: 1, three spls, 3, vhc, hc, Peck; 2, Best; c, Humphreys. A.O.V.: 1, 2, vhc, Best; 3, Humphreys. YORKS., NOVICE: 1, two spls. 3, vhc, Mrs. Gill; 2, hc, c, Head. A.O.V.: 1, c, Head; 2, vhc, c, Gill; c, Arnold. BORDERS: 1, 2, 3, Honeysett, a nice trio. A.O.V. CAN.: 1, 2, 3, Martin, all Lizards. MULES: 1, 2, Best, old winners. LINNET: 1, Honeysett; 2, Allison; 3, Smith. GOLDFINCH: 1, spl, Peck; 2, Arnold; 3, Mrs. Tindall. FOREIGN: 1, spl, 2, Mrs. Kearney, Budgerigars and Nuns respectively.

ACCRINGTON C.B.S.

First Feather Show June 29th, at Central Conservative Club—members' show. There was only a poor entry, it having been a very bad breeding season. The quality of the exhibits was very good, and some of them ought to be heard of again. Mr. A. Hirst won the Ribgy Challenge Cup for best three birds, and Mr. W. Dormer the Leeds Challenge Cup for second best. The same gentlemen won the specials for most points in Norwich and Cinnamons respectively. Our President, Mr. J. Smith, won the special for most points in Yorks., and Mr. J. W. Philpott special for most points in British. Mr. A. Taylor won special for best bird in Gift. The following are the awards:—NOR. YELL.: 1, Hirst; 2, Wade. BUFF: 1, 2, Hirst. TKD. YELL.: 1, Wade. BUFF: 1, Hirst; 2, 3, Wade. GREEN NORWICH: 1, Dormer. YELL. YORKS.: 1, Smith; 2, Reddy; 3, vhc, Ferguson. TKD. BUFF: 1, Ferguson; 2, Smith. CIN. MKD. YELL.: 1, 2, Hirst; 3, Smith. BUFF: 1, Smith; 2, Ferguson; 3, Dormer. GREEN YORKS.: 1, 2, 3, Haworth. BUFF CINN.: 1, Dormer. GIFT: 1, Taylor; 2, Dormer; 3, Haworth; vhc, Ferguson. BRIT. HARDBILL: 1, 2, 3, vhc, hc, Philpott; 4, c, Smith.

PENDLETON AND SALFORD O.S.

The First Feather Show of this society was held on June 29. The entries were smaller than is usual at this fixture, chiefly owing to the bad breeding season, and the first round of birds being rather too old and the second nest not old enough; nevertheless, a few good birds were staged. Mr. Jackson, the secretary, carried out the work satisfactorily, being supported by a few good workers in Messrs. Hindley, Stringer, and Brennan and others. Mr. S. Cook judged, his awards being well received. YORKS. YELL: 1, 2, 3, Lindsay. BUFF: 1, Lindsay; 2, McCann. TICK. YELL.: 1, 2, McCann. BUFF: 1, McCann; 2, 3, 4, Stringer. NOR. YELL.: 1, 3, Hindley; 3, Boswell. BUFF: 1, Hindley. A.O.V.: 1, 2, Fish. GOLDFINCH: 1, Hindley; 2, Millar. A.O.V. BRIT.: 1, Jackson; 2, Richardson. MULES: 1, Whalley. NOVICES, YORKS. YELL.: 1, Aspinall; 2, Fisb; 3, Cassin; 4, Holland. BUFF: 1, Williamson; 2, Jackson; 3, Aspinall; 4, Cassin; vhc, Ashton. TICK. BUFF: 1, 2, Aspinall; 3, Cassin; 4, vbc, Jackson; hc, Cassin; c, Millar. TICK.: 1, Boswell; 2, 3, Whalley. Special best Novice Yorks. and best vhc Yorks. and most points, Aspinall; most points (Open), Lindsey. Other specials were won by Messrs. Jackson, Cassin, Lindsay, McCann, Hindley.

LAISTERDYKE B.F.A.

The above society held their second First Feather Show in the medal competition on June 29th. About 70 birds competed for points and specials. Some previous winners in the open shows were staged. Mr. C. Stebbings judged, and gave every satisfaction. Results:—YORKS. YELL: 1, 2, Moreament; 3, Bracewell; vhc, Jones; hc, Langford; c, Bottomley. BUFF: 1, Casey; 2, vhc, Padgett; 3, Bracewell; hc, Hudson; c, Langford. TKD. YELL.: 1, 2, Hudson; 3, Bottomley; vhc, Pownall; hc, Jones; c, Langford. TICKED BUFF: 1, Padgett; 2, Langford; 3, Bottomley; vhc, hc, Casey; c, Moreament. CINN. MKD. YELL.: 1, 2, Bottomley; 3, vhc, Parker. BUFF: 1, Bottomley; 2, Parker; 3, Pownall. NOR. YELL.: 1, Bracewell. BUFF: 1, Bracewell. SELL., 10s. 6d.: 1, Padgett; 2, Bracewell; 3, Casey; vhc, Hudson; hc, Moreament. NOVICE, YELLOW: 1, Taylor; 2, Hiles. BUFF: 1, 2, Shoesmith; 3, vhc, Swaine. TKD. YELL.: 1, Swaine; 2, Taylor. BUFF: 1, Taylor; 2, Shoesmith. UNEVEN OR FOUL: 1, Shoesmith; 2, Swaine; 3, Hiles; vhc, Swaine. FOUL MARKED (OPEN): 1, Pownall; 2, Bottomley; 3, Moreament. BEST YELL. (OPEN): W. Moreament. BUFF: Bottomley. BEST YELLOW (NOVICE): Swaine. BUFF: Shoesmith.

WIGAN AND DIS. C.B.S.

Annual Show of Canaries (in their nest feather) and British Birds held at the Adelphi Inn, on June 29th. There were 90 entries, which was considered very satisfactory, as the society is only small in membership. Mr. J. Trengove judged in his usual painstaking manner. There was a fair gate, and amongst the visitors were several fanciers from Blackpool, Runcorn, Widnes, Leigh, Liverpool, etc. The open Norwich classes were very strong, both in numbers and quality, as were also the British Hardbills, these being greatly admired. NORWICH YELL. (15): 1, Thompson, beautiful quality, nice carriage, rich level colour; 2, Simpson, another good one, fails to winner in colour only; 3, Abbott, another really grand bird, close up. BUFF (12): 1, 2, 3, W. Dyer (the popular chairman of the society), three very nice birds, but showing signs of coming moult; vhc, hc, Thompson; c, T. Fenny. The second bird wins special for best bird shown by a member. GREEN (7): 1, 2, Hawkes; 3, vhc, hc, Abbott. We could not follow the judge in this class, as we considered the third prize the best, a grand thick bird, lovely colour, in the pink of condition, which will bo heard of again. First and second were slimmer and showing signs of moult—c, Bloor, unwell, died during the day. YELL. YORKS. (8): 1, Cavanagh, nice bird, the winner at Leigh last week; 2, 3, Horn, very fair birds; vhc, hc, Lane; c, Bennett. BUFF (5): 1, 2, Lano; 3, Lycett; No. 4, Bennett, wrong class; hc, Bennett. SELL., 12s. 6d.: 1, R. H. Davies; 2, T. Fenny; 3, C. Crabtree. LINNET (5): 1, Rothwell, a gem; 2, Lightbown, similar bird, fails a little in colour; 3, Senior; vhc, hc, Dyer. HARDBILLS (9): 1, J. Boardman, Snow Bunting, well-known and looking grand; 2, Lightbown, grand Goldie, steady as a rock, rich full blaze; 3, Mort, nice Brambiefinch; vhc, Murry; hc, Miller; c, Smith. A grand class, every exhibit full of merit; must have been a task to separate them. MEMBERS, NOR. YELL. (6): 1, vhc, Simpson; 2, 3, Dyer; Nos. 1 and 2, Crabtree, wrong class. BUFF (4): 1, 2, Dyer; 3, vhc, Crabtree. A.O.V. (5): 1, Lomax, Crest; 2, 3, hc, Simpson; vhc, Bennett. NOVICE: 1, 3, Lomax; 2, Reid; vhc, Vickers; hc, Hilton.

LEIGH AND DIS. C.B.S.

Nest Feather Show held at the Railway Hotel, on June 22nd. There was a fair entry considering the bad breeding season. Mr. J. Trengove (Rishton) judged. John Cavanagh secured the prize for best bird in show, with his clear yellow Yorkshire. The second best went to R. Davies for his Norwich buff; the third best to W. Gaskell, a Norwich clear yellow. NOR. YELL.: 1, 2, Gaskell; 3, Shuttle vhc, hc, c, Davies. BUFF: 1, Davies; 2, Ordish; 3, Gaskell; vhc, Davies; hc, Clare. YORKS. YELL.: 1, Cavanagh; 2, Whittaker; 3, Slater; vhc, hc, Cavanagh; c, Lycett. BUFF: 1, Cavanagh; 2, Lycett; 3, Whittaker; vhc, Cavanagh. BRITISH: 1, Hart; 2, 3, Marsh; vhc, Slater; hc, Gaskell. SELLING CLASS: 1, Gaskell; 2, Davies; 3, Cavanagh; vhc, Davies; hc, Cavanagh; c, Shuttle. GIFT: 1, Davies; 2, Cavanagh. OLD BIRDS, NOR.: 1, Clare; 2, Davies; 3, vhc, Marsh. YORKS.: 1, Slater; 2, Lycett; 3, Parks; vhc, Slater; hc, c, Parks. STOCK BIRDS: 1, Shuttle; 2, vhc, Davies; hc, Shuttle; c, Davies.

NELSON.

The Nelson C. and C.B.S. held their annual show on June 22nd. There were some capital young birds, also some grand British and Forcign birds, considering the bad breeding season; the entries came up to about 80. The British and Foreign birds were much in advance of past years, both in number and quality. Mr. M. Broadley, of Shipley, judged, and his awards met with general satisfaction. Mr. L. Hawkins won the medal presented by the society for the best bird in the show, with a grand yellow Yorkshire, and also the medal presented by Mr. R. Leonard for the best bird shown by a novice. Mr. Leonard won the special for the second best bird in the show, with a very fine yellow Norwich, and Mr. J. England the special for most points. The prize-winners were as follows:—YELL. YORKS.: 1, spl, also spl best in show, Hawkins; 2, Wilkinson; 3, Leonard. BUFF: 1, 2, 3, spl, Leonard. CINN. MKD. YORKS.: 1, 2, spl, Pearson; 3, Wilkinson. YELL. NOR.: 1, 2, 3, spl, also spl second best bird, Leonard. BUFF: 1, spl, Leonard; 2, Pearson; 3, Oates. SELL., 10s. 6d.: 1, spl, Leonard; 2, Roberts; 3, Leonard. BRIT.: 1, spl, 2, Oates; 3, England. FOR.: 1, 2, spl, Holden; 3, England.

MANNINGHAM C.B.A.

This society held their Members' First Feather Show at Headquarters, the Mowbray Arms Hotel, on June 29th. This was the first of the series of four shows for the silver cup and gold and silver medals offered by the society. Great enthusiasm was shown by the members in making a good entry, 96 birds being staged in the seven classes provided. The exhibits throughout were of excellent type and quality. The card for best bird in show was placed on the buff exhibited by Mr. J. W. Battye. Mr. T. Murgatroyd, of Girlington, officiated as judge, his placing of the awards, which are as follows, giving general satisfaction. YORKS. YELL: 1, hc, Kemp; 2, c, Western; 3, Suggitt; 4, Holroyd; vhc, Smith. BUFF: 1, Battye; 2, F. Grange; 3, A. Grange; 4, hc, Hersey; vhc, Huddlestou; c, Varley. CINN. TKD.: 1, 2, hc, H. Grangec; 3, Western; 4, Normington; vhc, F. Grange; c, Newton. UNEVEN MKD.: 1, Bennett; 2, F. Grange; 3, hc, Wellock; 4, Dennison; vhc, Holroyd; c, Clarke and Williams. A.O.V.: 1, hc, A. Grange; 2, c, Newton; 3, Armstrong; 4, Smith; vhc, Varley. NOR.: 1, 4, Ross; 2, hc, Kemp; 3, Dennison; vhc, c, Normington. CLASS 7: 1, 3, Suggitt; 2, Normington.

BOLTON AND DIS. PROGRESSIVE C.B.S.

Held a nice little Nest Feather Show on June 29th, in the "Olinda Cafe." Entries totalled some 50 birds, very fair considering the poor breeding season which the majority of the members have so far experienced. Special prizes for members staging greatest number of exhibits were gained by Messrs. Allen, Bancroft, Langham, and J. and F. Leach in the order named; ditto for most points by Messrs. Bancroft, Langham, Allen and J. and F. Leach, the latter showing a very nice team of Foreign birds, in excellent condition. Special for best Norwich in show (bred 1907) was captured by Mr. Langham's 1st prize clear buff, a splendid youngster, of rare colour and nice size, combined with type and quality. Special for best Yorkshire fell to Mr. Bancroft's winning clear yellow, a bird of rare length, which with luck ought to make a clinker. Special for best in show, any age or variety (exclusive of Nor. and Yorks.), went to same owner's 1st prize Thrush, a grand bird of excellent markings, possessing lovely ground colour, staged in the pink of condition. Special best bird shown by a novice was awarded to Mr. P. Brierley's green Yorkshire. Mr. Wm. Bowyer, of Leckenfield, and his awards were well received. NORWICH CL. YELL.: 1, Bancroft; 2, 3, Allen. BUFF: 1, 2, vhc, c, Langham; 3, 4, Bancroft; hc, Allen. TICK. YELL.: 1, Allen. BUFF: 1, Allen; 2, 3, Langham; vhc, Bancroft. YORKS.: 1, 2, 3, Bancroft. TICK.: 1, 2, Brierley. BORDERS: 1, 2, 3, 4, vhc, hc, c, Bancroft. MULE: 1, Leach. BRITISH: 1, Bancroft; 2, 4, Naylor; 3, vhc, Cleworth. FOREIGN: 1, 2, 3, J. and F. Leach. SELL., 12s. 6d.: 1, Allen. DITTO, 7s. 6d.: 1, 2, 3, 4, Allen.

"CAGE BIRDS" GREAT CANARY BREEDING COMPETITION.

A Boon to the Fancy. £28 Cash in Prizes.

TWO SECTIONS: (1) NOVICES, (2) OLD HANDS.

1. Only Novice Breeders are eligible for the Novice Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907 Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible. (Note definition of "successfully reared" given on Declaration Form.)
5. All stock birds used must be the *bona fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society; or may swear a declaration attested to by two responsible witnesses. Declaration Forms (see extracts printed below) are now ready, and will be sent any competitor post free on application; a postcard will do.
7. From now till the date of the **COMPETITION CLOSING, AUG. 17th,** each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS.
8. The Editor's decision shall be final.

FIVE POUNDS Cash, or Cup to full value, at winner's option, is offered for the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

NOTE.—All entries must be sent in by August 17th.

EXTRACTS FROM DECLARATION FORMS.

FOR COMPETITORS.

I, the undersigned, having entered for "CAGE BIRDS" 1907 BREEDING COMPETITION, hereby make declaration, according to the terms of the said Competition: (1) That this is the first season I have tried to breed Canaries; (2) That I have used this season .....*(state number)*..... Cocks and .....*(state number)*..... Hens, which were and are now *bona fide* my own property; (3) That I successfully reared* by August 13th, 1907, ...*(state number)*..... young Canaries entirely from the aforementioned .....*(state number)*..... stock birds, the said young Canaries being in good health on the said August 13th.

* By "successfully reared" is meant that the young birds are feeding themselves—that is, are requiring no assistance from their parents.

FOR WITNESSES.

We, the undersigned, having read the Declaration of .....*(state name)*..... of .....*(give full address)*..... hereby declare that, to the best of our knowledge and belief, the said Declaration is true in substance and in fact, we having seen the above birds and checked the stated particulars concerning them.

DECLARATION FORMS NOW READY.

CAGE BIRD UNION RULES.

SIR,—I have read the letters re C.B.U. rules with interest. I have obtained a copy of the Arbitration Act of 1889, and after carefully considering the same I am of the opinion that it is practically impossible for the Executive Council of the C.B.U., as at present constituted, to conduct a meeting in strict conformity with the Act. I have arrived at this conclusion after consultation with a well-known arbitrator, also with Mr. Tweed, the Hon. Solicitor to the C.B.U. I therefore most respectfully suggest to the Executive Council of the C.B.U. that they rescind that part of rule 19 that refers to the Arbitration Act. If this does not meet with their approval, I would suggest that at future meetings held under the Act they engage a solicitor to assist them in conducting the meeting in a legal manner, in accordance with the Act. The point that has impressed me most is that, unless the meetings are conducted in the legal manner required, any appellant not satisfied with the award may appeal to the Courts to have the award set aside, and such an appeal would be very expensive for all parties concerned. If rule 19 be revised as I suggest, I am of opinion that a new rule should be framed dealing with the question of costs. It is surely unfair for any man with a grievance against the decision of a district committee to be able to appeal to the Executive Council on payment of a deposit of 10s., and without further liability. If the Executive Council are of the opinion that any appeal has been made without just cause or reason, then they should have power to order the party making a vexatious appeal to pay the costs. Provision might also be made for the Executive Council to decline to hear an appeal from a district committee's decision unless they were satisfied that there were good grounds for such an appeal. This would safeguard the funds of the C.B.U. to some extent, for at present any member can lodge an appeal without just cause, and run the Union into a useless expenditure of some £8 or £10. There is one point that your correspondent has not mentioned, and that is that according to the strict reading of the C.B.U. rules only affiliated societies or registered members have the right of appeal to the Executive Council. An exhibitor who is not a registered member of the C.B.U., signing the usual clause on the entry form, has the right of appeal to the Show Committee, and then to the District Committee, but not to the Executive Council. I believe the solicitor to the Union has ruled that this is so, and non-registered exhibitors would do well to note this.

J. W. RAMSDEN.

MR TYSON'S REJOINDER TO MR. PRETTY.

SIR,—Mr. R. J. Pretty again belabours the point of an affiliated member being able to exhibit at a show in classes provided for open competition, on the ground that he was a member of the society holding such show. He says I have misquoted him, and adds that you reported his explanation correctly (which is identical with my version; see page 489 of June 1st issue). I quoted "Watford" instead of "West Herts" in error, and have already admitted that. All that I can further say on this point is that the C.B.U. rules distinctly and absolutely debar an affiliated member from showing at a non-licenced or unaffiliated society's show in classes provided for open competition, notwithstanding him being a member of that society.

I am grateful to Mr. Pretty for reminding me of the Scots Fancy incident, and quote his letters, which can only go to prove that he also is not only a humbug, but otherwise highly qualified to hold the position to which he has been elected. I will not only quote the letters, but forward the originals for your inspection, Mr. Editor, to show that they are not in any way "cooked." The first is as follows:—

The Scotch Fancy Club,
6, Old Burlington Street, W.,
London, Oct. 16th, 1902.

Dear Mr. Tyson,

Is there time to arrange for the above Club Show at the Aquarium? If so, let me know, so that I can arrange matters. Mr. Brown called on me last night, and said that, as Mr. Dewar was going to judge, perhaps it could be arranged for him to do our classes. Of course, we should pay something extra to do it. Awaiting your reply, and trusting you are well, with kind regards,

Yours truly,
R. J. PRETTY.

P.S.—We have an idea of giving additional prize money.

Subsequently Mr. Pretty interviewed me at my house. The Association had only arranged for two classes, but, in consideration of Mr. Pretty agreeing to guarantee an extra class, I agreed to do so, and in reply to a post-card announcing the state of affairs at the advertised date of closing entries, I received the following reply:—

Dear Mr. Tyson,

Your card to hand. It is simply cruel. I sent a notice to every member that there were only 15 entries in the three classes, and asked them to send on by return. . . . If the classes do not reach the number required (9), cancel them without the slightest hesitation, for if they have not come up to the scratch now, you may rest assured it is no go. I am very sorry; it is enough to give you the "pip." Very busy, or should have written before.

Yours truly,
R. J. PRETTY.

The three classes were allowed to stand, with nine entries in each; entry fees, 54s.; prize money, according to schedule, 90s.; loss on the section, 36s. Nothing further transpired until the time for preparing the balance-sheet, when I wrote Mr. Pretty as follows, dated, as he says, January 14th, 1903:—

Dear Mr. Pretty.—On reference to the notes made at the interview we had re an extra Scotch Fancy class, I note you agreed to guarantee at least that class from loss, and that you might possibly share with the L.C.B.A. the loss on the section. I shall, therefore, be pleased to hear from you re this, as I am sorry to say the show has not turned out the success I anticipated. With kind regards,

I am, yours, etc.,
JOHN TYSON.

By what streteh of imagination even Mr. Pretty can term the above letter a "demand," and one justifying his contempt, passes my comprehension. Suffice it to say that, notwithstanding his previous letters, he never paid a single penny towards the loss, and the loss on the extra class was returned as a bad debt in the L.C.B.A. balance-sheet for 1904. He says he paid the judge extra for judging. What right had he to do that? Did not the L.C.B.A. pay his fee for his services on that day, and should not any recognition be (Mr. Pretty) was prepared to make have been made to the L.C.B.A., whose servant Mr. Dewar was for the time being? Again, what occasion was there for him to pay a judge anything unless he had guaranteed the extra class provided?

He says I am telling a falsehood (that is a long word for such an expression from him) about the late C.B.C. I will readily turn to the schedule:—Handsome gold medal, ditto silver, for first and second most points gained by a member of the C.B.C. or L.C.B.A. As the L.C.B.A. was affiliated, surely the superfluity of the letters L.C.B.A. do not make my statement untrue? Now he tries to fix me by a paragraph I wrote in answer to a "Country Member's" request to give the C.B.U. a chance to settle down. By what more humane process would he propose to relieve any prolonged suffering, and by what more respectful method would he desire to commemorate its memory? I will again state for his edification that I do still believe in the C.B.U., or some such governing body. Even its most ardent admirers cannot fall into ecstacy over its past working, but healthy criticism should sustain it. Perhaps Mr. Pretty, in the fullness of his knowledge and authority, will be able to reply to a previous question, still unanswered—namely, What has the C.B.U. done to warrant such an expenditure on its first year's working? In conclusion, I must absolutely decline to go on any longer with this correspondence, much of which is irrelevant. It would be neither wise nor prudent to say all one knows in the Fancy Press, and Mr. Pretty's opinion of me is quite immaterial and of very little interest to the Fancy.

JOHN TYSON.

THE CRESTED CANARY CLUB AND THE C.B.U.

SIR,—Mr. Greeves now accuses me of "prevarication of the truth." Well, I am content to let his own letters stand as my answer. What could have been his object in writing them, if not to influence other members of the C.C.C.? Mr. Greeves is welcome to write as many as he likes. But he ought not to object to either myself or anyone else who differs from him in opiuion showing up the weak sides of his arguments. I freely admit (why not?) that my own letters "influence towards affiliation." Mr. Greeves seems ashamed to own that his tend to the contrary! If my statements are "veneer," then they ought to be easy to smash. If every fancier "sat on the fence" and waited for societies to become established and do something before joining them, how could they come into existence? What would have been the fate of the Crested Canary Club in the first instance, Mr. Greeves, if fanciers had adopted towards it the uncharitable attitude you advocate towards the Cage Bird Union? I can assure Mr. Tyson that if "convincing" him had been the only object in writing, I should never have penued a single letter.

If Mr. Crisp will refer to my first letter, he will find good reason giveu for my use of a nom-de-plume—to me, that is, and what he himself thinks I am not concerned with. The Editor has my eard. I have indulged in no personalities whatever, except those which any fair-minded person knows were provoked by Mr. Tyson himself. Mr. Crisp, although he in one breath deprecates the practice, in the next pours out a string of abusive epithets. Possibly he is a believer in "preferential treatment" (for himself). Anyway, if he is one who will not work for the good of the whole without getting some "jam" out of it, then the C.B.U. has not much to mourn in his loss.

A COUNTRY MEMBER.

SCOTCH FANCY MODEL.

SIR,—"Advocate for Model," please do not forget I am at liberty to express my opinion on Mr. Wright's photo of Scotch Fancy Canary, and when I reflect on this business concerning this photo, the greater the disgust. You further state the committee worked hard. I say they did not. The majority did not take ordinary interest, let alone do any work. The sub-committee meeting was only attended by four members of that committee, two submitting models (names given in previous letter), and at the next committee meeting to be held the committee did not turn up in time to hold a meeting. Yet "Advocate for Model" would have us believe the committee worked hard. The only members who took their parts were Messrs. W. Hart and T. Smith. I would like to ask "Advocate for Model"—and he evidently resides in Greenock, by his inquiry—how many fanciers he can find in that town in possession of 20 Scotch Fancy, seeing that last year the Derby Show numbered about 17 birds in all? It's not the number of birds one keeps, or possession of this world's goods, that fit men to judge important questions. Your best judge in Greenock, the only time I was at his house, had only three pairs of Fancies; but they were good birds, not other fanciers' diseased, cast-offs. Again, he says they want solid Scotch fanciers to take this business up and carry it through. For my part you can have them; but I shall ever oppose the Wright photo. But why did the committee elect one Englishman aud one Scotchman residing in England on this committee? You say they worked hard, "Advocate for Model." What do you mean hy such a statement? It evidently concerns you greatly as to my whereabouts. Anyway, I am within the reach of CAGE BIRDS, which is quite enough for you to know. I agree with "Advocate for Model" solid fanciers are required to take this matter up. Yes, and I would debar all men who are in the habit of showing borrowed birds, and disqualify for life any man who ever has showed a borrowed bird and judged it, whether in error or not. Advocates would, no doubt, then be required. An advocate is much needed at present to look into the affairs of a local Derby, not a thousand miles away from Greenock, and for your interest, when next in Scotland, will look into this affair. Some clever men, who strive to go the right way, so they say, are done with their eyes open. Yet they appear, "Advocate for Model," to trouble much about other people's business. I confess the few years I have resided in Scotland I have had my eyes opened on cage bird matters. "Piebald," yes, your statement is correct re this letter, and but for an accident it would not have been known to me. The facts are, Mr. Wright, after a visit to Glasgow, learnt the news of this letter from Mr. T. Smith, and Mr. Wright iuformed Mr. J. Hart, of Greenock, who in conversation told me of this letter, and informed me that Mr. Wright had told him. Now, "Piebald," I do not for one moment believe Mr. J. Hart intended to tell me; it was a slip. As I have informed you, I have had no satisfaction in this matter, and cannot find anyone else except those herein named. But I contend the letter should, if the facts are true, have been placed on the table before the committee.

J. HARRISON.

SIR,—I notice a letter from "Advocate for Model." Might I suggest to "Advocate" to prove the truth of his nom-de-plume by showing his earnestness to pen nothing for publication on this question but such matter as may prove, without doubt, his earnest desire to assist, not retard? There is nothing in his letter calling for more special attention from me than what I suggest. "PIEBALD."

DOES VIBRATION AFFECT EGGS?

SIR,—I have had only two years' experience in breeding Canaries, and the above question has been a source of anxiety to me until now, owing to the position of my house, which is situated between a road which is traversed by three heavy motor waggons, to and fro, daily, and within 15 yards of the back door the G.W. Railway sends along fast expresses, including the Irish boat train, travelling 60 miles an hour. The house itself is built on sand, with concrete foundation; but with that a geranium fairly shakes for fully two minutes after a train passes. Yet all the vibration, I may say, has not affected my eggs this year, only having had one unfertile in a nest, which is, I think, a usual thing. The season has been very prosperous with me. The first round the hens would not feed the young (the general complaint in this district). Since then everything has been going well, thanks to the columns of CAGE BIRDS. More experienced persons' opinion and experience on this subject would be of interest.

R. THOMAS.

LONDON BIRD LIFE.

SIR,—It gives me great pleasure to assure Mr. F. Day of the safety of both the nesting Gulls; also to inform him that the successful breeding of these handsome birds, especially this variety, is by no means an uncommon event in our public parks, gardens, etc., under such ideal conditions. Happily for the interested public this particular pair have chosen their nesting site in a prominent position, in full view from the road, immediately behind the India Offices. Whilst looking at them on Saturday last I overheard many expressions of delight from the spectators who witnessed the novel sight (certainly for a Londoner) of the parent bird feeding its young. I can strongly recommend a visit to this delightful enclosure to any of our birdy friends who should be in the vicinity. There is, to my mind, a greater event which takes place at this spot every year. For several years past the trees over the island have been the rendezvous or roosting place of countless numbers of Starlings. It is the greatest meet I have ever witnessed of this description, and I have seen a great number in various parts of the country. From all quarters after the breeding season is over huge battalions of these birds may be seen going through their wonderful evolutions prior to roosting in the trees. One moment flying at a great height, hardly discernible to the naked eye, then a great concerted movement by the whole body, and the next minute we see them wheeling into line over the trees, filling the air with their incessant chatter. And this interesting phenomena in ornithology takes place in our midst—in a London park! The question arises, Do we take our full measure of Nature study that is placed before us through the medium of our parks, museums, zoological gardens, etc.? I am afraid we do not patronise them sufficiently for this object. It is a step in the right direction now that we see such a number of our clubs organising outings, and what delightful reading the accounts of their respective rambles make. I was very much struck with the continued improvements that are going on week by week. This applies to the housing of birds as much as anything. There is a good deal of flight room in the Pheasant enclosures, etc., and this is utilised by the introduction of different species of small birds, both Hard and Soft Bills, Stonechats, Redstarts, Bearded Tits, Swallows, Nightingales can be closely inspected almost under natural conditions. Then we have nearly all the members of the Bunting and Finch tribes. At the time of my visit most of these were nesting. Just the length of my walking stick from where I was standing a cock Linnet was feeding his mate; previously he had sung his love song, and what a melody! It was the vehemence and passion he put into it that drew my attention to his position. The keeper informed me that Goldfinches, in fact, nearly all the Finches, had successfully reared broods last year in the aviaries. Then we have the Small Birds' House. This handsome and well-furnished bequest is being rapidly filled, and I question if there is a better collection of small birds to be found anywhere. True, the inmates are mostly foreigners, but we cannot expect to find our northern and tropical friends thriving in the same temperature. Considering the great number to be catered for, the exotic and delicate nature of some of the species, the mortality is indeed very small. This speaks volumes in favour of the careful management, and I was very pleased with the courteousness of those in charge. I was shown the skins of past gems of the collection, also a Parrakeet in quarantine, which I rescued from a horde of Sparrows a few days before. Passing a tier of cages a familiar song arrested my attention. The frozen canal, with its fringe of alder bushes glistening with frost came back to me in a flash. Tea! L-e-a-v-e-s!! is the Siskins' call note as we know it here in England, and I shall never forget that winter's morn in Hertfordshire, or the large flock of Siskins busy amongst the alders. And yet we have their tropical cousins, with almost the same song, the same cage mannerisms, that peculiar backward tumble from perch to wire roof and back again which my own Siskins love to exhibit being performed by the Columbian and Black-hooded Siskin of Venezuela. What problems are presented to us in bird life! The deeper we probe the greater its mysteries, and withal how absolutely interesting. I fear I have overstepped the margin, but will continue, with your kind permission, another time.

S. R. FULLER.

ANOTHER CRIME LAID AT THE STARLING'S DOOR.

SIR,—In a recent number of the "Scotsman" a correspondent signing himself "M" says:—I regret to have another serious indictment against Starlings. A friend of mine who is a keen observer, and takes a great interest in birds, informs me that a small coterie of Starlings have taken up their abode under the eaves of his house, and are at present rearing their young families. In the immediate vicinity a few Swifts (*Cypselus apus*) have also nested, and are constantly circling round in pursuit of flies, their natural food. A few days ago my friend observed a Swift flying between his house and the one adjacent. A posse of Starlings, who had evidently been lying in wait, darted out, intercepted its flight, and fiercely attacked it. He saw the Swift fall to the ground, and when he picked it up it was quite dead. A few days previously he found in front of his house a Swift in a dying condition. He could not then divine the cause, but now he had no difficulty in solving the mystery. Is this another trait of this otherwise interesting bird? I wonder if any reader can throw further light on the matter?

J. WALLACE.

BIRD-NESTING IN BEDFORDSHIRE.

A Strange Nesting Place.

SIR,—My friend Mr. W. Murrell joined me the other afternoon in a ramble to a lovely spot not many miles from Bedford, our object being the study of birds and bird life in their native haunts. We cycled as far as Cardington, then left our cycles with a friend and started across the fields, until we reached a place that was well studded with trees and plantations—an ideal spot for bird-nesting—and we were not long before being rewarded with a most extraordinary freak of Nature—viz., a Moor-hen's nest, built with coarse rushes and flags, containing ten eggs, and situated in a large hawthorn bush about 5ft. from the ground. I have certainly met with many strange things in connection with my forty years' study of the habits of birds, but this experience is the most extraordinary I have come across, and I can only account for it upon the following reasons:—There is a running stream within a few yards of the nest, but recent floods have caused the brook to overflow; consequently there was no opportunity for Mr. and Mrs. Moor-hen to build their nest in the usual place, by the side of the stream, and this caused them to choose the strange place I have mentioned. I brought away one of the eggs, which I shall be pleased to show to any of your readers who may wish to see it, or I would take them any afternoon to see the nest for themselves. I mention this because it is possible some who read this may probably be sceptical upon the question. We came across a large number of Blackbirds and Thrushes nests, some with eggs and others containing young. One Thrush with young refused to leave the nest until my friend poked her with his walking stick. We also saw a Blackbird sitting on her nest, and could easily have snapshotted her had we brought a camera with us. We next came across a nest of young Starlings up an elm tree, the old ones feeding them as we lay watching them upon the grass. Our next find was a Chaffinch's nest containing five eggs; this bird could also have been snapshotted. Walking down one of the plantations up flew a Woodpecker, but we failed to find the nest. Our next find was a Hedge Sparrow's nest and two Yellowhammers' nests, one containing four, the other five eggs. We also saw a number of Whitethroats, Blue Tits, Fly-catchers, Jenny Wrens, Greenfinches, Linnets, etc., etc. It was an ideal day for the sport, and we both thoroughly enjoyed ourselves, and promised another similar outing before many days are past.

J. C. WILMOT.

THE FERTILIZATION OF EGGS.

SIR,—In a Fancy paper not long ago I noticed a novice asking the specialist whether it was needful for the cock bird to perform the act of fertilisation daily to ensure the eggs being fertile? He replied, Yes, until the third egg was laid. But my experience last year and this year tells me this is not so if the cock is with the hen before the clutch begau to be laid. I found it out by accident. Having paired a cock Goldfinch with a young Norwich hen, every time I was watching them the hen was driving the Goldie about like a Hawk; and, thinking that only clear eggs would be the result, I shut him off from her after they had been together for a week. I put the cock Cnary in with her, and copulation took place many times in a very short period. The second day afterwards she laid her first egg, and laid four eggs in all, the cock Canary treading daily. Now, I was thinking to get a nest of Canaries; but, to my surprise, they were four Mules, and not one Canary. What have other readers got to say?

W. J. SALMON.

PROPOSED C.B.C. FOR NORTH SHIELDS AND DIS.

SIR,—Owing to our not having a cage bird club in North Shields and District, I have pleasure in asking you to put this letter in your valuable paper, for I think there are plenty of cage bird fanciers in the district to form a good substantial club. I hope we shall make it a perfect success. Will all who intend becoming members please communicate with me?

C. B. J. WILSON.

16, Albury Park Road, Tynemouth.

NO RATS SEEN since using Danysz Virus six months ago; see testimonials; Single tubes, 2s. 6d.; three tubes, 5s. Post free from DANYSZ VIRUS. Ltd., Box 74, 52, Leadenhall-street, London, E.C. Harmless to other animals. No inconvenience from dead rats.

MULES—DO THEY BREED?

SIR,—The more one goes on reading, and especially a beginner as I am, the more one gets perplexed, and I find that I am not the only one. I have asked several breeders and they cannot answer me, or at least will not, with any certainty. The question is, What do you mean by Mules, cocks or hens, or both? One keeps on reading Mules will not breed! and on the face of this I enclose you two advertisements from this week's CAGE BIRDS. One offers Goldfinch Canary cock bred winner, the other "Six pointed house-moulted Goldfinch, father four Mules." I want to go in for Mule breeding (Goldfinch-Canary). Now, will the young from same breed again by pairing son to daughter, or will either the cocks or hens from Goldfinch-Canary breed with Canary?

NIL DESPERANDUM.

COAL TAR AS A REMEDY FOR ASTHMA IN CAGE BIRDS.

SIR,—I see Miss Bushnell gives her experience of using coal tar. But may I ask her to tell me where she obtained the coal tar, as I tried a chemist's, also the drug stores; but they could only supply me with oil of tar? Then I went to an oil shop, and they kept it, so I asked the price, and it was 8d. a gallon. Well, I did not want so much, so I had a pennyworth, and I tried it in the bird's drinking water; but failed to see where the milky-white colour comes in. I stirred, and kept on stirring, but it was more like an inky black on top of water, than it was white. I may say that the coal tar that I have is much like this stuff that they are putting down on the roads to lay dust. I have two hens which have both got a touch of asthma, and would be glad to hear of this fine curing coal tar. I should indeed like to profit by Miss Bushnell's experience, if she will kindly reply.

H. REES.

SIR,—I see a correspondent asks where to get coal tar from. Now, when I first wrote you about the cure for asthma, etc., a gentleman inquired through your paper where to buy. I wrote directly after, telling him where he could procure it; but I am afraid my letter must have miscarried, as I have not seen or heard any more about it. The tar I use is merely common tar, such as is used for tarring sheds, and is obtained from gas works. Many builders keep it in stock, and would sell anyone two pennyworth. Of course, it will make a mess of the bottle; but, if used in the following way, it is invaluable as a cure for asthma, wheezing, etc.—viz., drop four or five drops in the drinking water each morning for a week. Hoping this will prove of some benefit to your readers.

JOHN PATRICK.

THE ROUGH-FEATHERED SCOTCH FANCY CANARY.

SIR,—I agree with Mr. Renwick's remarks in his lecture that winners should be smooth in feather. The rough feathers have been all the rage, and there have been some wretched specimens seen. If the Southern Albert would take it in hand, we would soon see the "frills" a thing of the past ages. The rough-feathered Scotch Fancy is a big, clumsy bird, difficult to keep clean, and one that never stands a show season.

A FANCIER.

PARASITES ON CANARIES.

SIR,—I thought my letter in last week's issue would have finished this correspondence for my part; but I should like to give the correct sentence that Mr. Proctor has twisted so well to give a ridiculous meaning of his own. It reads:—"First finding the value of it when I was keeping Larks. I had a great deal of trouble to keep them clean. I used, etc." There is no mention of the species of lice that infested them, and certainly not any ridiculous statement such as he implies. His old cry about powder needs no comment from me, as others have said often enough it will not kill them all with one application. See also Mr. Haddow's cutting in issue of 22nd ult. I washed the infested bird on Sunday last, but only two turned up to see it. One was a novice who is going through his first season. I don't think he will write you, though he was interested and seemed very pleased with the method. I offered a small reward for each live louse they found on the bird, but I had nothing to pay out. They did search for them, I can tell you, and several feathers were pulled out that had lice on them, and carefully examined; but they were all dead. More fanciers would have come but for the rain, as six promised to attend.

R. ALLEN.

SIR,—Seeing Mr. Allen's letter, I thought I would go and watch him wash his birds by the method that he recommended in your paper. The birds he washed were a Norwich hen and a Yorkshire hen. The Norwich had a good many grey lice on her, and I must say that after he had washed her all the grey lice were found dead. Before he started washing the birds he promised me 6d. for each insect I found alive, but, alas! they were all to be found dead in the feathers. I think anybody troubled with this pest would do well in using the same method as Mr. A. I myself shall. I must say that I have been a member of the Bolton C.B.S. for five years, so your readers will see I have had a little experience.

W. LANGHAM.

REPORTED REDPOLL-BULLFINCH.

SIR,—I am pleased to see notes on Scottish Hybrid Breeders by St. Mungo. In the above he states there is not a single specimen of the Redpoll-Bullfinch cross known to exist in the United Kingdom. I may say that I have a hen of this cross, as fine a hybrid as anyone could wish to see.

JOHN DIXON.

MULE BREEDING EXTRAORDINARY.

SIR,—I have a Linnet I bought two years ago. It was caught by net on the Crumbles, near Eastbourne. As I always do with my birds, I gave it its liberty in my living room. It very soon tamed down. Now I allow it to roam about the house where it likes—upstairs and down—paying no regard to doors and windows. It's a champion songster. A short time ago I bought a Canary to mate with it. They paired in three weeks. Result, five eggs; hatched out, two birds; three eggs unfertile. They are both good feeders; they got their babes on so quick that they were out of the nest and flying about on the fourteenth day; three days later they were feeding themselves; on the eighteenth day they both took a bath placed for them on the window sill; at three weeks the hen was sitting again on five eggs. So, within seven weeks, the hen will have hatched out two lots of eggs, and, with luck, I shall have two nestings of young birds on the wing in nine weeks. This is my first atempt at bird breeding. A very good start, isn't it—and Mule breeding, too?

H. GILL.

THE NOVICE DEFINITION FOR THE LONDON DISTRICT.

SIR,—According to the wishes of the meeting held to discuss the definitions of a novice and amateur in members' classes for the London Police area, voting papers have been sent to every secretary for their members. May I ask the favour of every member to show his earnestness in this important question and record his vote in favour of one of the definitions sent out, also to vote for the establishing of a Federation of Societies for London and District, should he be in favour of such?

J. W. RENNIE.

A DISASTROUS SEASON.

Civil Service F.A. Breeding Results.

I find, on making inquiries, that this breeding season has been a most disastrous one for members of the C.S.F.A. Whilst one or two have had very good results up to the present, others have not been able to rear one youngster. Among the fortunate ones are Messrs. R. Dohin and J. Russell. The former, whose space is rather limited, has four pairs of Crests up, from which he has 16 on the sticks, seven about to leave the nest, and one hen sitting on five eggs. Mr. Russell has just on 40 Yorkshires, the majority being on the sticks. Mr. G. Bleach, of Manchester, has 31 Yorkshires on the sticks from 12 pairs, and 11 Norwich from five pairs. Up to the present he has had about 113 eggs, very few being clear; but the hens have refused to feed, presumably owing to the wet season and very cold nights. He is looking forward to better results from the third round. Mr. H. Dancer, who is engaged in breeding Crests and Yorkshires, has only managed to rear one. Mr. H. D. Thickbroom, whose variety is Cinnamons, has only three young about to leave the nest. He has had about 30 hatch out from eight pairs, but they have died about the fifth day. He has five more nests due to hatch during the next few days. Mr. J. Slattery has had a large number of Norwich hatch out, but has had trouble with the hens refusing to feed. He has a hen sitting on four eggs from Canary-Bullfinch, which are due in a day or so. Mr. T. Smith, of Wood Green, has only nine Yorkshires on the sticks and two about to leave the nest. He has also two Linnet-Canary Hybrids, two or three days old; a hen paired with a Goldie sitting on four eggs, three of which are fertile. Another hen, paired with a Greenie, has laid her third egg. Mr. G. S. Barton is among the unfortunate ones, having only three or four young Lizards in the nest, and none on the sticks. Mr. E. J. Voss has not up to the present obtained any Hybrids. His first hen to lay was paired with a Goldie. He gave the nest a good dusting with "Keatings," put the nest back into the cage, when the hen refused to go back on the eggs. He has another hen paired with a Greenie, which has commenced laying. I, like the majority, have come off very badly. My stock is not large, having only six pairs of Yorkshires and two Hybrid pairs. From the Yorkshires I have only managed to secure three, which are on the sticks. I have had 55 eggs; 30 were clear, seven chicks dead in shell. I lost five young during that bitter cold night of May 1st. The others I lost when but a few days old. My Hybrid pairs are Redpoll-Twite and Linnet-Greenfinch. From the latter I have not had an egg, but I've had five from the Twite. She made a nest in half a cocoa-nut shell, which is painted green and lined with a drab-coloured felt. She filled it up with the stems of shepherd's purse and lined it with cow-hair from the ordinary penny nest-bag. I placed two of her eggs under a Canary, and left her with the remaining three. She sat very close for three days, when somehow the Redpoll got out of the cage, which seemed to worry the Twite. She ate one egg and broke another. The other I placed under the Canary, but to-day I find I have only one fertile, which is due to hatch on the 28th. I hope to get one or two more Yorkshires before breaking up. I have one hen sitting on two fertile eggs, due on the 25th, and another on four eggs.

A. WATSON, Hon. Sec.

Eiffel Tower
MILK PUDDING
A 1d. packet makes a delicious milk pudding in ten minutes. Try it. You will be delighted.

THE TYPE OF THE NORWICH.

Southern Norwich P.C.

SIR,—The club's patronage is given to the following shows:—Dulwich, Champion and Novice; L.C.B.A., Champion and Novice; National, Champion and Novice; W.C.O.S., Champion; Hastings United, Champion and Novice; Welsh National, Champion; Bournemouth, Novice. We have one more for Novice section. Will any society (not mixed show) write from eastern counties who may wish us to give our patronage? The type of Norwich could not be settled, as voting was not quite settled with judges, but was passed that the best model be sent on to Norwich Plainhead Club, then forwarded on to Scotland, as soon as I get the result, to try and adopt the universal model, as well as the universal standard, when the clubs can agree on all points. We cannot arrive at any satisfactory working yet for contest between clubs, as there must be a giving way before any hopes can be entertained of members showing their birds under the present conditions asked for by Scottish Plainhead Club. Result of voting:—First place, Mr. Norman 4 (Mr. Lydon 2); second place, Mr. Norman 3; third place, Mr. R. J. Stewart, Glasgow, 3.—F. S. MATTHES, Hon. Sec.

A FEW NOTES BY A SCOTTISH BIRD LOVER.

SIR,—Bridgeton, situated the east side of Glasgow, has a population composed exclusively of the working class. Since travelling facilities have reached their present state people are either in a terrible hurry or lazy. Yet when looking around there is every scope even for one of limited means, to enjoy a nice day in the country. Having changed my clothing, and with my camera over my shoulder, I was all ready to depart; still it was but three o'clock. My Canaries were singing, also my Linnets, and I just wondered how they sang so much then. Could it be Saturday with them, too, or did they know I was going out to see their little fellow-creatures who were allowed to romp as they pleased, while they were imprisoned in a small wire jail? I did not order my chauffeur to be ready at such and such a time, but simply left the house on the carriage Nature had provided. The wind was high and the sun shining, and everything—even in the city—was quite enticing for any out-door recreation. The foothall season being over, many men don't hurry home as they did, but lounge about the pub, thriftlessly wasting their hard-earned cash. Not being gifted of a fine sea or ocean at our door, we have to content ourselves with the river, the Clyde—and only too proud of it we are. Such extremes! When you go down to the mouth of the river and see the big ships, then come up and up, what a marvellous change! Having previously visited where I was now going, I had everything mapped out, so as to waste no time thinking of what to photograph. So, striking off Springfield Road, I was soon walking alongside the Clyde. On the left Belvedere Hospital, and further up an old bridge (it seems to have been used at one time for carrying coals, or such like, as there are old rails crossing it, which seem to have been a long while unused). Passing on the left a large field where many men and women alike are working hard with big rakes, even on a Saturday afternoon, while we are free to enjoy ourselves gazing at them as a picture postcard. Indeed, it makes a very nice impression on the mind of the city bred. On the right you have the river winding its way to the sea, but before reaching it, it has many duties to perform. On the other side of the river are green fields, while the cars can be seen running for quite a distance. All along the way I have those little tyrants accompanying me. Why do they call them tyrants? Is it that old nursery rhyme—

"Who killed Cock Robin?
I, said the Sparrow,
With my bow and arrow—
I killed Cock Robin," etc.?

Well, if that is so, I would ask them to drop it. A little onward and we have Dalbeth. Here everything is charming. There are trees in abundance, and a picnic on the field. Everyone seems to be enjoying themselves. Why shouldn't they? Nature itself has provided sport for them. Everything I see, every sound I hear, strikes me like magic. The trees and hedges are rustling; they are all alive—many living souls resting and singing upon them. Far from the madding crowd, all the birds are in their glory. What charms me most is a splendid Blackbird, on the top of a large tree, making love to his black coon sitting on her nest with four eggs. How considerate he is! Could man not take an example of those affectionate little things? Within an area of 50ft. or so there are a great variety of nests, with eggs in each. I sit down and enjoy a biscuit and cheese which I had thoughtfully put in my pocket. While doing so I gaze with much admiration at these nests, and I am sure they are a credit to both builder and architect. On my homecoming I visit an old shed, an outhouse to an ancient mansion, and on the wall head there are a few nests. In one there are two dead young, but too decomposed to make out what kind they were, or to judge their age. Continuing my way home, in a flooded field six or seven little boys are bathing. Having still one plate unexposed, I will make good use of it by snapping those little kids. Coming back Springfield Road, it is much different from what I left; small groups congregating here and there, seeming never to leave the street, in case of getting lost.

LEESTU.

Several Letters held over.

STILL GOING STRONG

OUR DELIGHTFUL

Picture Postcards OF Canaries, ETC.

Executed in Colours BY

Mr. H. NORMAN.

The most delightful and appropriate Postcards for Bird Lovers on the market.

THE COLOUR FEEDING AND MOULTING OF CAGE BIRDS.

Paper read before the Crewe O.S. on June 8th, and the Potteries C.B.A. on June 15th.

I have much pleasure in acceding to the request of your Secretary for a paper on some subject of interest, and with this object in view I purpose giving you a few hints on "Colour-feeding and Moulting for Exhibition." I understand you have a number of young fanciers amongst you who have recently taken up our delightful hobby, therefore the subject is one that should especially appeal to them, for unless this branch of the Fancy is not properly mastered not much success on the show bench can be expected. Colour, as everyone knows, is a necessity to exhibition specimens, whether they be Canaries, British birds, or Hybrids.

VARIETIES TO BE FED.

The varieties of Canaries in which artificial colour-feeding is essential for success are Norwich, Yorkshires, Cinnamons and Lizards. It is useless exhibiting any of these, however good in type, quality and condition, unless they are colour-fed. Especially is this the case with Norwich. Colour being one of its chief points for which it is judged, this should convince you of the necessity of artificial colour-feeding for exhibition purposes. Get your birds as good in colour as you possibly can; you cannot get them too hot for present-day competition.

Opinions differ as to the effects of colour-feeding on Canaries and cage birds. Personally I have found it beneficial during the moulting season. Birds which I have been colour-feeding have gone through the moult quicker and better than others that have not had any; neither do I find that it affects their powers of song or re-production. It is a noteworthy fact that Norwich and Yorkshire Canaries, which are practically all colour-fed for exhibition purposes, are more numerous than all the non-fed varieties put together, and, with the exception of the Border Fancy, possess a more robust and stronger constitution.

OBJECTIONS TO COLOUR FEEDING.

Many fanciers object to artificial colour-feeding, but in my opinion some of these are more concerned about the extra trouble enforced on them by a course of colour-feeding than the welfare of their birds. In the early days of colour-feeding nothing but cayenne was used, and I can quite believe that it was then injurious to the health of our birds. Times and customs have changed since then, and cold pepper is now generally used for the purpose. This is a vegetable fruit, something like a tomato when growing. There are many colour-food vendors who advertise their goods in CAGE BIRDS, most of whom claim to have the best in the world. Of course, I am unable to say which is the best; but I have had satisfactory results from the use of the peppers supplied by a well-known Lancashire vendor.

HOW TO MIX FEED.

I mix my colour-feed in the following manner :—To one pound of cold pepper add four ounces of hot Natal pepper, four ounces of moist brown sugar (commonly called pieces), and two ounces of best olive oil; this should be well blended together and put in an air-tight tin or covered jar for future use. Some fanciers use the cold pepper only, just as received from the vendor; but you will get better results from the blend aforementioned. The addition of the hot pepper tends to fix the colour and give it a deeper tone; it also counteracts the effects of the cold pepper, which is of a somewhat purgative nature. The olive oil is added for several reasons; it helps the ingredients of the feed to blend together, gives sheen to the new feathers, causes the colour to spread over the whole of the bird's system, and so ensure an even, level colour, which is so essential. The sugar, whilst being nourishing, renders the whole more palatable to the taste.

WHEN TO COMMENCE FEEDING.

The proper time to commence colour-feeding adult birds is just before they commence their autumn moult; for young birds when they are about eight or nine weeks old. Commence by giving a teaspoonful of the colour-feed to one egg and biscuits, gradually increasing the quantity up to three teaspoonfuls, and continue at this strength throughout the moult, allowing each bird one teaspoonful of the egg-food, as prepared, each day. The seed need not be taken away unless you find your birds are not partaking of the colour-food as they should do. In this case a good plan is to take the seed away over night and replace it on the afternoon of the following day; by so doing you ensure the birds consuming a sufficient quantity of the colour-food to bring about the desired effect. A little linseed should be added to the usual plain seed, which will help to give a bloom and finish to the process of colour feeding. Put a small piece of sulphate of iron, about the size of a split pea, in the drinking water about three times a week; this acts as a mordant in fixing the colour, and is also a good tonic.

THE USE OF THE BATH.

A bath may be given with advantage on bright, warm days during the moult. It is very invigorating and strengthening, and assists the growth of the new feathers. It is indispensable for the proper moulting of British birds and Hybrids for exhibition that baths should be supplied freely during this period.

Whilst the birds are moulting it is beneficial to cover over the front of the flight, or cage, with a piece of thin calico or other material which will admit a fair amount of light, yet will protect the birds from the rays of the sun, which act as a bleacher of colour. This covering will also keep them quiet, warm and clean, so that you will be able to exhibit your birds at several shows before they will require washing.

A STRANGE DIFFERENCE.

It is a singular fact that a young Canary comes out of the moult richer and deeper in colour than does an older specimen, yet the reverse is the case with British birds and Hybrids between British birds, which are not seen at their best until they have passed through the second or third moult; so that, if any of you become possessed of a promising young Hybrid or British bird which is deficient in colour, don't discard it on that account, for, with proper care and attention, it is bound to improve with age. Practically all the winning Mules and Hybrids staged at our shows at the present time are colour-fed, and also many British birds; so that, if you are interested in this branch of the Fancy, you must follow suit, or you will not meet with much success on the show bench.

BRITISH BIRDS AND FEEDING.

The varieties of British birds which are considered to be improved by colour-feeding are the Thrush, Blackbird, Cornish Chough, Hawfinch, Bramblefinch, Yellowhammer, Linnet, Siskin, Greenfinch, Bullfinch, and several others which I need not mention. In moulting British birds for exhibition plenty of natural colour-food should be supplied, such as blackberries, privet berries, mountain ash berries, shepherd's purse, etc., in addition to the prepared egg and colour-food. It must be remembered that British birds are bred and reared under different conditions to Canaries, and also need a different diet; so that by supplying plenty of natural colour-food, such as I have mentioned, you are giving the very foods your birds would partake of if at liberty. This brings my paper to a close. If there is any point connected with the subject which I have omitted to mention, I shall be pleased to enlighten you thereon to the best of my ability. I hope this paper will be the means of assisting a few of your novice members in the art of colour-feeding Canaries and cage birds; if so, I shall feel well repaid for the trouble taken in preparing it.

DO you want to know the Names and Addresses and the Successes last Show Season of all the Leading Cage Bird Exhibitors in the country?

FOODS FOR FOREIGN BIRDS WHEN BREEDING.

Some Useful Tips.

By F.Z.S.

It is a notorious fact that most of the commoner varieties of foreign birds of the hard-billed or seed-eating class are extremely frugal in their feeding habits—so much so, that given a sufficient and regular supply of good white millet seed, little else will as a rule tempt them to seek any variety or change. If there is another seed for which they show any preference or choice, it is the spray millet in the bunch, and this certainly proves a very tempting change to a large number of seed-eating foreigners, who appear to revel in picking the seed out of the bunch for themselves, the novelty of doing so being, perhaps, the sole cause of the choice. True, a considerable amount of Canary seed is consumed by these birds, but, in my experience, the choice is quite a secondary one, and it is only after the major portion of the millet is consumed, and the canary becomes, as it were, in the way of an obstruction, that the birds attack it seriously.

READY BREEDERS.

This class of bird which is now indicated is also, as a rule, the readiest to attempt to breed, and is just the class which is likeliest to come into the hands of the ordinary amateur bird keeper, who will doubtless be well acquainted with the general belief that the more variety the bird can have whilst breeding the greater will be the chances of success.

MODIFYING OLD BELIEFS.

This belief, however, requires to be somewhat modified in these days. Formerly, when Canaries and Mules were the principal varieties of birds that one attempted to breed it might have answered well enough, but it scarcely applies with equal force to this great class of exclusive conservatives who simply ignore such tempting blandishments as delight the taste of their more epicurean brethren, and remain staunch and practical advocates of the "simple life." How, then, can one treat such birds on the variety plan when nesting? The answer to this question must, to a certain extent, depend upon the owner, as, by persevering efforts, some of the most extremely frugal birds can be educated to add variety to their diet. For example, one man's stock of Canaries will devour mealworms with the utmost relish, whilst the stock of another fancier would perish of starvation rather than touch one. The explanation of such an anomaly is that one owner perseveres in repeated offerings of an article that is at first rejected, whilst the other probably discontinued his efforts after a second or third failure.

WANT OF EDUCATION.

In dealing with the birds in what one may call an uneducated condition it is evident that one's choice of variety must be limited. Still there are a few things which may be of service and increase one's successes in breeding these birds if properly utilised. Of small foreign birds the Bengalee is perhaps one of the first for the beginner to try to breed. Being already a domesticated variety, a large proportion of the birds will take the usual form of egg food readily. If they do not a little crushed sponge cake, either with or without a sprinkling of moistened ants' cocoons, forms an excellent and attractive substitute. Should this fail a saucer of white millet seed, which has been boiled until soft and drained dry, is very often an irresistible dainty.

A TEMPTING DISH.

The Java, both Grey and White, are also readily tempted with this boiled millet, or a little rice boiled until soft in a good supply of water, so that the grains do not become sticky. Rice in the natural husk—usually known as "paddy rice"—is another favourite which rarely fails to tempt these birds. The Zebra Finch must be dealt with on its merits. Many of them partake of egg food freely, others are just as conservative, but the same foods as are offered to the Bengalee may be given to this species.

PREPARATION OF THE BREAD.

Soaked bread is a very successful food with some fanciers; with others it fails. Doubtless the cause of failure is that it is not properly prepared. A good thick slice should be cut and thrown into a vessel of clean cold water. After soaking for some time take it out and squeeze it in the hands until no more water can be extracted, then break it into a crumbly mass. Many birds will eat it very readily, and it forms an excellent pabulum for rearing young birds, particularly if prepared with a good wholemeal bread. The latter I should always prefer, but any good unadulterated household bread will do. It is of great value for helping Budgerigars and other small Parrakeets to raise their numerous and ravenous broods, as well as many other kinds of smaller birds. I must return to this subject at some other time, as I fear I have already used up too much space.

The Housing and Treatment of Foreign Birds in Captivity.

By WESLEY T. PAGE, F.Z.S., etc.

(*Continued from page* 349.)

TANAGRIDÆ.

TANAGRA.—The genus *Tanagra*, though not as gorgeous or glittering as the genus *Callistæ*, are yet quite as handsome and beatuiful. They are mostly larger in size than the *Callistæ*; thriving upon similar treatment, consume a larger quantity of insects. Their taste for these should be indulged, and there should be no lack of ripe fruit. At times these birds will drop off their perches and die immediately, when apparently in the best of health and condition. However, if fed as indicated, and supplied with a roomy cage, giving space for exercise, the majority are neither delicate nor short lived, once they have recovered from the hardships of importation.

THE BLUE TANAGER (*Tanagra episcopus*).—A pair of this lovely species were sent me about a year ago by my esteemed friend and fellow-cultivator, E. W. Harper, from Guiana. They did not become reconciled in an ordinary flight, 6ft. square by 6ft. high, but on May 1st I turned them into a garden aviary, 30ft. by 10ft.; they quickly settled down at once, and will already take a mealworm from the hand. They have added nothing since being in my possession, and in spite of the cold spells have been called upon to endure, are in very fine condition. The female constantly carries nest material about, and appears a strong probability of their breeding. Adult male: General body colour, pale lavender grey; wings and tail, blackish, edged with blue, the blue more or less suffusing the black; lesser wing-coverts pale bluish white (irridescent), changing their hue like mother-of-pearl owing to light refraction; throat, breast and rump are tinged with violaceous; bill, blackish-horn. Total length 6in., tail 2½in. Adult female: Similar to male, but slightly shorter and thicker in build; her bill is shorter and flatter than that of the male, his culmen being quite arched in comparison; the beautiful bluish-white of the lesser wing-coverts being partially absent in the female except when the wing is expanded; her plumage not as resplendent as that of the male. Total length 5¾in., tail 2½in. Habitat: Rio Janeiro, Upper Amazon Valley, and Colombia.

Tanagra cælestis.—The female very similar to the male, but violaceous tinge much deeper and its area greater; the blue parts not as pure in colour as in the male. This distinction will readily identify the species should they be kept together. There are two subspecies, *typica* and *leucocoptera*, which differ but little between *episcopus* and *cælestis*. *T. cælestis sclateri* is very similar in body colour to the above, but can be distinguished by its shining violet lesser wing-coverts. If living specimens of the three preceding species should arrive in this country they would undoubtedly be offered as either Blue, Pale Blue, or Silvery Blue.

THE SILVER-BLUE TANAGERS (*Tanagra cana*).—Adult male: General body colour, pale lavender-grey, darker on the upper back; wings and tail, dull black, edged with bluish-green; upper coverts, rich glistening blue; bill, dark horn colour; legs and feet, blackish. Total length 6in., tail 2¾in. Adult female: Similar, but greyer and duller in colour, and her bill is broader at the base than that of the male. Habitat: Ranges over Southern Mexico, Central America, Venezuela, Colombia, Ecuador, and N. Peru.

THE GREENISH-BLUE TANAGER (*Tanagra cyanoptera*).—Adult male: General body colour, bluish-grey, slightly washed with greenish on the upper parts; the under surface is paler, middle of abdomen being very pale bluish-grey wings and tail, dull black, suffused and edged with greenish-blue; lesser wing-coverts, glistening blue; beak, blackish-brown; legs and feet, brown. Total length 6½in., tail 2¾in. Adult female: According to the British Museum catalogue she is similar to the male, but duller in colour, and her lesser wing-coverts are greenish blue; her bill also is broader at the base than that of the male. Habitat: Southern Brazil, Paraguay, Buenos Ayres, and Bolivia. (*Cat. B. M.*, Vol. XI.)

Tanagra glaucocolpa.—Very similar to the preceding species, but may be distinguished by its paler underparts, violaceous breast, and greenish-blue lesser wing-coverts; middle of abdomen and under wing-coverts white. I do not know of any instance of this species having been imported alive into this country. Habitat: Venezuela.

THE PALM TANAGER (*Tanagra palmarum*).—If not so brightly coloured as some of its congeners, this is a really handsome bird, usually very tightly feathered, and the plumage covered with a sort of bloom, such as seen on ripe plums, grapes, etc. Prim[illegible] olive green, lighter on the head; wing[illegible] tail, black ish-brown; wing-coverts, mar[illegible]ed with ol[illegible]e; bill, dark horn; legs and fe[illegible] brown. Total length 7½in., tail 3in. The female is slightly smaller, paler on the upper surface, and markings more diffused; her tail is rather longer and broader at the base and her plumage generally lacks the brilliancy and richness of that of the male. Habitat: Southern Brazil, Bolivia, Trinidad, Venezuela, Colombia, Panama, and Costa Rica. The Museum catalogue gives two sub-species—(*a*) *typica*, (*b*) *melanoptera*. The differences, however, are infinitesimal, and the species so variable as a whole, that they are only determinable by a comparison with skins.

WILD BIRD LIFE.

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "The Eyrie," Salisbury-road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

When Nightingales Sing and Nightjars Churr.

The voice of the Cuckoo can still be heard although the summer is passing and it will not be long before he leaves our shores. By this time we are somewhat used to the singing of the migrants, now we must make the most of them, for those that stay with us until the summer is past will soon cease to charm us with their songs. The melody of the Nightingale sounds through the copse more frequently now during the daytime than formerly, his mate is carrying out her duties patiently; his courtship is over, he has no rival to combat, and food is plentiful, so just now he is having a lazy time of it, and fills the intervals between visiting his mate with snatches of song. Although he is so musical during the daylight, he does not neglect to render his bewitching music during the hours of darkness; sometimes it is well past sundown before he commences, at others the shadows are still visible, the sun is sinking, and we are fast approaching that delightful hour of a June evening, when sight begins to fail, and sound vibrates sharply in the still air. The Nightingale, Thrush and Blackbird sing in chorus, accompanied by the lesser Warblers and Finches. One by one they retire, until the "King of Songsters" has the woods to himself. We may sometimes think that the bewitching hour of night lends charm to his song, possibly it does, but none can deny the richness, power, and variety of the melody. It will soon be past. After the young ones appear the Nightingale seldom sings, for he is an attentive parent, and young 'Gales grow fast, and need feeding frequently.

In favoured localities, during twilight, one may hear the song of the Nightjar. This is a dull churring noise, resembling a sound that one may make by vibrating a thin piece of wood, fixed at one end. Although so unlike the song of a bird, it is undoubtedly the song of the Nightjar, for the cock bird alone is responsible for it. This bird winters in Africa, and arrives here rather later than the majority of our Spring migrants. It feeds upon the wing, catching moths, cockchafers etc., during the evening, and doubtless throughout the night, for I have seen one at midnight, and also in the early morning just before daylight. There is no reason why they should not do so, as they rest in the daytime, and are seldom seen upon the wing unless disturbed, and then they soon settle again.

A peculiarity of the Nightjar is the habit of perching lengthwise upon the branch of a tree, quite different to the usual method of perchers. In such a position it is most difficult to locate, for the mottled brown plumage assimilates closely with the local colour of the branch. One may occasionally put a pair up while crossing some rural common land, where the heather and bracken grow abundantly, for these birds seem to be exceptionally fond of such localities, and one may sometimes have the good fortune to find the two marble-like eggs deposited upon the bare earth, or, as I once found them, upon a few chips left by the woodman in the winter.

Head of the Nightjar.

There is no semblance of a nest whatever, even when the eggs are highly incubated, for the hen bird sits lightly. There is no reason why the Nightjar should not increase considerably in numbers, for the young ones are as difficult to locate as the nest, and yet there appears to be no more of them about now than in years gone by. It is one of the puzzles of Nature that, no matter how much some species are protected or left unmolested they never increase. Take the Raven as an example; a pair may be protected for years, and yet no advance can be noted, for although we know the old birds drive the young away from the district, there should be a corresponding increase elsewhere. The Peregrine Falcon has been practically exterminated, but the Kestrel and Sparrow Hawk are daily persecuted and destroyed, yet still hold their own—they refuse to be wiped out.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best drawings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one star the runners up.

* Hand-reared Canaries.

My mother had a pair of Yorkshire Canaries which had four eggs. As luck would have it they all hatched out. When they reached seven days old the hen was taken ill, but continued to feed them to the ninth day. On the evening of the same day my mother found her on the nest, with her wings spread out. Immediately after being removed she died. Finding that the cock would not feed the young mother thought she would try and feed them herself, which she did successfully on hard-boiled egg and cracknel biscuits, mixed in a stiff paste, which was given to them on a little stick every few hours, and by following advice of CAGE BIRDS they have turned out four nice birds, two of them singing beautifully.—HAROLD COOK (age 15 years), 17, Byam-street, South Hackney.

* A Clever Cat.

My father has got a lot of birds, both Yorkshires and Norwich and Lizards. We have also a cat called Smut, and each night we go to the bird room she is waiting to go in and look if there are any mice in the traps which my father sets. She walks under the cages and never touches the birds. Our little Bullie is dead, and I am very sorry, for he won us many prizes.—EDWIN GILBERT (age 8 years), High-street, Tideswell.

[illegible] of Sound Judgment.

[illegible] is a bird of sound judgment, and common-sense. He knows that [illegible] always ready to fall a [illegible] he has learnt that nothing appeals more to the English heart than a confiding nature. Therefore, when the snow falls and food is not easy to find he takes courage in both hands so to speak and boldly enters the portals of his human neighbours, demanding as plainly as possible their patronage and protection. He knows full well that the sight of a helpless little one always touches a weak spot somewhere in that big human heart. Other birds would rather starve than beg, toil and slave all day rather than accept charity, but not so the Robin, who knows from experience the power of an appeal, even if he has not learnt that it is logical fallacy, but that little matters to him so long as the result is the same.—ALICE CUNNEBER (age 12 years), 17, Amberley-street, St. Simon's, Bristol.

A Longing.

My brother has a beautiful coloured plate from CAGE BIRDS of Foreign birds. I think they are better in colour than British birds. There are the Budgerigars, Pekin Robin, Ribbon Finch, Java Sparrow and the Red-crested Cardinal, all of which are very beautiful birds. The one I should like best would be the Red-crested Cardinal, which comes from America. Its beak is broad and thick like that of the Hawfinch, and is well adapted for their seed-crushing habits. The Red-crested Cardinal is a very good songster.—Sent by M. PALFREYMAN (aged 11 years), Cook's Cross, South Malton, N. Devon.

The Cuckoo.

The Cuckoo, Spring's harbinger, has, in all ages, obtained for itself a name at once pleasing and disreputable—pleasing because its well-known notes are a sign that the cold winter is gone, and disreputable because it usurps the nests of other birds, of which the Hedge Sparrow is the usual victim. In its nest the Cuckoo deposits one of its own eggs, which are remarkably small in proportion to the size of the bird.—Sent by COLIN SMITH (age 10½ years), Tansley, Matlock, Derbyshire.

Notes and Queries.

"Looking after the Wine."

Robins have built their nest in the warehouse of a wine and spirit merchant at Trowbridge, in an old wine bottle basket hanging from a beam. Last year the birds hatched out a brood of young, and returned this year to their old quarters, where five eggs have been laid, on which the mother bird is busy hatching. The other day the basket was taken from the beam into the open and photographed with the mother bird on her nest.

Giant Pheasants.

Herr Carl Hagenbeck, the celebrated Hamburg dealer in wild animals and birds, says that he has produced a new breed of Pheasants. By cross-breeding between the European and Asiatic Pheasants, and a careful process of selection, he has produced a stock that weighs three to four pounds heavier than the present European bird. More than three hundred birds of the new breed have already been sent to the Hon. Walter Rothschild at Tring, and more are to follow. Herr Hagenbeck declares that in a few years the game of Europe will be revolutionised if his ideas are carried out.

Avocets Breeding in Captivity.

One of the great attractions of the Zoological Gardens for persons specially interested in British birds is the charming waders' aviary at the back of the lion-house. For some time a flock of Avocets has been kept there. For nearly a century the species has ceased to breed in this country. Recently two of the Avocets in the Gardens paired up and chose a nesting place. Three eggs were laid, the birds began to sit, and after an incubation period of 25 days three chicks were hatched. Two were accidentally killed, but the third is doing well, and it is very curious to see the little fellow taking refuge from some fancied danger between the long legs of its mother. This appears to be the first record of Avocets breeding in captivity. Observations made on the sitting birds show that the statement of Naumann as to both parents taking part in incubation is incorrect; on the other hand, the incubation period of "17 or 18 days," given by him, and echoed by nearly all later writers, is shown to be erroneous.

Deserved—And Received.

For curious cases coming before the County Police Court, commend us to Compton Chamberlayne, says the "Salisbury Times." The latest was about a Tom-Tit. A not very small boy, in company with smaller boys and a girl, made a raid on the nest, hauled out the bird, tied a length of string to its leg, and then swung it round and round until the leg was torn away from the body. This barbaric method of inflicting torture sends a thrill of horror through us. No doubt it was wrought by want of thought, but some sort of instruction ought to be given to the youngsters to have a care for the feelings of dumb creatures. In all probability, the boy who was summoned was not very much worse than the others in the party, but we hope the taste of the [illegible] which by this time has tingled his [illegible] will make [illegible] amongst the [illegible] Chamberlayne. Cruelty [illegible] showing [illegible] culprits [illegible] thought [illegible] ment [illegible]

76 "CAGE BIRDS" ANNUAL.

SCRAGGY CREST: When the feathers forming the crest are short, narrow and deficient in substance. The proper shape and droop of the crest suffers as a natural consequence. See also *Mop* and *Hairy* crests.

SELFS: A term applied to Cinnamons and Greens whose plumage is unbroken by any other colour. It does not, however, imply the absence of the dark pencilling, which is a characteristic of these varieties.

SHEEN: See *Burnished* and *Bloom*. Is also, but inaptly, sometimes used to denote the mealy colour of buff birds.

SHIELD CREST: Indicates that the crest, when viewed from above, is shaped somewhat like a shield, being round in front, widening a little backwards, and terminating in a straight line across the back of the skull. The shield-shaped crest always loses points in competition with a circular shaped crest of equal quality.

SIB-BRED: Birds bred in-and-in (*i.e.*, paired to near relations, brother to sister, mother to son, etc.) for many generations. Such birds are much sought after for mule breeding. If overdone, sib-breeding results in degeneration.

SIDE: Is a term usually applied to the Scotch Fancy, in which the proper formation of the sides of the body is of some moment. The wings should be folded closely and firmly to the body, and the sides of the body appear flat. See also *Long-sided*.

SIX-MARKED: An even-marked bird with six points, viz., marks on each eye, both wings, and each side of tail.

SIX-POINTED: Synonymous with *Six-marked*, which see.

SLACK: A looseness of plumage, generally seen at the thighs. The term is applied to Yorkshires and Norwich and all varieties in which tightness of feather is essential, and where slackness of feather is objectionable as showing a tendency to frilliness.

SLIPPED TOE: Is a crippled condition of a toe, usually the hind toe, more often seen in young birds soon after leaving the nest. The toe curls under the foot, and is directed forward. The method of cure is to take a quarter-inch of india-rubber tubing, such as is used on a baby's feeding bottle, pass it over the front toes, and, keeping the hind toe in the ring, push it up the shank of the leg. The rubber ring may be removed in about a fortnight, but should be replaced at once if the toe again comes [illegible]

SMOKY: This is a term generally applied to Greens. In the former it denotes a want of distinctness between pencilling and ground colour and a smudgy appearance. The same remark will apply to the Lizard, except that spangling loses its distinctness, and has a tendency to merge gradually into the ground colour. See also *Dull colour*.

SNAKY: A term applied to the long, thin neck, and drawn-out, finely cut head and beak of the Scotch [illegible]

SNAKY-HEAD: Is sometimes applied to the well-formed head and beak of Greens, but is more applicable to the finely-chiselled head and beak of Scotch Fancy and Belgian; also the lengthy beak of the Goldfinch.

SNIPPY-HEAD: Synonymous with *Pinched Skull*. Is a narrow skull, giving the head a drawn-out appearance very objectionable in most birds.

SOFT CONDITION: A loss of energy and vitality. May be due to fatigue from over-showing. Birds want a complete rest and a tonic. See *Over-shown*.

SOFT MOULT: See *French Moult*.

SOUR HEAD: A term usually applied to Yorkshires with slightly over hanging eyebrows. It is a bad point. See *Beetle-browed*.

SPANGLED: See *Spangling*.

SPANGLING: The series of small black spots adorning the plumage of the Lizard, and one of its most essential characteristics. The spots should be profuse, bold and distinct, and as black as possible, and be sharply separated from the ground colour. Applied also to the markings of the Starling, Wryneck, etc., and to the markings on the back of the Bramblefinch. See also *Rowing*.
